

COMMITTEE WORKSHOP
BEFORE THE
CALIFORNIA ENERGY RESOURCES CONSERVATION
AND DEVELOPMENT COMMISSION

In the Matter of:)
)
Future of Energy Efficiency,)
Public Benefits Programs)
_____)

HEARING ROOM A
CALIFORNIA ENERGY COMMISSION
1516 NINTH STREET
SACRAMENTO, CALIFORNIA

TUESDAY, OCTOBER 12, 1999

10:08 A. M.

Reported by:
Valorie Phillips
Contract No. 150-99-001

PETERS SHORTHAND REPORTING CORPORATION (916) 362-2345

COMMITTEE MEMBERS PRESENT

Robert A. Laurie, Presiding Member

Robert Pernell, Associate Member

STAFF PRESENT

Laurie ten Hope, Advisor

John Wilson, Advisor

David Abelson, Counsel

John E. Sugar, Manager, Program Planning & Process
Energy Office

Mike Messenger, Energy Information & Analysis
Division

Mike Sloss, Administrative Structure Lead

Seymour Goldstone, Chief Staff Economist

Bruce Cenicerros, Energy Specialist, Program
Planning Office

Donald B. Kazama, Residential Buildings &
Appliances Office

Lynn Marshall, Energy Information & Analysis
Division

Scott W. Matthews, Deputy Director for Energy
Efficiency

Michael Poe

ALSO PRESENT

Manuel Alvarez, Director, Strategic Policy &
Regulation Regulatory Affairs
Southern California Edison
1201 K Street, Suite 1810
Sacramento, California 95814

ALSO PRESENT

William N. Nelson, Director
Public Policy & Regulatory Affairs
Residential Energy Efficiency Clearing House, Inc.,
(REECH)
Public Policy Division
P.O. Box 7530
Stockton, California 95267-7530

Ed Vine
University of California
Lawrence Berkeley National Laboratory
Berkeley, California 94720

Peter Miller
National Resources Defense Council
71 Stevenson Street, Suite 1825
San Francisco, California 94105

Stu Wilson
California Municipal Utilities Association
915 L Street, #1460
Sacramento, California 95814

Marcel Hawiger
The Utility Reform Network (TURN)

Frank Spasaro
Southern California Gas Company
555 W. Fifth Street
Los Angeles, California 90013

Renee Guild
EPRI
3612 Hillview Avenue
Palo Alto, California 94304

Richard Flood
Community Energy Services Corporation
1013 Pardee Street
Berkeley, California 94601

Chris Chouteau, Manager, Customer Energy
Management
Pacific Gas and Electric Company
Mail Code H28L
P.O. Box 770000
San Francisco, California 94177

ALSO PRESENT

Richard Ely
ADM Associates

Mike Rufo
Xenergy
442 Ninth Street, Suite 220
Oakland, California 94607

Chuck Goldman
Lawrence Berkeley National Laboratory
Berkeley, California

Patricia Casseres
Science Applications International
3800 Watt Avenue, Suite 290
Sacramento, California 95821

Lenny Goldberg
The Utility Reform Network (TURN)

Mark McNulty
San Diego Gas and Electric Company
LaMesa, California 91941

Marty Katz
Sacramento Municipal Utility District

Stan Walerczyk
CALEP and Alamo Lighting
936 Detroit Ave., J
Concord, California 94518

Mark Berman, Director of Business Development
Davis Energy Group, Incorporated
123 C Street
Davis, California 95616

Pat Keener
City of Redding
Redding, California

John Berlin
NCPA
180 Cirby Way
Roseville, California 95678

Kathy Treleven
Pacific Gas and Electric Company

ALSO PRESENT

Carnegie Ouye, Jr., Government Affairs
Representative
Sacramento Municipal Utility District
6201 S Street
Box 15830
Sacramento, California 95852-1830

Ann Kelly, Consultant
1842 Divisadero, #5
San Francisco, California 94115

Jay Goth
Commonwealth Energy
15901 Red Hill Avenue, #120
Tustin, California 92780

Mark Reedy
Global Energy Partners
530 Bush Street
San Francisco, California 94108

Richard Flood
Community Energy Services Corp.
1013 Pardee Street
Berkeley, CA 94601

Don Link
Controlled Energy/CALEP
4070 Halleck Street
Oakland, California 94608

2 10:10 a.m.

3 PRESIDING MEMBER LAURIE: Ladies and
4 gentlemen, good morning. Continued workshop on
5 legislatively mandated report to the Legislature
6 on 1105. My name is Robert Laurie, Commissioner
7 at the Energy Commission and Presiding Member of
8 the Energy Efficiency Committee. To my left is my
9 Associate on the Committee, Commissioner Robert
10 Pernell.

11 The issues to be discussed today are
12 budgets and administration. It is important for
13 us to have you not simply respond to thoughts
14 promoted by the Commission, but rather your own
15 thoughts. And the positions of your various
16 agencies and entities so that we know what you all
17 are thinking.

18 We're ready to proceed. Commissioner
19 Pernell, do you have any opening comments this
20 morning?

21 COMMISSIONER PERNELL: No comments, just
22 welcome, everyone, and good morning.

23 PRESIDING MEMBER LAURIE: Thank you.

24 Mr. Sugar.

25 MR. SUGAR: Thank you for coming. This

1 is another in our continuing series of public
2 events and input for our report. Staff is
3 committed to completing a draft of the public
4 goods charge report in very early November.

5 The next event following this is a
6 hearing to discuss the draft report, and that's
7 going to be November 16th. I've gotten that date
8 wrong a couple of times. It will be the 16th of
9 November.

10 Following that there will be a Committee
11 report going to the Energy Commission in very
12 early December, so that the final goes to the
13 Legislature at the beginning of the new year.

14 Staff has a couple of presentations
15 today. The first would be Mike Messenger
16 discussing proposed funding levels. The second
17 will be Michael Sloss talking about administrative
18 structure.

19 In the administrative structure area
20 staff is putting forward a proposal. We're hoping
21 that this will help elicit comments. We're also
22 hoping that people put forward their own
23 proposals, an explanation of the rationale behind
24 them. That will help us understand better what
25 the options are, what are the advantages and

1 disadvantages of the various options are.

2 And with that, Mike Messenger.

3 PRESIDING MEMBER LAURIE: Any procedural
4 questions? Okay, thank you.

5 MR. MESSENGER: I'll start with a
6 procedural question. How many people have had a
7 chance to read either of the two funding papers?
8 One is just a review of historical trends and the
9 other is a review of the factors that we used to
10 come up with the funding recommendation. Could
11 you just raise your hands if you've read either of
12 those papers? That give me an idea.

13 Okay. What I'm up here to do is just to
14 summarize briefly the historical paper. If you
15 have questions, please hold them till the end of
16 the presentation. We're going to have three
17 separate presentations so you should be able to
18 just jump in really quickly.

19 What we're doing today is looking at
20 both the need and the funding levels for future
21 energy efficiency programs, myself and Bruce
22 Ceniceros. And he's going to be the tag team in
23 just a second.

24 First, I'm going to briefly go through
25 the historical trends. And that's really just to

1 give some grounding to the Committee and people
2 who haven't necessarily been aficionados in this
3 area about how much money has been spent over the
4 last ten years and on what types of things.

5 Next Bruce is going to talk about, you
6 know, is there a continuing need for energy
7 efficiency programs or not. What our preliminary
8 analysis has shown.

9 And finally I'm going to come up with a
10 review of funding levels analysis, basically tell
11 you where we are preliminarily in terms of
12 recommending a funding range. And then ask you
13 what you think in terms of what should be the
14 funding for this program, or how we should go
15 about deriving a funding level.

16 First, this is just a graph of energy
17 efficiency programs, both natural gas and
18 electric. And as you can see, probably the low
19 point starting in 1988 at about \$112 million.
20 Collaborative starts in 1989 and 1990. The money
21 goes up to about \$352 million at peak.

22 I should say something important about
23 this. This excludes load management programs
24 funding. And it also excludes low income energy
25 efficiency programs. So this is just sort of the

1 pure energy efficiency programs. Low income is
2 being funded out of a separate charge now in the
3 Legislature, and load management programs are a
4 subject of controversy in terms of whether they
5 should be additional funding for load management
6 in the future.

7 Right now there is none authorized at
8 the PUC. So we're looking for input about whether
9 you think we should fund load management type
10 programs or demand responsiveness type programs in
11 the future.

12 MR. ABELSON: Mike, just a question on
13 the chart. Are those nominal dollars or are those
14 inflation-adjusted dollars?

15 MR. MESSENGER: Nominal dollars.

16 This is, again, all these charts are in
17 the paper. This is just expenditures by program
18 type. The CEC keeps a database and we just take
19 from the utilities annual reports.

20 As you can see, there was a growth, the
21 same kind of growth that we saw in the last chart.
22 The biggest chunk is nonresidential. It's often
23 between 30 and 50 percent of program funding
24 actual.

25 The next biggest chunk is usually

1 residential. As you can see there's sort of
2 resurgence of new construction and then a dying
3 off by the end of this period, or a sloping down.
4 And MA&E, there's a big chunk of MA&E
5 expenditures, between 92 and 94 as the protocols
6 were being developed and a lot of load impact
7 analysis. And that's fallen off in recent years.

8 And here's just a look by fuel type and
9 by administrator. This is for electricity. PG&E
10 tends to be about 50 percent of the state. SoCal
11 Edison between 20 and 30 percent. And the
12 remainder for San Diego Gas and Electric.

13 And you can see all of these patterns
14 are -- they pretty much track, you know, the
15 utilities go up and down in unison. There doesn't
16 seem to be any sort of out-lyers, you know, PG&E's
17 funding going up and San Diego's going down. It
18 seems like there's a general trend. It's what you
19 expect because they're all administered by the
20 same body, the PUC.

21 Here's an interesting chart. This is
22 natural gas programs over time. And here there
23 was sort of a disproportionate response between 92
24 and 94; the funding was increasing more for SoCal
25 Gas at a faster rate than these other two programs

1 in response to the collaborative, you know.

2 Perhaps you can look at it as they were
3 more responsive to the potential for incentives
4 earnings than the other companies, or maybe they
5 just didn't, all of a sudden there was more
6 potential discovered. I'm not sure what the
7 reasons behind that, but it's just an interesting
8 historical fact.

9 And finally, this is sort of the
10 pocketbook question, you know. When I try to talk
11 to people on the street about what I do and the
12 kind of programs I look over, they say, well, how
13 much does this cost me.

14 And on average it's cost people about 1
15 percent of their bills over the last decade to
16 fund these programs. The low is about .5 percent,
17 half of 1 percent in 1988. Right now it's a
18 little bit less than 1 percent in terms of actual.
19 Between 97 and 98 there's a little bit of a
20 counting thing because we're tracking program year
21 spending. And even though a lot of the 97
22 spending actually occurred in 98, it's tracked
23 back to the 97 program year because that's the way
24 the PUC was keeping accounts.

25 Post 1998 the accounting system changed.

1 And if I were to talk to you about 99 you'd see
2 that there'd be a rebound back up. So that's just
3 sort of a weird end effect that had to do with a
4 change in accounting systems about how commitments
5 were carried over.

6 But as you can see, electricity is about
7 .9 percent of annual bills, and gas is about .6
8 percent in 1998. And we don't have updated
9 figures on 1999, but we can get those together,
10 maybe later.

11 So at that point I'm just going to
12 pause. That's really sort of a quick whirlwind
13 summary of this historical funding paper. I'm
14 sure that people are probably more interested in
15 the proposed levels, so I didn't spend much time.

16 Are there any questions on that? If
17 not, I'm just going to hand it off to Bruce.
18 Will.

19 MR. NELSON: Just one. There appears to
20 be a paucity of data for the municipal public
21 board controlled funds programs, a paucity of data
22 for the muni public board funds. One, why is
23 there a lack of data? Two, strongly recommend
24 that such data be included in any legislative
25 report.

1 MR. MESSENGER: Okay, that's a good
2 question.

3 The municipals are not required to
4 report expenditure data to the Energy Commission.
5 Occasionally in the past we've asked for it and
6 they've given it to us nicely. Post restructuring
7 it's been a little bit more difficult to get that
8 data. But I think we could -- if it was an
9 important thing, and I'll talk about it with the
10 Committee, then we could try again, I think, to
11 ask for it.

12 But there's a lot of definitional
13 questions about when you run programs at the
14 municipal area what's an energy efficiency
15 program, and what's a load income program, and
16 that kind of thing. It's not as clear as the PUC,
17 so I think that's maybe part of the hesitancy to
18 report that data. But I can look into it.

19 MR. VINE: Mike, this may relate to some
20 of the discussion that goes on later, but do you
21 have any information on how these previous funding
22 levels were set?

23 I know you looked at the data in the
24 past and you were able to report what has been
25 sent. But how were those levels set? Were they

1 related, for example, to anything regarding the
2 potential of energy savings in the state?

3 MR. MESSENGER: Well, you've asked me to
4 do something that I don't think is possible,
5 except in the level of opinion. So, I'll give it
6 to you.

7 First of all, factually what happens is
8 the funding levels are set by the PUC over the
9 last ten years in sometimes annual, sometimes it's
10 every two, and sometimes every three year rate
11 cases, depending on the particular year.

12 What's tended to happen in those
13 processes is that utilities have a preplanning
14 process where they get input from the public on
15 funding levels and programs and program designs.
16 They come in and present a level to the
17 Commission. Sometimes parties come in and argue
18 for increases or decreases off of that baseline
19 funding level and then the Commission makes a
20 decision.

21 I don't believe the Commission's
22 decisions have ever been rooted in any sort of
23 firm kind of metric like we judge that there's 30
24 gigawatt hours more potential left, therefore
25 you're going to get another \$20 million.

1 I think what they figure is they try to
2 balance a variety of different factors, including
3 the potential for future savings as well as a
4 variety of other concerns brought into the hearing
5 process and reach a level.

6 It's much more of a negotiating process.
7 I don't think it's a strongly analytically driven
8 process in terms of the actual level of funding.
9 I think more the analysis focuses on are the
10 programs cost effective and are the programs well
11 designed.

12 So that would be my answer.

13 Any other questions? If not, I'd turn
14 it over to Bruce. Thank you.

15 Oh, by the way, one other thing I should
16 say. All of the actual data, we print out an
17 appendices, so if anyone really wants to comb
18 through this data we have lots of extra copies of
19 the data that underlies those graphs. And I'll
20 put that at the back table.

21 Go ahead, Bruce.

22 MR. CENICEROS: Okay. I'm going to talk
23 a little bit about this very fundamental question
24 here. Is there a need to continue public benefits
25 energy efficiency programs beyond 2001 at all.

1 You may be wondering why are we even asking this
2 question, since we're so well into this analysis.

3 But we've been working on this all
4 along, as well, and one of the main reasons we are
5 working on this so diligently is because we're
6 required to, in language added by the Governor
7 when he signed AB-1105. Some people refer to this
8 as veto language, even though there wasn't a veto
9 here, but the language basically asks -- and the
10 full language is quoted in your packet for your
11 reference if you're interested.

12 But we need to not assume that the
13 program will be continued, and that there is need
14 for the program without first showing why there is
15 a need. So that's what we're trying to do in this
16 report, as well as -- the appropriate funding
17 level. The answer is yes.

18 And the factors we're considering in
19 determining the program needs are the following:
20 First, we've hired Rand Corporation who has worked
21 with us in the public interest energy research
22 program, to do an independent study. Part of the
23 Governor's language required an independent
24 assessment of the need for the program, so that's
25 how we're accomplishing that. As well as through

1 feedback from you and other stakeholders.

2 And that analysis is basically going to
3 answer the questions what are the drivers that may
4 lead California to a lower level of energy
5 productivity, you know, in the absence of
6 government intervention with these programs.

7 Are there potential --

8 PRESIDING MEMBER LAURIE: The status of
9 that contract, Bruce, as you know, the Commission
10 has approved the Rand contract, but it has to be
11 approved by the Department of General Services.
12 And that has not, as yet, occurred.

13 MR. CENICEROS: Right, thanks for that
14 clarification. It's not a done deal yet, but it
15 is moving forward quickly.

16 Also going to look at the potential net
17 public benefits to maintaining and approving
18 energy productivity through programs such as what
19 we're proposing here.

20 Okay. Other factors that we're looking
21 at in the meantime because we can't wait for this
22 analysis for the answer to this question, are the
23 other three bullets here, but, Mike, did you have
24 a question? Okay. I'll entertain questions when
25 I'm finished here, too.

1 We are looking at the effectiveness of
2 the current programs through the existing market
3 assessment and evaluation studies that have been
4 produced, and assessment of the remaining
5 opportunities for cost beneficial energy
6 efficiency, and the recent changes in the market
7 conditions, and how all those things are affecting
8 the need for continued government funding, at
9 least as programs. I'll just briefly talk about
10 each of those

11 As far as cost effectiveness here, one
12 thing we have is the utilities have been reporting
13 every year their benefit/cost ratios in several
14 different ways, and we're trying to get a picture
15 of what that tells us.

16 As an appendix to the paper that Mike
17 and I put together, we list the cost/benefit
18 ratios for the most recent four years just to show
19 what the trend has been. And they've been
20 positive on the aggregate. Greater than one, in
21 other words.

22 As far as remaining opportunities for
23 energy efficiency, we had a model that we
24 developed several years ago to help us assess the
25 potential for energy efficiency, and we've adapted

1 that model and we're doing computer runs right
2 now -- it's called California resource assessment
3 model -- to look at how much naturally occurring
4 efficiency there would have been up till now
5 without the programs and project that into the
6 future. Look at how much more you get with the
7 utility programs that have happened, and will
8 happen.

9 If that tapers off, if the program's not
10 continued after 2001, and also what would happen
11 if we did continue the publicly funded programs.

12 And also it looks at the effects of the
13 current energy standards, building standards,
14 efficiency standards, and a couple of other
15 factors. So that'll be complete very soon, and
16 the results so far are showing pretty good
17 positive effects of continuing the programs.

18 Okay, so basically our preliminary
19 conclusions -- oops, I didn't talk about the
20 market conditions, here we go.

21 Change in the market conditions. A lot
22 of things are happening now that we didn't really
23 envision, even when AB-1890 was in the works. And
24 some things that we did envision and we need to
25 assess the effects of those things.

1 The changes in prices are probably a big
2 thing. A lot of people are saying with the
3 dropping of prices once the competition transition
4 charge goes away, is going to make a lot of energy
5 efficiency that was cost effective before no
6 longer cost effective.

7 But there are also other opportunities
8 that are arising now that may lean towards meaning
9 more involvement with energy efficiency programs.
10 The bills are much more complex and prices more
11 volatile than they were.

12 And you have this new problem that's
13 been identified, of potential reliability problems
14 in the transmission system that energy efficiency
15 may be able to contribute to the solution of those
16 problems, and those are often localized in nature,
17 as well as on a larger basis. So we're looking at
18 that, as well, when we discuss each of the things
19 I mentioned here in more detail in the paper.

20 So, our preliminary conclusion gives us
21 enough confidence to go forward with all the other
22 recommendations in terms of detail of the
23 administrative structured funding levels. All the
24 results, new points, continuing need for the
25 programs.

1 Where you can help us is to give us some
2 feedback on whether you think our analysis is
3 objective enough, even though the rating study
4 will be coming along later, all these things will
5 come into play when the dealings start going on in
6 the Legislature in terms of whether this program
7 continues and what the funding level and how it
8 continues.

9 Is the methodology that we're using here
10 going to be sufficient to satisfy both the
11 supporters and critics of publicly funded energy
12 efficiency programs, is it going to be rigorous
13 enough. And are there other factors that we
14 should be considering that we haven't yet. So
15 that feed back would be very much appreciated.

16 Does anyone have any questions or
17 comments about this part of the presentation?

18 MR. KAZAMA: Ladies and gentlemen, if
19 you're going to give a comment, they are very
20 important to us, so this meeting is being
21 recorded, so if you would, before you speak,
22 please state your name and organization for the
23 record, thank you.

24 MR. MILLER: Just a comment. There are
25 things I'll direct towards later in your

1 presentation, which is why an assessment of the
2 current program would affect the need for future
3 program funding.

4 If a current program isn't working, that
5 in my mind doesn't necessarily affect the
6 opportunities in the future, more indicate a need
7 for changes in current programs.

8 MR. CENICEROS: Right, but I think --

9 MR. MILLER: I'm sorry, I forgot to do
10 exactly what you said I should do.

11 (Laughter.)

12 MR. MILLER: Peter Miller with Natural
13 Resources Defense Council. Sorry.

14 MR. CENICEROS: Our thought is, Peter,
15 that we need to address whether or not current and
16 past programs have been worth the public money
17 invested in them.

18 And if not, we need to explain what
19 we're going to be doing differently very
20 specifically in order to satisfy critics why this
21 should be continued.

22 Any other questions?

23 MS. TEN HOPE: Bruce, doesn't the model
24 that we don't have the results from yet, isn't
25 that looking at potential rather than historic?

1 That will be another factor that will be used in
2 the final recommendation on the funding levels?

3 MR. CENICEROS: Yeah, that --

4 MS. ten HOPE: And that historic is only
5 one of the factors listed?

6 MR. CENICEROS: Yes, it does. The main
7 focus is potential, although it's based on some
8 past data as well as --

9 MS. MARSHALL: It includes both the
10 historic and the forecast.

11 MR. CENICEROS: Yeah. Thanks, Laurie.
12 Will.

13 MR. NELSON: Will Nelson. I'm providing
14 testimony and questions today as a private
15 consultant. I'm also associated with Residential
16 Energy Efficiency Clearing House. The testimony
17 is not representative of that entity.

18 On the overhead, I don't know if you
19 reviewed it at all, the scope and method of
20 funding collection, it just refers to CPUC
21 jurisdictional customers. Would just be the
22 investor-owned utility service territory
23 customers.

24 As I understand it, the working groups
25 and many of us have been looking to a true

1 statewide market. Is it the approach at this
2 juncture of the staff and the Committee to omit
3 consideration of how a charge is levied in the
4 public territories? Or what consideration has
5 been made thus far?

6 MR. MESSENGER: That question is part of
7 the last presentation, but I'll answer it now.
8 It's our belief that -- utilities are doing a good
9 job right now in running their own programs. And
10 there's no need right now for us to consider
11 making this a statewide charge.

12 However, I would not consider it beyond
13 the pale or outside the realm of possibility if
14 the Committee came back to us and said, look,
15 there's a lot of reasons why we want to have this
16 statewide for all utilities as opposed to just
17 investor-owned utilities, either for efficiency
18 reasons or equity reasons or whatever.

19 But in the past that has been a
20 difficult task, and the staff is just right now
21 not recommending going there.

22 MR. ABELSON: One comment, Michael, I
23 believe in AB-1890, however, there is a provision
24 requiring the municipals, as a matter of law,
25 basically to match the equivalent level, although

1 it's not -- programs that was allocated. Is staff
2 going to, for equity reasons or otherwise, at
3 least recommend that that sort of parity continue?

4 MR. MESSENGER: It's our belief that
5 that parity would continue regardless of what
6 happened. I believe it's in the statute for post
7 2002 right now, but I would recommend continuation
8 if that's an issue.

9 COMMISSIONER PERNELL: Excuse me, do all
10 of the municipals have a standard procedure
11 statewide, or is it each municipal do their own
12 thing?

13 MR. MESSENGER: Each municipal does
14 their own thing. Some of them work together in a
15 group and they publish an annual report, I
16 believe. It talks about what kinds of programs
17 were funded by their members. But it's still left
18 to the discretion of the local board to decide,
19 for example, what's the definition of a public
20 utilities program, despite the energy efficiency.
21 All those things are left up to the discretion of
22 the boards.

23 Stu, you probably --

24 MR. WILSON: I guess it's time for me to
25 speak up. I'm Stu Wilson from the California

1 Municipal Utilities Association.

2 The provisions of AB-1890 were as
3 described, really. They put a kind of a formula
4 in the statute, a little bit obscure, but we
5 wrestled with it, came to what I think is a
6 reasonable conclusion about trying to calculate a
7 level of funding which was intended to track
8 overall the level of funding that was spelled out
9 in AB-1890 for the investor owned utilities.

10 And I agree with you, my interpretation
11 of that is that if funding levels going forward
12 beyond the specific requirements of AB-1890, going
13 past 2001 were adjusted up or down, that that
14 would be a controlling factor in the formula for
15 the funding levels for the municipal utilities.

16 Now, there may be people who read the
17 law differently, but that's, I agree that that's a
18 reasonable interpretation of the law. And it is
19 true that the total funding level is established
20 in state statute. The allocation of the funds
21 between various types of programs is left to the
22 discretion of the local ratemaking authority for
23 the municipal utilities. Some tend to emphasize
24 low income programs, perhaps more than others,
25 depending on the community that they serve.

1 And I would just comment on one other
2 thing, you know, that the statute that sort of
3 gave impetus to this report and directed the
4 Energy Commission to report back really was
5 looking, I think, at the transfer of
6 responsibility from the Public Utilities
7 Commission to the Energy Commission, which, I
8 think, leaves the municipal utilities sort of
9 outside the scope of that legislation.

10 COMMISSIONER PERNELL: Stu, does your
11 association track who's doing what for public good
12 from the municipal side? Is anyone tracking that
13 at all?

14 MR. WILSON: To my knowledge there's not
15 a sort of formal systematic mechanism in place for
16 trying to do that. We have, in our association,
17 which includes nearly all but not every municipal
18 electric system in the state, a committee upon
19 which sort of the program manager type folks
20 serve.

21 And that committee has periodically
22 tried to collect information from the members,
23 CMUA members, and prepare reports on our
24 activities. But I don't want to represent that
25 that is, you know, uniform, or that the data is

1 entirely consistent, or that it's complete by any
2 means, because it's really not.

3 COMMISSIONER PERNELL: Thank you.

4 MR. MESSENGER: Okay, we'll go into the
5 last stage here in terms of the punchline. What
6 funding level should we recommend, if any.

7 Well, what staff sat around and talked
8 about, well, what should we do for trying to come
9 up with a level -- I'm sorry -- coming up with a
10 level.

11 We looked at basically five or six
12 things here. First, it's kind of obvious, the
13 funding level would depend on what are the future
14 policy goals of this program. If they're going to
15 change a lot, you know, if we're going to abandon
16 market transformation and just work on the
17 liability. Or if we're going to go back to
18 resource acquisition, or whatever, that would have
19 implications for the funding levels.

20 Second, we think it's important to look
21 at the trends in program funding level because
22 they give you an indication of how the whole
23 market and the system might be able to adjust.

24 My opening hypothesis is it would be
25 very difficult to have a radical change from the

1 post trends, you know, either a huge increase or a
2 huge decrease would be difficult for the system to
3 maintain. And it would have probably dislocating
4 impacts to the whole industry if you were to go
5 way up or way down.

6 We also need to know, and we haven't yet
7 gotten -- maybe we'll get to there this afternoon,
8 what are the resource requirements of this
9 governance and administrative structure. Are they
10 more or less than the current resource
11 requirements for the governance and administrative
12 structure.

13 And that's a difficult one because in
14 some cases the costs aren't explicit, you know.
15 The PUC, for example, has costs of right now
16 governing the system, but we have no idea how big
17 or small that is.

18 Similarly, the utilities have an
19 administrative cost of running the current set of
20 programs which are not very clear. And if you
21 look in their annual reports, exactly what's
22 administration and what's implementation is
23 currently under debate.

24 But hopefully we can get that so we have
25 a pretty good idea of what the -- you know, how

1 much money it takes to fund both governance,
2 administration, evaluation and implementation of
3 these programs.

4 The fourth major category is we're
5 interested in the recommendations from the
6 stakeholders and we're going to include those in
7 our report, you know. What do various parties
8 think would be a reasonable level.

9 And finally the relative cost burden.
10 We talked a little bit about that already on
11 different customer classes, you know, is it .5
12 percent of your bill, 1 percent of your bill, is
13 that an acceptable level. You know, do customers
14 seem to be willing to pay for these programs? Is
15 there any evidence that they're willing to pay 1
16 percent of their bill. Is that fine with them, or
17 is that too much, too little. So those are the
18 general categories.

19 Um-hum, go ahead.

20 MR. RUFO: Mike Rufo, Xenergy. I was
21 just curious as to why some of the -- a couple of
22 the items that were on the factors considered for
23 program need aren't under here for determining
24 funding levels such as the assessment of remaining
25 potential and its cost effectiveness. And such

1 things as externalities and market barriers.

2 MR. CENICEROS: Want me to answer that,
3 Mike?

4 MR. MESSENGER: Yeah, go ahead, Bruce.

5 MR. CENICEROS: They are. They are. On
6 paper we say that in addition to the three we
7 looked at for funding level, for the need for the
8 program, here are some additional ones. Ones that
9 Mike just showed. So, we're looking at those, as
10 well as the others.

11 MR. MESSENGER: And basically my answer
12 would be I wasn't sure whether those other
13 analyses were going to be finished on time, so I
14 just went with the ones that I was reasonably
15 certain.

16 Now, I'm going to just sort of, assuming
17 you read the paper, jump to the bottom line. And
18 if this is too much of a leap in faith, then just
19 stop me.

20 Basically in the paper we tried to look
21 at things from various perspectives and the only
22 two things that we were able to complete is to
23 look at it, well, what if the policy goals were to
24 change, what would the range of funding be that we
25 could support.

1 And, secondly, what would the historical
2 trend analysis support.

3 And when we looked at policy goals we
4 could support anywhere from 150 to 280 million,
5 depending on our -- and that's basically based on
6 our belief about what types of programs are
7 currently being funded.

8 And some of the key decisions that the
9 Committee's going to have to make is are we going
10 to recommend, for example, funding for what I call
11 load management or demand responsiveness programs
12 in the future. Is there a need to do that.

13 There's a separate study going on with -
14 - and the Energy Commission and -- to determine
15 what should be done with demand side, if anything
16 to do with -- reliability profits. Does that need
17 to be funded, is there a public benefit to that.
18 You might need to add something on top of just --
19 program. So that's why that range is so large.

20 In terms of, you know, if you -- range
21 of funding over the last decade, you could support
22 any number between 161 and 352 million depending
23 on, you know, where you thought you wanted to land
24 in that range.

25 The last five-year average is about 260

1 million, -- 276, actual in 1980 was 180, so those
2 are all data points that we could use in trying to
3 figure out what would be a reasonable level.

4 Just to give you some historical
5 perspective, the last time the funding levels were
6 set they were basically -- this is what the PUC
7 has authorized -- legislation. So that's another
8 criterion you can use, just the current level of
9 authorization, throw that in without any critical
10 analysis up or down. So that's another option.

11 Basically staff hasn't got to the point
12 where it's able to sort of balance on these
13 factors and come up with a bottom line, but if I
14 were to guess, staff is probably somewhere between
15 200 and 250 million as a bottomline after we weigh
16 these additional factors that Mike was talking
17 about in terms of remaining potential.

18 We're interested in getting parties
19 comments about, you know, is that the right number
20 to use, that type of thing.

21 MS. ten HOPE: Mike, the historic
22 numbers exclude load management, right?

23 MR. MESSENGER: Correct.

24 MS. ten HOPE: Do you have an estimate
25 of load management expenditures?

1 MR. MESSENGER: Historically -- first,
2 they're in the paperwork. Historically I think
3 it's the 216 and 40 million over the last decade
4 statewide on load management programs.

5 And I think in the paper we said that we
6 could see anything from zero to 50 million
7 depending on the severity of the transmission
8 constraints. If, in fact, there were some short-
9 term sort of focused resource acquisition programs
10 that could be run to reduce load in specific
11 geographic areas. And whether or not --
12 definition of energy efficiency, what I call load
13 responsiveness devices that could help the local
14 transmission people cycle down load during time
15 criticality time periods, in return for some rate
16 reduction.

17 You know, if we were to go -- that could
18 be up to 50 million. And like staff said, we
19 still see that there's a possibility that we'll
20 decide that zero is needed, that they will be able
21 to work it out themselves through some other set
22 of -- bids, or a variety of other things that
23 might not need public funding.

24 MS. ten HOPE: And when you're making a
25 recommendation that you could go with anyone of

1 those, based on historicals, is the recommendation
2 including load management? Or is the load
3 management on top of --

4 MR. MESSENGER: Load management would be
5 on top of.

6 MS. ten HOPE: Okay.

7 MR. MESSENGER: -- have to figure out a
8 tentative balancing -- to historicals, how to deal
9 with that.

10 MR. VINE: Mike, leave this on --

11 MR. MESSENGER: Go ahead.

12 MR. VINE: Ed Vine, University of
13 California. One of the things when I was looking
14 at your paper for the policy goals, that doesn't
15 include some other costs which the other numbers
16 do include.

17 For example, measurement and evaluation
18 and administration of the programs. And
19 particularly on the administrative side, I don't
20 know what percent of total dollars, but one would
21 think you'd want to include both of those if
22 you're going to try to compare it with the other
23 numbers, as well.

24 MR. MESSENGER: I agree with that, that
25 that's one of the factors that remember I said, we

1 don't have yet, is the resource requirements from
2 the government -- so those are going to have to be
3 added in, they're going to have to be added on top
4 of the policy goals, which are really
5 programmatic, just so that in some ways it's not
6 an apples-to-apples comparison. These are total,
7 these are just programmatic, so we're going to
8 have to add that component in, that's correct.

9 But, you know, my feeling is that's
10 going to be a 10 or 15 percent correction.

11 MR. HAWIGER: Marcel Hawiger on behalf
12 of TURN. I just want to make sure I understood
13 your last response regarding the load management
14 programs.

15 When I look at your table 2 on page 8 it
16 looks like the 0.250 for load management is
17 included within the 150 to 280 recommended based
18 on policy goals. Is that what you just said? Or
19 did I misunderstand?

20 MR. MESSENGER: That is correct. It's
21 included in here. It's not included in
22 historical. We're considering that sort of a
23 policy level --

24 MR. ALVAREZ: Mike, I guess the question
25 I have is -- Manuel Alvarez, Southern California

1 Edison -- is in your analysis you start with the
2 150 and increase. Did the staff do any analysis
3 that widens that breadth, either from zero to some
4 higher level of funding? Or do you just ignore
5 both ranges of your 150 to 280?

6 MR. MESSENGER: I didn't understand your
7 question. Are you suggesting that 150 to 280 is
8 too narrow, or --

9 MR. ALVAREZ: Well, that's what I'm
10 asking. None of your analysis identified a
11 broader option of policy for this activity
12 starting from no funding of this program to double
13 funding of this program.

14 So, you've basically narrowed it down to
15 the range and focused the policy discussion only
16 in that range. So did you just totally ignore
17 those other points, or think they were not viable?

18 MR. MESSENGER: Well, as I mentioned it
19 today, I think adopted evolutionary perspective
20 that suggested it would be difficult for the
21 system to either double funding or go to zero.
22 Bruce looked at the question in the zero case of
23 whether or not there was a continuing need.

24 And what I heard back from him is at
25 least preliminarily there is a continuing need.

1 So I didn't spend much time on the zero case.

2 The doubling case to me didn't make a
3 lot of sense, at least in the near term, because
4 there's got to be a transition -- it's difficult
5 when you make a transition to spend even what you
6 thought you were going to spend.

7 Witness what happened in 1998, when
8 budgets were, you know, 250 million and actual was
9 280. And there was a lot of other things that
10 caused that, but if there's another transition I
11 would expect that kind of fall-out.

12 So I think the answer is yes, that we're
13 trying to narrow the range to 150 to 280. If you
14 think that's inappropriate or can think of other
15 things that we should do, we'd be happy to listen
16 to that.

17 Go on to the next slide.

18 MR. MILLER: Peter Miller with NRDC. A
19 general comment. The policy goal section in your
20 paper, and you don't have a lot of detail there,
21 is the most confusing part for me, because it
22 seems to me to mix a number of different issues.
23 In particular the question of load management,
24 which is, I think, a different policy objective
25 than what we've had with where I see strategies

1 for the policy goals of energy efficiency
2 conservation resource acquisition and market
3 transformation.

4 So I'm not sure why those are being --
5 that kind of consideration is being brought to
6 this level of evaluation of overall funding. And
7 the data, itself, is confusing, since there's a
8 cite for the -- there's data for 1998 nothing for
9 1999. And the data don't really match what you're
10 citing for 1999.

11 So, I mean, there's detail concerns
12 here, I'm not sure if we want to take the time to
13 go into it. If you'd prefer to just have that in
14 writing or what.

15 MR. MESSENGER: I would agree that we
16 don't have enough detail on 1999. And I also
17 agree with you that there's a policy call about
18 whether you want to try to think about strategy as
19 a way of looking at funding as opposed to market
20 sectors or type of studies.

21 I think the best thing to do right now
22 is to probably give you more detail in terms of
23 '98, '99 in the next draft. But to acknowledge
24 that I understand your concern about whether you
25 should make these kind of calls based on

1 strategies, or whether you should make them based
2 on -- load management and energy efficiency.

3 What we try to do is combine them. We
4 probably haven't combined them very elegantly

5 But what I hear in your comments you're
6 not sure that it's a good idea to split things in
7 the strategy just in terms of policy goals.

8 MR. MILLER: More that you shouldn't be
9 making a decision about the overall funding based
10 on evaluation of a particular program.

11 MR. MESSENGER: Okay.

12 MR. MILLER: Rather that you make it
13 based on the opportunity for the overall
14 objectives.

15 MR. MESSENGER: Yeah. I think I know
16 what you're talking about.

17 MR. MILLER: Well, just to be specific,
18 on page --

19 MR. MESSENGER: Down at this --

20 MR. MILLER: Yeah, on --

21 MR. MESSENGER: -- reference?

22 MR. MILLER: -- page 7 it says that
23 staff believes the level of funding currently
24 devoted to supporting resource acquisition type
25 programs should be substantially reduced. And the

1 only thing that you cite to support that is a
2 first year evaluation of the nonres standard
3 performance contract program.

4 And to draw a broad -- about the overall
5 funding level based on the first year evaluation
6 of a single program just seems to me to be --

7 MR. MESSENGER: A stretch.

8 MR. MILLER: Yeah, thank you.

9 (Laughter.)

10 MR. MESSENGER: We will respond to that
11 comment. That's a very important comment and I --
12 more evidence there. And particularly I think
13 there needs to be a balance between both the
14 effectiveness of the tool and the opportunity.

15 We need to look at both how effective
16 the tool has been, in this case rebates -- as well
17 as what the additional opportunities are. So I
18 wouldn't only look at additional opportunities, I
19 want to look at both. And you're right, we
20 haven't melded them appropriately yet.

21 MR. MILLER: Okay.

22 MR. ABELSON: One last question, then.
23 It's a variant on the clarification I asked
24 earlier. Is it staff's position that the effect
25 of inflation over 10 years in this programs,

1 because they do go back at least that far, is
2 irrelevant? Or are you intending to factor it in
3 some point along the way in terms of the
4 purchasing power of the programs, themselves?

5 MR. MESSENGER: We're planning to deal
6 with that in the next slide here.

7 The next question that we think is
8 important is given that we can establish some
9 funding level, how should funding levels been
10 changed?

11 Right now we have the flexibility that
12 the PUC can choose to do funding annually,
13 biennially, every three years, sort of at some
14 discretion. The question is what you propose in
15 this legislation in terms of what's the
16 appropriate timing.

17 We looked at three options and we really
18 haven't -- we don't really have a recommendation
19 of which one is best. We're interested in looking
20 to feedback from stakeholders.

21 We could either specify a periodic
22 review by the CEC like every two years, and a
23 recommendation back to the Legislature that would
24 change the level.

25 Or we could specify some sunset, keep it

1 constant until the year 2006, let's say, and then
2 let's bring it back up again in the Legislature.

3 Or we could set some specific funding
4 period which would require less -- but at the same
5 level. So that's -- review. If it's done in 2006
6 and the Legislature needs to reauthorize at
7 whatever level it feels appropriate.

8 So those are sort of the three
9 variations on a theme. We're interested in
10 getting comment from people about whether that's
11 the right length of time, four years, or should be
12 every two years.

13 And then the question is who should be
14 making a recommendation to the Legislature, should
15 it be the CEC, some other party, whatever.

16 MR. MILLER: Peter Miller with NRDC.
17 All three of your options seem to assume that
18 there's continuing legislative reauthorization of
19 funding levels. But the Legislature has only once
20 in the past, whatever, 20 years that these
21 programs have been run, has only once actually set
22 a funding level.

23 Your options seem to assume that that
24 should now become the norm and that the
25 Legislature should periodically establish a

1 funding level. Why is that?

2 MR. MESSENGER: I believe that when we
3 went to public good funding the Legislature sort
4 of assumed that responsibility, -- that it wants
5 to reauthorize it to control that level. If there
6 are other options you'd like us to consider please
7 let us know.

8 If you think, for example, we should ask
9 for a funding level and have that be a continuous
10 funding level subject to some change at the
11 Legislature, that would be easier from our
12 perspective, but I don't currently perceive that
13 it would be politically realistic. But I'd be
14 interested in hearing people's comments.

15 When we sought continuous funding
16 appropriation on other public goods programs the
17 Legislature has pushed back and said, no, we want
18 to have this review every three or four years.

19 MR. ALVAREZ: I have a follow-up on
20 that. Manuel Alvarez with Southern California
21 Edison Company.

22 I think we all know what happened in AB-
23 1890, and when the Legislature determined the
24 level of funding, it took the level of funding
25 from the Public Utilities Commission

1 determination.

2 So it just transferred that
3 authorization to legislative authority. There is
4 no independent evaluation programs or activities.
5 It just continued those efforts.

6 So that leads me to the question, you
7 know, how do you get to the question of what
8 you're going to do with funding if the Legislature
9 has to appropriate funding annually or biennially,
10 whatever it may be.

11 MR. MESSENGER: Well, our proposal is
12 not to go to an annual or biennial, but to have
13 them authorize a level, and then we could give
14 them some periodic review and recommendation to
15 continue or not.

16 Let's say they authorize 200 million a
17 year, and in the year 2004 we came back and said,
18 we think it needs to go up 50 million. The
19 Legislature could either act on that or choose to
20 keep it at 200 million.

21 I think we're saying the same things.
22 You're right that the Legislature tends to defer
23 to the agency in charge. I'm not sure that it
24 would happen in this particular case.

25 Any other questions?

1 Now I get to cover the scope and method
2 of funding question. Currently these programs are
3 funded more out of CPUC jurisdiction customers for
4 electricity and natural gas. There's some
5 variation of natural gas not for customers out of
6 that. They don't pay the charge that all core
7 customers do.

8 And currently the funding is collected
9 as -- a revenue requirement is set in the bill at
10 a certain minimum funding level and the utilities
11 collect that by figuring out through a rate
12 allocation proceeding exactly how much they have
13 to collect from residential customers in terms of
14 per kilowatt hour, small commercial, large
15 commercial and industrial customers.

16 Staff is recommending that we can deal
17 with that system, although this is such -- to be
18 collected from all PG&E jurisdictional customers.
19 And we recommend to deal with the inflation
20 problem that you don't set some level that doesn't
21 get adjusted over time for inflation.

22 And you set either a fixed percentage of
23 the bill, and then use that to bill per kilowatt
24 hour, bills per therm collection from all customer
25 classes.

1 So you'd say, okay, the goal is going to
2 be 1 percent of bills. One percent of bills in a
3 given year might be 12 mills per kilowatt hour.
4 Then it might be 13 mills per kilowatt hour two
5 years after that because of inflation. So you
6 present it as a fixed percentage. And that would
7 have the advantage of rising and falling with the
8 sort of sales in the marketplace.

9 If you fix it at a flat level like 100
10 million per year, every year, it might go up or
11 down depending on what the sales in the
12 marketplace would be. So that's a proposal.

13 MR. MILLER: Peter Miller with NRDC. It
14 seems that there's one part of the concern, but
15 the other was that when you look at the historical
16 levels, if you use nominal dollars for past years
17 you're underestimating the amount of money that
18 was spent in previous years.

19 So that the historical analysis should
20 actually be adjusted to account for inflation from
21 previous years. Five-year average would, in fact,
22 be higher. The range would be higher on the top
23 end.

24 MR. MESSENGER: We can do that.

25 MR. NELSON: Will Nelson. I have a

1 brief presentation on guiding principles for
2 funding this morning and for administration this
3 afternoon. But I would like to comment right now
4 to focus on this muni question. I'll raise it
5 again in that presentation.

6 But I want to be pretty emphatic about
7 this. I would regard it as a basic policy flaw
8 not to resolve the dilemma of funding drawn from
9 IOU territories and funding drawn from public
10 board territories.

11 The basic premise is a market-based
12 approach towards new technologies and new
13 services. That's one basic premise. We have a
14 basic premise of restructuring that cross-cuts all
15 service territories.

16 And there has been a substantial working
17 group and public agency investment on trying to
18 arrive at a new paradigm. And I do not believe
19 that the munis should be left out of that
20 paradigm. It would be extremely artificial.

21 I believe that eventually the programs
22 that we're talking about will be superior more
23 specific focused programs on energy efficiency,
24 which in many cases have no resemblance to the
25 core mission of what utility distribution

1 companies are.

2 So therefore the municipal -- and based
3 on a premise of market transformation there's no
4 question that municipal customers will benefit,
5 and benefit greatly, from budgets drawn from IOU
6 service territories.

7 So that brings me to -- there's a
8 fundamental legal problem, I believe, and I
9 believe that this has existed for a couple of
10 years, but it hasn't been such a problem because
11 the IOUs have had the authority to spend in their
12 service territories through their own
13 administrations and through their organizations.

14 When and if this rate component is
15 largely divested from their control I don't think
16 we should believe that they're going to look
17 kindly if they believe that they're being treated
18 inequitably, and I believe by not having an
19 equitable across-the-board application of the
20 charge, the likelihood of a legal challenge is
21 very very great.

22 I'd also like to make a couple of other
23 points. I don't regard this --

24 MR. MESSENGER: Can I interrupt because
25 I just didn't understand that point. Who is not

1 going to be treated equitably. You think the UDCs
2 weren't being treated equitably?

3 MR. NELSON: The investor owned
4 utilities, in terms of the rate component, apply
5 to their charges and their bills might very well
6 not be treated equitably because they would not
7 have use of those funds in the same fashion that
8 say a public board organization would.

9 In terms of the levels, there might not
10 be an inequity, per se. But they wouldn't have
11 the use in their organizations.

12 I don't regard this matter as a simple
13 transfer of authorities from the PUC to the CEC.
14 I've said before in these workshops and say again,
15 I consider this a both/and proposition. And I
16 want to say this is a both/and proposition with
17 the muni boards, as well. This should be a joint
18 effort.

19 My presentation will propose a mechanism
20 for doing exactly that. And that's a dual
21 surcharge mechanism. One on the transmission and
22 distribution component of the charge and one on
23 energy usage.

24 I want to see us resolve as many
25 problems as possible, and this is a major problem

1 area. And I don't want to head into legislative
2 hearings saying munis do a better job at energy
3 efficiency programs than IOUs, or aren't IOUs
4 doing a good job. I would like to move forward
5 with a new paradigm.

6 And lastly, I do believe that
7 accountability is needed, given these are
8 considered public goods charge, public rate
9 components, more accountability is needed by the
10 munis in the form of some sort of formalized
11 reporting requirement. In this case they would
12 make their reports on their T&D EE charge to the
13 California Energy Commission.

14 Thanks.

15 MR. SPASARO: Frank Spasaro, Southern
16 California Gas. A couple of comments or
17 questions.

18 You said noncore customers have the
19 ability to opt out. What exactly did you mean by
20 that?

21 MR. MESSENGER: I thought there was a
22 set of customers that in SoCalGas' area that had,
23 in fact, opted out as part of the AB-1890, is that
24 incorrect?

25 MR. SPASARO: Well, first of all,

1 natural gas is a part of the AB-1890, so it
2 wouldn't be covered whatsoever.

3 MR. MESSENGER: Oh, --

4 MR. SPASARO: I thought you were getting
5 at the point that natural gas is non-bypassable in
6 terms of a surcharge or anything, so I wanted to
7 raise that point that that's certainly going to be
8 an issue in terms of how you look at funding,
9 moving forward with natural gas.

10 MR. MESSENGER: You're right.

11 MR. SPASARO: And the other point would
12 be on the second bullet that you have up there, I
13 haven't read your report. I don't know if you've
14 looked at how the PUC does cost allocation with
15 these programs with natural gas. And that may or
16 may not be an issue as you move forward, as well,
17 in those customer classes if you change that kind
18 of cost allocation as it currently exists.

19 MR. MESSENGER: It would help me if you
20 review what method they use to cost allocation.

21 MR. SPASARO: It certainly isn't an
22 equal cents per therm basis right now; it's based
23 on an allocation by customer class. And it's
24 litigated in the rate cases in the BCAPs as to how
25 much a specific customer class would get.

1 And then that absolute dollar amount is
2 then just divided by whatever the sales is going
3 to be.

4 MR. MESSENGER: I was hoping to avoid
5 all that litigation, and just move to an equal
6 cents per therm. But that has other problems with
7 it, I understand that.

8 MR. SPASARO: Yeah, it definitely will,
9 trust me.

10 MR. MESSENGER: Okay.

11 PRESIDING MEMBER LAURIE: Okay, is that
12 it, Mr. Messenger?

13 MR. MESSENGER: I have one more slide.
14 I'm sorry, did I miss somebody -- okay.

15 So here's the comments that we are
16 proposing. We've already had some comments on --
17 if we missed any factors to consider in setting
18 funding levels we'd be happy to hear from you.
19 And I heard one from Mike Rufo. If we should have
20 some kind of different scope in terms of the
21 collection mechanisms, or a different collection
22 mechanism, itself, in terms of the customers we
23 collect from, or how we collect it.

24 And we're interested, and we got one, I
25 think, option from Peter in terms of alternative

1 mechanisms -- modified funding levels over time.

2 PRESIDING MEMBER LAURIE: Okay, we are
3 going to seek public comment at this time. Please
4 make your comments concise and to the point. We
5 will keep time, because time is a limited
6 resource, you'll get a maximum of ten minutes at
7 which time you will get the hook.

8 And we will be keeping time, so please
9 adjust your comments accordingly.

10 Representative from TURN, please.

11 You're always free to submit comments in
12 writing, by the way. And let me talk about that
13 briefly.

14 We need comments in writing, if any, by
15 when? Any additional comments in writing by when?
16 We don't have long.

17 MR. SLOSS: Because we have to have
18 really a complete draft done by the end of this
19 month, it would be real nice, and with the use of
20 our server and internet it's pretty easy to do, is
21 if we could get them by the end of the week, by
22 Friday.

23 PRESIDING MEMBER LAURIE: Okay.

24 MR. SLOSS: If that's not unreasonable.

25 PRESIDING MEMBER LAURIE: We won't --

1 consider it to be really nice if they can get it
2 the end of the week. We will indicate if you want
3 your comments heard and digested with reasonable
4 opportunity for input, get it in by the end of the
5 week, please. Thank you.

6 Sir.

7 MR. HAWIGER: Thank you very much. Good
8 morning, Commissioner Laurie, Commissioner
9 Pernell, Staff.

10 My name is Marcel Hawiger. I'm an
11 attorney with The Utility Reform Network, TURN.
12 This is my first appearance in front of this
13 Commission, thank you.

14 TURN represents the interests of
15 residential and small commercial customers. As a
16 result you'll see that my comments tend to focus
17 on the issues that affect those customers.

18 I have some fairly general comments
19 regarding the staff report, and then some
20 recommendations for particular items to include
21 and additional factors to consider in setting the
22 future funding levels.

23 Historically TURN has always supported
24 energy efficiency programs because there was
25 always a public benefit to all ratepayers when

1 money could be spent on energy efficiency and
2 avoiding investment in generation assets which
3 would be paid by all the ratepayers as part of
4 their rates.

5 Energy efficiency has been proven to be
6 more cost effective dollar per dollar than
7 investment in generation.

8 There are two changes that have occurred
9 in the past two, three years, however, that are
10 important and affect the relative effect of energy
11 efficiency on different customer classes.

12 I believe those changes should be more
13 explicitly defined in the section 3 regarding
14 changes in market conditions. They are not really
15 in this draft staff report.

16 Those changes are two. One, under AB-
17 1890, as a result of market valuation we've seen
18 divestiture of all generations except for some
19 specific hydro and nuclear, from the utilities.

20 What this means is that generation
21 investment is no longer specifically part of
22 rates, or at least future generation investments.
23 Thus, that link between the public benefit of
24 energy efficiency, lower rates, is no longer as
25 clear. There are always benefits to the

1 individual customers who receive energy efficiency
2 services, but those do not necessarily translate
3 to all ratepayers.

4 I'll come back in a moment, I think Rich
5 Ferguson provided very valuable insight in his
6 report that was on the website regarding public
7 benefits of energy efficiency, and I'll come back
8 to that in a few moments.

9 The second major change has been the
10 shift to a goal of market transformation as a
11 fundamental goal of energy efficiency programs.
12 And the concomitant shift to a set of milestones
13 as recommended by the California Board for Energy
14 Efficiency as the yardstick to measure program
15 performance.

16 What this change has done is in some
17 ways minimized the link between actual energy and
18 dollar savings and program performance. There
19 still may be a link, and I'm not necessarily
20 saying that the goal of market transformation is
21 bad. But that link is not as clear.

22 What this means, as far as TURN is
23 concerned, that now there are increasing potential
24 problems of equity among customer classes. And by
25 this I mean the fact that historically

1 nonresidential programs have been funded at a
2 greater level than residential programs because
3 everyone knew that you could get a greater bang
4 for the buck by focusing on a large factory and
5 decreasing energy use in that factory.

6 There were greater potential savings.
7 That transaction costs were less, et cetera, et
8 cetera. But we also knew that if you did that and
9 you decreased the total energy use and that
10 benefitted all ratepayers.

11 We're not sure that benefit to all
12 ratepayers will occur, and therefore I think that
13 part of the factor, factor 8 listed in the report,
14 states that one should consider the relative cost
15 burden of funding these programs and different
16 types of customers.

17 I suggest that we need to consider both
18 the cost burden, the equity between how much does
19 a customer class contribute to the programs versus
20 how much funding is spent on this customer class.
21 As well as the equity of the benefits, the
22 relative benefits. How much of the potential
23 savings occurs as a result of programs focusing on
24 residential and small commercial customers versus
25 programs focusing on nonresidential customers.

1 Now, let me just for a moment talk about
2 those two equity issues. I think there has been
3 some shift and more funding of residential
4 commercial programs in proportion to the amount of
5 revenue contributed. And TURN welcomes that
6 change.

7 We do note that because of the
8 allocation issue that was raised of how the
9 revenues collected, which I won't go through in my
10 brief time, there still is a net shift of money
11 from residential to nonresidential customers.

12 And the staff report notes that there
13 are potential savings in discussing factor 2 in
14 the residential and small commercial markets. And
15 TURN would certainly welcome greater emphasis on
16 spending on programs that affect those customer
17 classes.

18 But secondly, the issue of benefits.
19 And here our concern is that programs be
20 effective. And certainly this is one of the
21 factors that's listed. And I neglected to mention
22 at the outset that TURN really does strongly
23 support those factors, the eight factors listed by
24 staff. And we feel that those really should be
25 examined, the program effectiveness, the future

1 goals, the effect on different customer classes,
2 the potential savings. Those really need to be
3 examined in order to determine an optimal funding
4 level.

5 But in terms of program effectiveness,
6 we don't want to see funding on residential
7 programs or programs geared toward the residential
8 customer if they provide customers with lots of
9 information that they don't use, and don't
10 actually change behavior and don't produce energy
11 savings. That's not what we're after.

12 We're after programs that produce energy
13 savings. And this leads me to my last major
14 comment, and that is that as part of determining
15 program effectiveness we need to decide, we need
16 to have some sense of what will be the new
17 measurement protocols for determining program
18 effectiveness under the markets transformation
19 regime.

20 Not only that, but we need to have some
21 sense of where are we going. Market
22 transformation is a valuable goal. It is not one
23 where TURN has any expertise in particularly, so
24 I'm just relying on the staff reports.

25 And I would offer two comments. One is

1 if the ultimate goal is to develop vibrant private
2 markets that no longer need public subsidy, we
3 need to have some idea of how do you determine
4 when you've reached that goal.

5 And second, how do you determine that
6 the goal cannot be reached; or that you need to
7 continue funding these programs from public goods,
8 because there are inherent market problems,
9 difficulties in addressing energy efficiency. And
10 is it possible that those market problems exist
11 differently in the nonresidential, the new
12 construction, or the residential side.

13 And so maybe those need funding levels
14 for those different programs as well as different
15 customer classes, may need to be considered
16 separately in the long run under market
17 transformation.

18 And so in closing, in terms of any
19 specific suggestions, I think TURN would recommend
20 that there be some review mechanism so that actual
21 benefits of the programs be connected to their
22 funding level.

23 The funding should not just be based on
24 authorized historical levels, because those were
25 levels suggested by the utilities at the PUC

1 proceedings.

2 Thirdly, I don't have, at this point, an
3 opinion as far as the legislative review, and I
4 think that is an important question and we will
5 try to come back to that if we can make a specific
6 recommendation.

7 And lastly I would urge the Commission
8 to perform or to fund some studies along the line
9 of the study performed by Mr. Ferguson of the
10 Sierra Club. His study shows that there are still
11 public benefits because obviously if demand is
12 reduced, prices of electricity at the PX are
13 lower, and therefore all ratepayers benefit.

14 TURN's question is how does that benefit
15 translate to the amount of money paid by different
16 customer classes. Is that still a net benefit for
17 residential and small commercial ratepayers.

18 Thank you very much.

19 COMMISSIONER LAURIE: Good questions,
20 thank you, Mr. Hawiger.

21 Representative from EPRI.

22 MS. GUILD: Good morning, I am Renee
23 Guild. I am the Executive Manager of EPRI's
24 public benefit programs. And, Commissioner
25 Laurie, Commissioner Pernell, Staff and members of

1 the public, I thank you for the opportunity to
2 speak today, and for the openness of the workshop
3 process that you've crafted here. I think it's
4 certainly developing a rich body of thinking on
5 the current status and future of these programs.

6 EPRI's remarks today focus on the
7 opportunity for the CEC to develop strong linkages
8 between the public benefit program and the PIER
9 program.

10 Approximately a year ago I led an EPRI-
11 sponsored workshop at the CPUC that was attended
12 by several of your staff, Laurie ten Hope and Sy
13 Goldstone, as I recall, were there, to discuss
14 what we perceived as a gap between the
15 administration of energy efficiency programs
16 between the PUC's market transformation oversight
17 and the CEC's development of the energy efficiency
18 programs within the PIER fund.

19 And the need for some consideration of
20 how to fill that gap in terms of how to develop
21 good technologies that will be used by the
22 marketplace in the market transformation effort.

23 I think the invitation to discuss the
24 administrative options presented in AB-1105
25 presents an opportunity for the CEC to create

1 oversight structures for both activities that
2 could be joined at the hip.

3 Two ways would be to have the same CEC
4 Commissioners providing oversight by the
5 subcommittee structure on both funds, or perhaps
6 just having one Committee serving both.

7 Secondly, some of the same individuals
8 could serve on the independent review panels for
9 both activities. For example, the PIER fund
10 independent review panels are meeting upstairs
11 yesterday and today, and I note that Peter
12 Miller's in the room here today, and he serves on
13 that panel. And I'm sure that there might be
14 others among that committee that would be willing
15 to serve on both committees that would provide
16 some kind of independent review of both programs.

17 This would help insure that the
18 necessary energy efficiency technology tools that
19 are needed to achieve sustained permanent energy
20 efficiency downstream are in the RD&D pipeline,
21 and that both public purpose funds are invested to
22 achieve their maximum public benefit.

23 Finally, I urge you to take full
24 advantage of the charge given you in the language
25 of 1105 to consider the synergies -- I like that

1 word -- between the public good programs proposed
2 in the PIER program and develop a strong
3 connection between the two in whatever
4 administrative structures you choose.

5 Thank you.

6 COMMISSIONER LAURIE: Thank you, Ms.
7 Guild. Mr. Flood, please.

8 MR. FLOOD: Good morning, my name is
9 Richard Flood; I'm Executive Director of Community
10 Energy Services Corporation. We're a nonprofit
11 organization and licensed contractor serving East
12 Bay Area. And I'll make some brief comments
13 today, and I will be following up with written
14 comments by Friday.

15 My point for today is regardless of the
16 administrative structure that's chosen for energy
17 efficiency I'd like to encourage the establishment
18 of regional energy offices to deliver energy
19 efficiency services in support of local government
20 initiatives.

21 As I'm sure most of you are aware in
22 1984 AB-1659 was signed into law to authorize
23 local governments to create community energy
24 authorities to plan and construct new energy
25 projects, develop solar energy and energy

1 conservation plans and ordinances and to be a
2 viable structure for accessing tax exempt
3 financing for energy efficiency or renewable
4 energy options.

5 To date only two such regional energy
6 offices have been established, both in southern
7 California. The San Diego regional energy office,
8 for example, has operated for over four years now
9 in coordinating energy services for the San Diego
10 area governments, or SanDAG. I believe it was
11 support funding from public that's charged moneys
12 from San Diego Gas and Electric.

13 There's strong support for the
14 establishment of three or more similar offices in
15 northern California in the next year.

16 As one possible structure, that's my
17 organization. We, among other things, manage a
18 U.S. Department of Energy grant program under the
19 Rebuild America Partnerships. Our local office is
20 called Reenergize East Bay, and it's actually a
21 consortium. It includes the Cities of Oakland,
22 Berkeley and Emeryville, the chambers of commerce
23 of the three cities, PG&E, the Building Owners and
24 Managers Association of East Bay, and also the
25 Energy Alliance, which is an energy professional

1 organization comprised of about 70 or so companies
2 energy service providers in northern California.

3 We work directly with the city councils,
4 with energy officers, with community development -
5 - economic development agencies, public works
6 departments and others who are already working on
7 other community improvement projects.

8 We integrate energy efficiency and water
9 conservation into those activities. This
10 frequently includes activities such as business
11 retention strategies, neighborhood economic
12 development improvements, municipal cost reduction
13 programs, facades improvements and a range of
14 things the cities are already doing.

15 We deliver products and services to the
16 sectors that we feel have traditionally been
17 underserved by utility based energy efficiency
18 programs. And again, with the equity issue, have
19 not necessarily gotten their fair share out of the
20 moneys, which are typically not the target markets
21 of the large ESCOs.

22 This includes municipal facilities,
23 small commercial sector, multifamily residential.
24 We also work with light manufacturing and
25 industrial and other lower economic customers.

1 We deliver our energy efficiency
2 services through a variety of mechanisms. Several
3 of the communities we're working with have
4 ordinance based programs that are quite effective
5 in delivering energy efficiency programs.

6 We've also helped several cities to
7 develop new incentive programs. One, for example,
8 that rather than a direct rebate program, buys
9 down the payback period of installed lighting and
10 control systems to a two-year period. Quite an
11 interesting program.

12 We also coordinate with other state and
13 federal programs such as EPA and DOE, trade allies
14 program such as ClimateWise. DOE has a new
15 program called business partners, building solar
16 roofs, recognized organization. And of course we
17 also work with the utility-managed incentive
18 programs.

19 Right now we're working with PG&E to
20 develop new projects that are affiliated with four
21 of the statewide incentive programs, including the
22 small business standard performance contract
23 program, multifamily SBC, Savings by Design which,
24 of course, is new construction, and obviously the
25 express efficiency program.

1 I plan to provide some additional
2 information on the potential role of Regional
3 Energy Offices and some tables outlining current
4 activities to you by Friday. Thank you very much.

5 COMMISSIONER LAURIE: Thank you, sir,
6 very much. Mr. Nelson.

7 MR. NELSON: Thank you. Good morning,
8 Commissioners, my name is William Nelson, I'm
9 testifying as a private consultant.

10 I'd like to say first off I am in
11 substantial agreement with the general direction
12 outlined in the October 6th staff paper for
13 administration. I have details to provide. I do
14 have major differences on the question of the
15 scope of funding and how the charge is applied.

16 COMMISSIONER LAURIE: Are you going to
17 be here this afternoon, Mr. Nelson?

18 MR. NELSON: Yes, I will be here this
19 afternoon.

20 COMMISSIONER LAURIE: Well, I'd like you
21 to limit your discussion this morning to the
22 funding issue.

23 MR. NELSON: Certainly. And if you'll
24 turn to the back of the handout I have, that
25 addresses the principles for program funding and

1 authorities.

2 The major difference I have with the
3 direction thus far on funding is I believe that a
4 role should be retained for the Public Utility
5 Commission, as well as having a role for the
6 public boards. As discussed a little bit earlier,
7 I think bifurcating the approach, having the
8 public boards completely control their energy
9 efficiency programs and completely eliminating the
10 Public Utility Commission would be a highly
11 irrational approach.

12 What I'm recommending that this
13 Commission recommend to the Legislature is to
14 establish two minimum uniform energy efficiency
15 surcharge rate components.

16 Now, rather than regarding this as
17 complexification, which it may appear first off on
18 one level, I think this will alleviate and clear
19 up major problems discussed.

20 Recommending one surcharge on the
21 transmission and distribution charge on the bill
22 to be regulated through the public utility boards
23 and through the Public Utility Commission. Now,
24 in the case of the utilities commission they would
25 continue to have authority on these rates, and

1 would receive them as applications from the
2 distribution companies.

3 And the legislation should authorize
4 them to have the ability to establish trust
5 accounts if they deem that useful. To direct
6 distribution to the CEC trust accounts, or to
7 permit the UDCs, themselves, under its
8 jurisdiction, to administer the funds.

9 And I'll just refer you to the
10 administration portion on the front 1C. When I
11 speak of a UDC role, it's a much more restricted
12 role in the energy efficiency services than they
13 currently conduct, but a role, nonetheless.

14 The second component, the second
15 surcharge would be levied against energy usage.
16 And these funds would flow into the CEC trust
17 accounts. And on a biennial basis, every two
18 years, the CEC would review the structure and
19 application of this surcharge.

20 It may well be that we would start out
21 with a uniform type surcharge because that will be
22 simpler to justify to the Legislature. But in
23 time we might find that a more structured charge
24 makes more sense.

25 Point 4, the PUC and the public utility

1 boards would continue to retain their rate-setting
2 authority on the T&D charge. In terms of the
3 numbers, the ballpark that I'm thinking in terms
4 of, if you look at the current budgets, perhaps \$1
5 might be raised and collected on the T&D portion
6 for every \$3 or \$4 raised on the energy usage
7 surcharge.

8 So, the UDCs and the munis would have
9 direct control and authorities over, say, one-
10 fifth to one-quarter of the funds that we're
11 speaking of today.

12 I also specifically recommenddedicated
13 funding from the energy usage surcharge for local
14 jurisdictions and the community energy authority
15 programs. And that dedicated funding should be
16 not less than one-eighth of the energy usage funds
17 that would pass through the programs, or the
18 designees of the local jurisdictions of the
19 community energy authorities that meet CEC
20 criteria. So CEC would have oversight authority
21 once again.

22 And then speaking to the use of the
23 funds by this agency, itself, on the energy usage
24 surcharge, I address information technology
25 functions which I've long supported an elevation

1 of that, public programs and interagency
2 integration.

3 And then the general administrative
4 area. The legislation should set a limit and
5 should provide to the Legislature that the
6 Commission will not use, I'm recommending, more
7 than one-eighth of the fund for these types of
8 services.

9 We should be seeking the strengths of
10 all of the management organizations involved to
11 date in these programs. We do not want to lose
12 the linkage with the utility distribution company
13 functions, on the rates, the rate classes, the
14 customer classes, the meters, how meters are
15 configured, with lessors and lessees, master
16 meters and submeters.

17 The UDCs will continue to run the
18 billing platform. I'm completely persuaded of
19 that for quite some time for most customers, and
20 certainly probably for all of the residential and
21 small commercial customers.

22 We also want to have a continued linkage
23 with the system reliability issues and the peak
24 management issues.

25 Do not leave the natural gas rate

1 component issue behind, even though AB-1890 is an
2 electric component focused program. Companion
3 legislation needs to be brought in to address the
4 natural gas rate component.

5 I'm recommending a large portion come
6 under control of the gas distribution companies,
7 and that specifically seismic hazard mitigation be
8 called out to be synergized with energy efficiency
9 planning in the gas system.

10 The remaining 50 percent of the EE gas
11 read component I'm recommending would go to a
12 separate CEC trust account. And the CEC would
13 budget and distribute that account. It could
14 blend support of those funds with the other EE
15 programs from the electrically funded programs.
16 They could also provide special consideration for
17 gas technologies and the gas systems for gas-
18 related EE projects.

19 So that the gas companies, as a
20 stakeholder, would have a venue to come in and
21 discuss the use of those moneys for their
22 customers.

23 And in closing I would just like to
24 recommend on the funding levels we are functioning
25 basically on precedent. I don't have enough

1 information to go beyond that. Other than to say
2 the funding level should be not less than what it
3 is currently. It should be adjusted for
4 inflation. It should also be adjusted for the
5 growth in California's economy, which is
6 considerable.

7 Thank you.

8 COMMISSIONER LAURIE: Thank you, Mr.
9 Nelson, very much.

10 Mr. Rufo, did you want to comment at
11 this point?

12 MR. RUFO: My name's Mike Rufo, I'm
13 representing Xenergy. We're an energy information
14 consulting and implementation firm, 200 people
15 nationally, about 30 folks in Oakland serving the
16 California and western regions.

17 The only thing I wanted to say about the
18 funding level, most of my comments have to do with
19 administrative structure, which is this afternoon,
20 is with respect to the proposal on the four-year
21 minimum, that was one of the proposals for the
22 length of funding.

23 I think, in my opinion, that is a
24 minimum. Anything less than four years is not
25 going to be able to really marshal the private

1 sector in any constructive way, given private
2 sector investment and budget forecasting
3 processes. Especially given the fact that we know
4 when there is a transition that it slows down
5 somewhat the effectiveness of the expenditures.

6 So if we move into a transition again it
7 will take, you know, at least a year or two to get
8 through the transition, so that only leaves two
9 years to really kind of get into the real
10 effective part of the process in terms of
11 capturing public benefits.

12 So I would say that, you know, four
13 years is kind of a bare minimum. There's really
14 almost no point in going forward if you don't go
15 forward with a four-year minimum.

16 Second sort of point, somewhat of a
17 joke, but not really, is that a number of our
18 recent studies and those performed by other
19 consultants show that there is and has been a fair
20 amount of spillover of public benefits into what
21 we call the low DSM states in the country. Those
22 states that have not invested over the last ten
23 years in DSM programs.

24 We think we can show that there's been a
25 significant spillover of energy efficiency into

1 those states. And really, they're capturing a
2 public benefit created by states like California
3 and some of the New England states. So I would
4 encourage those who have the relationships with
5 some of the other states and the federal
6 government to work with those entities to do their
7 fair share in terms of capturing these energy
8 efficiency public benefits.

9 COMMISSIONER LAURIE: Thank you, sir.

10 MR. RUFO: Thank you.

11 COMMISSIONER LAURIE: Mr. Ely. Good
12 morning.

13 MR. ELY: Good morning, Mr. Commissioner
14 and members of staff. My name is Richard Ely.
15 I'm here representing ADM Associates, but I'm
16 speaking much more generally as an economist.

17 I thought I would take a moment at this
18 particular juncture to back off any of the details
19 of the particular programs or some of the details
20 that have gotten into and sit back and ask what
21 are we doing.

22 I think we have a terrific opportunity.
23 There's enormous economic horsepower, economic
24 analyst horsepower here at the CEC. And as you're
25 facing the Legislature you have an opportunity to

1 reevaluate the entire structure.

2 I have three comments and a suggestion.

3 One, on the funding mechanism. There's an
4 inherent flaw in the current funding mechanism.

5 We are presently in effect taxing the
6 consumption of energy, yet there seems to be no,
7 that I can find, any reason to do so. There's no
8 public goods -- public cost created with the
9 consumption of energy. There's no pollution
10 created with the consumption of energy.

11 All of these factors come from
12 generation of certain types, and to some extent,
13 transmission, and to some extent distribution.
14 Yet, we're taxing the consumption of it. This
15 means that we're taxing particular entities
16 basically on the wrong end. What we should be
17 doing is taxing those particular sources that
18 create public costs.

19 The fundamental principle here is that
20 if you're going to have a public goods charge,
21 that public goods charge should be rested, or
22 should be incident upon the entity or the source,
23 if you will, of those things.

24 The way we're doing it now is, in
25 effect, we are taxing consumption, which has

1 absolutely nothing to do, or very little to do
2 with the generation.

3 My recommendation is to come up with an
4 underlying economic model of what it is you're
5 trying to do, and to formulate policy from that
6 model. Without an underlying model that is
7 contained with various measurable quantities,
8 public policy is very difficult to make.

9 This is being addressed in states, I
10 believe, like Pennsylvania where they have market
11 baskets, they have differential taxation on
12 different sources of public cost. In effect,
13 renewables and that type of thing I believe
14 supported by different groups at the CEC, are
15 promoted in effect. They are subsidized in a
16 somewhat revenue neutral manner by taxes on more
17 socially burdening.

18 This is a public goods charge. In
19 effect, it's transferred over and funds things
20 that are not so burdensome.

21 It can also, as it is presently being
22 used, come over and fund on energy efficiency
23 programs to the extent that they meet public goods
24 and public needs.

25 My second has to do with allocation.

1 Customer classes. Much of the comments made by
2 TURN I'm concerned about. If we're to have a
3 public goods charge, those moneys, in effect,
4 should be returned to the groups of customers, if
5 you will, or the groups of citizens in the state
6 that are burdened by those public goods.

7 The idea that you would return, in
8 effect, to the polluter the same amount of money,
9 in effect, that you've taxed him makes no sense.
10 What you should formulate is a plan that if you're
11 going to tax a pollution or a public bad or a
12 public cost, you should transfer that money to the
13 people or entities who are burdened. They may be
14 the same entities, they may be the same customer
15 classes, but they may not.

16 And unless you have a good underlying
17 economic model as to what you're doing, in terms
18 of transferring allocations with public goods,
19 you're not going to be able to correctly allocate
20 that.

21 There's a fundamental principle right
22 now that seems to be prevalent that in effect
23 customer classes, if you will, should be made
24 whole. Yet there's no underlying model that I'm
25 aware of that says the social costs of these

1 particular classes are made whole by the public
2 goods moneys that are returned to them. Without
3 that underlying economic principle, it makes no
4 sense to have it as it is. You're, in effect,
5 paying the polluter back the very moneys you're
6 taxing from him.

7 Finally, a third comment is on market
8 transformation or mechanism. These are public
9 goods moneys. Private entities, by definition,
10 cannot supply public goods. Public goods cannot
11 be supplied by the private sector, by definition.
12 It's simple economics.

13 The more that we pretend that we're
14 going to privatize public goods like parks and
15 whatever the economist means by a public good,
16 we're clearly heading in a wrong direction.

17 Again, what is missing here, what I
18 recommend that the Commission take this
19 opportunity to do is to sit back with some good
20 economists and come up with a model of what it is
21 we are doing here. What is the underlying
22 economic model that we are trying to maximize.

23 Formulate a set of objectives through
24 the usual advocacy process, a set of objectives
25 that can be measured or at least estimated by

1 organizations such as Mike's, who's done an
2 excellent job, ourselves or others, it doesn't
3 really matter, and with that measurable set of
4 objectives you can derive policy.

5 And from those policies you can derive
6 programs. But if you're going to have a public
7 goods program it should be based on principles.
8 The principles should be derived from reasonable
9 public economic models. And from that I think
10 many of the questions in terms of where money
11 goes, how it's collected, and how it's spent can
12 be derived.

13 Thank you very much.

14 COMMISSIONER LAURIE: Thank you, Mr.
15 Ely.

16 Anybody else desire to offer comment?
17 Mr. Miller.

18 MR. MILLER: Thank you for the
19 opportunity to comment on the staff funding paper.
20 And I apologize for the somewhat disjointed nature
21 of the comments which follow, given the limited
22 time we've had to review this, but I'll try and
23 get just four quick points on the record here.

24 The first, I think, in terms of the
25 staff's recommendations on load management

1 programs, I think it's important before going much
2 further that staff clarify what is meant by load
3 management programs. What type of programs are
4 being considered.

5 In particular the paper refers to
6 strategies including new rate tariffs, which
7 doesn't seem to me to be a program in the sense
8 that energy efficiency programs or other public
9 goods programs are a program. More that's a PUC
10 activity of establishing rates.

11 So, it's hard to even evaluate how \$50
12 million, as a round number, might be used without
13 much more detailed understanding of what
14 specifically is meant by load management programs.

15 On the overall funding level I'd like to
16 recommend a -- strongly recommend that the
17 Commission consider a two-stage process. First,
18 asking the question of whether there's a
19 continuing need for funding, for the programs at
20 all, which the staff has begun to do. And appears
21 to be likely to recommend that there was a
22 continuing need for funding.

23 And then second, asking if there's a
24 strong policy basis for recommending a different
25 funding level than we currently have authorized

1 though AB-1890. And this in particular, it seems
2 to me that if the staff is not going to recommend
3 a dramatically lower or higher funding level, that
4 without it a very detailed and strong analysis
5 supporting a different funding level, it's hard to
6 come in and say, well, we think it should be 260
7 instead of 276.

8 Based on a quick review of factors, and
9 given the political difficulty of recommending a
10 different level, it seems to me to make sense that
11 there should be a presumption if we're going to
12 recommend it. Something similar to the current
13 funding level, we should recommend the current
14 funding level.

15 Third point is that I believe that
16 legislative appropriation on anything close to
17 what the staff appears to be leaning towards, a
18 two-year or four-year funding basis will
19 substantially reduce the program effectiveness,
20 and the uncertainty and difficulty of relying on
21 continuing legislative appropriations.

22 Therefore the report should not
23 recommend a shift to legislative authorizations,
24 regular legislative authorizations simply based on
25 the presumption that that is what the Legislature

1 will demand.

2 The report should instead recommend the
3 best funding basis or approach to funding
4 authorization for the programs, and perhaps note
5 that if the Legislature will require a more
6 frequent authorization, that these are the
7 criteria that it should consider and the impacts
8 on the programs that that will impose.

9 Final point is that the current policy
10 goals discussion in the paper, as I read it,
11 doesn't provide an adequate basis for making any
12 recommendations or decisions at this point in time
13 in its current form.

14 As it's presently structured it begins
15 with a reference to policy goals, their
16 underdevelopment by the staff that, if adopted,
17 may influence the setting of funding levels. And
18 so there's no firm basis for the discussion which
19 follows.

20 The discussion which follows draws
21 broadstroke conclusions about overall funding by
22 program strategy, which don't really -- aren't
23 consistent with the data and aren't adequately
24 supported by the analysis.

25 So, I would suggest that either that

1 discussion needs to be substantially revised and
2 approved, or simply deleted.

3 COMMISSIONER LAURIE: Thank you, Mr.
4 Miller. I was able to follow that, so if that was
5 disjointed that says something about my analytical
6 processes.

7 (Laughter.)

8 MR. MILLER: I do, in emphasis of a
9 disjointed nature, I do have one final comment.

10 (Laughter.)

11 MR. MILLER: Which is back to point
12 three on the funding level. Which is that in
13 terms of the decision whether to establish a
14 funding level based on a percentage of the bill,
15 or a specific mills per kilowatt hour, the
16 Commission should consider the fact that CTC will
17 be eliminated within a couple years for all
18 utilities.

19 And if the surcharge is based on a
20 percentage of the bill, then the total available
21 funds would substantially drop after the CTC is
22 eliminated, if it's based on the current bill
23 levels.

24 COMMISSIONER LAURIE: Thank you.

25 MR. WILSON: Thank you, Commissioner

1 Laurie, Commissioner Pernell. I actually wasn't
2 planning to make a statement today, but I do feel
3 compelled to respond very briefly to a proposal
4 put forward by Mr. Smith a little while ago.

5 This short response is we would be quite
6 opposed to a proposal which would transfer a
7 substantial portion of the funds collected by the
8 local municipal utilities to statewide program.

9 I do think that, you know, there is a
10 question which I think we should try to address
11 which has to do with coordination of our
12 activities. And at some level, especially when it
13 comes to marketing and so forth, there needs to be
14 a certain amount of -- a certain kind of
15 relationship, I think, between what's going on at
16 the local level and what's going on at the state
17 level.

18 But the Legislature did recognize in AB-
19 1890 that there are sort of a dual structure of
20 regulation of utilities in California. They chose
21 not to really overturn that in AB-1890. It
22 continues. They respected the local agencies to
23 regulate their own local utilities.

24 And while that doesn't always make for
25 the most elegant or simplest model, it seems to

1 work pretty well, and I think provides some
2 advantages. And so consequently I just wanted to
3 make sure that that point of view was expressed
4 today.

5 Thanks.

6 COMMISSIONER LAURIE: Anybody else like
7 to comment this morning? Yes, sir.

8 MR. VINE: Ed Vine, University of
9 California. I just want to sort of reiterate one
10 of my questions earlier what Peter Miller was
11 saying, that if you're looking at the amount of
12 money that should be spent for energy efficiency,
13 it should really as best as possible be based on
14 some technical analysis of how much energy savings
15 are out there.

16 And I think if you don't have that data
17 now as part of your report, perhaps you can be
18 more prospective in the report, and outlining a
19 task where that particular activity does get done
20 in the near future. So that when legislatures or
21 other people ask you, well, how much of this money
22 will save energy, and what part of that is either
23 the technical potential or your market potential,
24 your program potential, you'll have an answer for
25 that.

1 Because I think until you get to that
2 you're going to be left with a lot of questions
3 about how far down the road you are.

4 So I just want to leave you with that
5 comment. Thank you.

6 COMMISSIONER LAURIE: Thank you, Mr
7 Vine.

8 Yes, sir.

9 MR. HAWIGER: Could I add one comment --

10 COMMISSIONER LAURIE: Okay, wait.
11 Anybody else who has not had a chance to speak
12 yet? I'm sorry.

13 MR. HAWIGER: -- comment regarding
14 funding mechanisms.

15 COMMISSIONER LAURIE: I think you had 42
16 seconds left on your --

17 (Laughter.)

18 MR. HAWIGER: Thank you very much, and I
19 won't repeat my name, then. No. Marcel Hawiger
20 with TURN. I'm sorry, I did neglect this specific
21 issue regarding funding mechanisms.

22 As our comments indicate the ideal would
23 be some equitable revenue collection versus
24 benefit allocation. However, that is a
25 complicated process.

1 And more to simplify we would certainly
2 recommend that revenue collection be done on an
3 energy usage basis, equal cents per kilowatt hour,
4 equal cents per therm, as opposed to the current
5 allocation which allocates a slightly greater
6 percentage to residential customers of revenues
7 than their percentage of energy use.

8 And certainly there are equity reasons -
9 - and secondly, the bill we would recommend the
10 charge be based on a volumetric basis within the
11 bill, itself, also. But that allocation among
12 customer classes is fundamental.

13 And there are good equity reasons for
14 reducing the cost burden on residential and
15 commercial customers, due to the fact that they've
16 shouldered the disproportionate burden in the
17 past.

18 Thank you.

19 COMMISSIONER LAURIE: Okay, thank you,
20 Marcel.

21 Chris.

22 MR. CHOUTEAU: Chris Chouteau with PG&E.
23 Just a quick comment. The current rate mechanism
24 allocates a charge for public goods based on the
25 cost burden by customer class. So, as was stated

1 earlier by Frank Spasaro from SoCalGas, the
2 current mechanism which is set in the CPUC rate
3 setting mechanism and would continue to be set
4 that way, fairly allocates based on the costs
5 generated by that class of customers. Rather than
6 a simple kilowatt hour charge.

7 And I would expect that in the future
8 you would want to somehow fairly allocate these
9 public benefits charges and certainly since one of
10 the benefits that's generated by the energy
11 efficiency programs is the reduction of costs,
12 both supply and distribution costs, that it would
13 be fair to continue to allocate the public goods
14 charge based on the costs generated by that
15 customer class.

16 The only other comment I have is just to
17 agree with some comments that have been made
18 earlier that four years is a minimum, and in fact,
19 given our experience with the last four-year
20 timetable, I think it may be less than a minimum
21 if you want to really effectively mobilize the
22 private sector in this.

23 Thanks.

24 COMMISSIONER LAURIE: Thank you, sir.

25 Mr. Nelson.

1 MR. NELSON: Thank you, Commissioner.
2 This will just be one minute.

3 A further legal complication on the
4 equity issue of public board versus investor-owned
5 utilities. Yes, currently AB-1890 permits public
6 boards to allocate the moneys collected for the
7 public rate component to the programs as they
8 choose fit.

9 In terms of what I term the special
10 customer needs category, more commonly referred to
11 as low income, but I like to be more expansive in
12 referring to that rate component. One, I've
13 supported in the past, will continue to recommend
14 that this rate component be separated out for a
15 variety of reasons.

16 Inequity, for those classes receiving
17 different kinds of public services, in different
18 territories, may be an even more legally
19 complicating and challengeable factor than even
20 the UDC challenges that are potentially there.

21 And lastly, I'll just point out I can't
22 quantify it, but the utilities commission
23 conclusion that a utilities company has a basic
24 tension or conflict with its revenue requirements
25 versus mounting aggressive energy efficiency

1 programs, that tension does exist with municipal
2 agencies, as well. And will be more fully
3 resolved by having a different funding mechanism.

4 Thank you.

5 COMMISSIONER LAURIE: Thank you, Mr.
6 Nelson. Anybody else? Yes, sir.

7 MR. RUFO: Thank you. Mike Rufo,
8 Xenergy. A couple quick follow-up points. I
9 think I only used two minutes last time, so with
10 my remaining eight I could perhaps do Hamlet's --

11 COMMISSIONER LAURIE: No.

12 MR. RUFO: Okay.

13 (Laughter.)

14 MR. RUFO: Ed Vine made the bulk of my
15 first point, the need for technical bottom-up
16 analysis of the potential in this process.
17 Related to that I think we also need in the staff
18 papers a discussion of the market barriers that
19 are in the market, and I think I slightly disagree
20 with Mr. Ely on this that there is an economic
21 model for what we're doing, particularly around
22 market transformation. And there's plenty of
23 literature out there. And I think some of that
24 should be incorporated into the needs discussion.

25 Relates that I think the need in funding

1 paper needs to include on the historic side
2 documentation of the benefits in the programs.
3 There's a lot of information in there documenting
4 the cost of the programs. There's tables at the
5 end on benefit/cost ratios.

6 But in order for this to be palatable
7 and understandable and digestible by a variety of
8 different audiences, we need to characterize the
9 benefits in terms of at a minimum energy savings
10 and converting those energy savings into things
11 that people can relate to, like power plants and
12 emissions, in ways that organizations like
13 American Council for an Energy Efficient Economy
14 have presented those analyses effectively at the
15 federal level before.

16 So I think we need a package of the
17 historic benefits and communicate those in a way
18 that's going to be understandable to the
19 Legislature.

20 And not just energy savings and
21 pollution, but also there have been some market
22 effects documented from these programs and those
23 should also be captured in the historic analysis.

24 Thank you.

25 COMMISSIONER LAURIE: Thank you, sir.

1 Okay, anybody else?

2 Mr. Goldstone, is this part of staff's
3 comments, or is this an independent --

4 MR. GOLDSTONE: This is the response to
5 a couple comments I heard this morning.

6 Sy Goldstone, Energy Commission. I
7 noticed several people referred to the need for a
8 clear set of principles, an economic model. Mike
9 Rufo just pointed out that there is a lot of
10 literature on market transformation. I think he's
11 right about that.

12 But what we haven't done is synthesize
13 that literature in a way that clearly articulates
14 principles that would allow us to establish a
15 public policy and measure whether or not we're
16 realizing objectives.

17 So I think that is an important point
18 that I just want to agree with what other people
19 have said this morning.

20 COMMISSIONER LAURIE: Okay, thank you.

21 We'll see you back here at 1:00.

22 (Whereupon, at 11:55 a.m., the workshop
23 was adjourned, to reconvene at 1:00
24 p.m., this same day.)

25

1 AFTERNOON SESSION

2 1:08 p.m.

3 COMMISSIONER LAURIE: Sy. Lynn, did you
4 want to make an announcement? Why don't you come
5 up to the microphone so we can hear you.

6 MS. MARSHALL: A couple of people this
7 morning raised the question of -- made the point
8 that we need to be doing analysis of technical and
9 cost effective potential. And we are working on
10 this, looking at what's the current cost effective
11 potential and doing a forecast of that, and
12 looking at the implications of cutting funding to
13 zero, and possibly holding funding constant.

14 And as we have results of that available
15 we'll put it on our webpage for your comment.

16 Thank you.

17 MR. WILSON: To start the afternoon
18 session we have Chuck Imbrecht, Chuck --

19 (Laughter.)

20 MR. WILSON: -- Goldman, sorry, past
21 life, whom we asked to come and speak because of
22 his extensive experience in California as well as
23 other states. And he's going to give a short talk
24 about the work that he's done in other states.

25 MR. GOLDMAN: Thanks, John. I'm not

1 sure how short the talk's going to be. Depends on
2 when you cut me off.

3 MR. WILSON: Take as much time as you --

4 MR. GOLDMAN: Well, okay.

5 MR. WILSON: Maybe I shouldn't say that.

6 (Laughter.)

7 MR. GOLDMAN: What I was asked to do by
8 John was to talk about administrative structure
9 options for energy efficiency in other states.

10 I'm going to talk about how other states
11 are approaching governance and administration of
12 energy efficiency programs and what some of the
13 implications might be for different models that
14 are evolving in other states.

15 So there's going to be two focuses of
16 the talk. I'll try to summarize what some of the
17 other case studies of what other states are doing
18 in terms of administration of energy efficiency
19 programs.

20 And then just sort of step back from
21 that and talk about some of the administrative and
22 governing structures, three models that are sort
23 of out there. And talk about some of the issues
24 and tradeoffs that are involved in each of those
25 models.

1 So that's where we're going over the
2 next 25 minutes or so.

3 I'm not sure people can see this slide
4 very well. For most of these slides I'll be
5 talking about the full spectrum of public purpose
6 programs. I'm going to just focus today on energy
7 efficiency.

8 In Rhode Island -- and we're going to
9 start from structures that basically keep more
10 with the traditional model. The tradition model
11 is defined as in most states, having a Public
12 Utility Commission oversee electric utilities. And
13 that's where we're starting from prior to
14 restructuring in almost all states.

15 In Rhode Island basically the PUC
16 oversees about \$17 million a year public goods
17 charge funds. And the basic approach that they're
18 using is they have collaboratives that have
19 evolved over the last four or five years that
20 develop program designs and recommendations for
21 funding allocation of budgets, which are submitted
22 to the Commission for approval. And the utilities
23 design and administer the programs. So that's
24 basically how it works.

25 What's new in Rhode Island was they

1 expanded that to include renewables and they had a
2 statewide collaborative group that developed a set
3 of policies and programs for renewable energy.

4 I'm not going to spend a lot of time on
5 some of these early ones, spend more time on some
6 of the later states that are closer to what's
7 being considered in California.

8 In New York what happened was there was
9 not a statewide legislation, there was individual
10 settlements with the investor-owned utilities in
11 that state. And basically the Public Service
12 Commission got the utilities to get out of the
13 way, and turn over their energy efficiency funds
14 to NYSERDA, which is a nonprofit state corporation
15 that's been around for 15, 20 years in New York
16 and has had a mandate to do work in lots of areas
17 from R&D to energy efficiency to renewables.

18 And so essentially NYSERDA's mandate
19 expanded significantly as a result of taking over
20 the stewardship of about \$100 million a year in
21 public benefits funds. I think the energy
22 efficiency portion of that is something on the
23 order of 30 to 40 million. I may be wrong about
24 that number, but something in that ballpark.

25 The key thing to note about NYSERDA is

1 how they're managing the energy efficiency
2 program. What they basically had to do is they
3 had to submit a plan to the Public Service
4 Commission about the programs, the program
5 designs, some of the rough budget allocations that
6 was approved by the PSC for a three-year period.
7 There's some requirement to evaluate the program
8 after three years.

9 And what NYSERDA is doing is that
10 they're basically putting out competitive
11 solicitations to implement various types of
12 program activities in various markets.

13 They also have the option, the utilities
14 if they want to continue to run some of their
15 programs they can make their case to NYSERDA.
16 Information programs, things like that. And I
17 think in a couple areas that's happening, but it's
18 a pretty minor activity.

19 Also the utilities were still finishing
20 up running some programs they've had from the old
21 DSM bidding era, so there's some contracts that
22 are sort of finishing up in New York.

23 But the key point to note is that
24 NYSERDA did not have to use state procurement, and
25 they are not civil service folks who work for

1 NYSERDA. So you have very flexible procurement in
2 New York, and they were able to get up and running
3 and hire lots of people in different markets to
4 start their programs.

5 Wisconsin. Wisconsin has been involved
6 in a pilot program in one utility service
7 territory. That's the Wisconsin Public Service
8 Corporation, which is the Green Bay area.

9 And in this case this utility basically
10 said to the PSC, we don't want to do DSM anymore.
11 We're tired of the stuff. It's too much hassle.
12 So they basically cut a deal where they turned
13 over \$16.75 million for two years to be
14 administered by the department of administration,
15 which is essentially their energy office.

16 And that department of administration,
17 DOA, put out a plan which was approved by the
18 Public Service Commission, which talked about six
19 or seven program areas, had budgets for those
20 areas. Talked about how they were going to run
21 things.

22 And the original concept was was that
23 they were hoping that this would be the model. In
24 Wisconsin they were going to pass -- they just
25 passed legislation last week, statewide

1 legislation, which I believe allocates about \$78
2 million a year for energy efficiency, which will
3 also be administered by the department of
4 administration.

5 But this is where the two-year pilot
6 just sort of tested out. And the reason I
7 highlight this is because it seems like it's a
8 little bit close to option C that the Energy
9 Commission Staff has sort of talked about.

10 In Wisconsin the department of
11 administration, the state energy office basically
12 has a grand total of five staff. We're retalking no
13 staff. And they basically included -- and the
14 legislation when they passed this said no more
15 staff.

16 And so they basically concluded very
17 early on that they'd have to hire it out. And so
18 they basically, they're using state procurement in
19 Wisconsin, they're all civil service, the five
20 people. And they are -- last year they've hired
21 six contractors to administer these pilot
22 programs.

23 And they decided the funding
24 allocations, the DOA, through some process, and
25 they have a pretty large evaluation budget. They

1 have budget for commercial industrial markets.
2 They have a standard performance contract type
3 program which is different than we have in
4 California. Some residential programs, some
5 marketing, advertising kind of programs.

6 I would not at all look at them as a
7 model. The programs are running, but
8 conceptually, which was -- administer the program,
9 I think they have some lessons. Because they
10 basically, you know, sloged through the state
11 procurement in Wisconsin.

12 They issued RPs, they typically had
13 anywhere from three to six bidders from each
14 program area, and they selected them. They had a
15 couple appeals, protests held things up for about
16 six months in a couple of the markets. But they
17 got better. And so now they have everybody on
18 board.

19 The problem is they didn't have enough
20 time. It took them probably a year to get
21 everybody on board for a two-year pilot. And if
22 the money is not spent it gets returned to the
23 utility, to the ratepayers.

24 One of the interesting things in
25 Wisconsin was that the utilities, because they're

1 not restructuring Wisconsin, they basically said
2 no utility affiliate can be the administrator.
3 And they determined that any utility affiliate of
4 any company anywhere in the U.S.

5 And so they eliminated a number of
6 consulting firms that happen to be owned by
7 utilities, like Xenergy.

8 (Laughter.)

9 MR. GOLDMAN: But it's a case in which
10 the irony is that the PUC staff insisted on
11 utility affiliate rules, and then the utilities
12 insisted on no other utilities from another state
13 being able to bid because the market wasn't open
14 in Wisconsin.

15 Question, Commissioner?

16 MS. TEN HOPE: I had a question. What
17 kind of firms then did you see actually bidding
18 and being successful?

19 MR. GOLDMAN: Consulting firms. All
20 consulting. These are essentially, these are
21 Hagler Bayee has the evaluation contract.
22 Schiller & Associates is the administrator here.
23 There's a company called -- Supply Systems is one
24 of the winners. Delta Technologies. These are
25 typical energy efficiency consulting firms that

1 have been around for 10, 15 years in most cases.
2 Not owned by utilities.

3 COMMISSIONER LAURIE: Did DOA develop a
4 strategic plan, a plan to which the six areas
5 responded to -- the DOA had --

6 COMMISSIONER LAURIE: Did they hire that
7 out?

8 MR. GOLDMAN: -- as a state energy
9 office, DOA had a set of existing state programs.
10 A small number. And they tried to interface those
11 programs to the extent they could with the
12 programs they'd like to see in those markets from
13 these funds, as well.

14 They put out a strategic plan. Had an
15 extensive comment period on it. Got some comments
16 on it. And it was looked at by the Public Service
17 Commission. And so they did have that kind of
18 process.

19 The Northwest. In the northwest what
20 we've seen happen is one side of this approach
21 that was put forward by the power plant council
22 several years ago about how energy efficiency
23 would continue in a restructured era has occurred.

24 The Northwest Energy Producers Alliance
25 is alive and well. It's been going for two or

1 three years now. It actually just got approval
2 for the next round of funding, I think.

3 It's a very -- it's a nonprofit entity
4 that was created three or four years ago. Very --
5 governance structure. Six investor-owned utility
6 representatives, six public utility members, six
7 public and six munis coops and six public members.

8 And they had to deal with representation
9 and voting rights and things like that. Hired an
10 executive director, and worked in a 15 staff.
11 Very professional, not civil service, pretty
12 highly paid. Very flexible procurement
13 approaches.

14 And by all estimation out there, very
15 very successful in terms of being able to move
16 very quickly and put out solicitations and focus
17 on market transformation. They're focused -- they
18 had a very -- pretty focused effort in terms of
19 doing upstream and downstream kind of market
20 transformation programs.

21 The original idea of the northwest was
22 interesting was that it was envisioned that the
23 utilities would still offer lots of energy
24 efficiency programs that were different from
25 regional efforts. Information type programs,

1 possibly rebate programs, things like that.

2 Very few utilities in the region have
3 stepped up to the plate to actually offer that and
4 get approval by their PUCs. But in the original
5 northwest model it was envisioned that there would
6 be different institutional arrangements for the
7 region. And depending on the kind of program,
8 kind of activity that would occur.

9 What really happened is all the
10 utilities basically said we're happy with
11 contributing to the alliance, DPA contributes
12 about 50 percent of the funds, and there's not a
13 lot of effort at the -- there's some exceptions,
14 some of the local utilities, Seattle City and
15 Light and Eugene Water and Power, but a lot of the
16 investor-owned utilities are not doing that much.
17 Portland General's --

18 So actually this thing might ultimately
19 start to look -- it may take longer than people
20 thought it would to actually happen, but you might
21 see in the region some substantial efforts by some
22 of the UDCs in a couple of the areas.

23 COMMISSIONER LAURIE: Chuck, is the
24 Alliance a nonprofit corp?

25 MR. GOLDMAN: It's a nonprofit

1 corporation.

2 MR. ELY: Chuck, who is independent or
3 who has been or who might be independent enough to
4 evaluate and come to the conclusions that you did
5 this is -- how do you get the -- you were far
6 enough away from the process, never worked with
7 them, of course, was not part of the process. Who
8 evaluates this?

9 MR. GOLDMAN: I believe that as part of
10 the three-year review they had an independent
11 audit was done --

12 And lots of suggestions about how their
13 board functioned, which our board certainly could
14 learn from. And how --

15 (Laughter.)

16 MR. GOLDMAN: -- board and staff, and
17 decision-making process. So they had some kind of
18 audit, sort of a manager type audit. -- have
19 programmatic type audit, but it was market. They
20 said that -- all their evaluations are on their
21 webpage and published. So you can get a sense of
22 market progress in the different markets they're
23 focusing in.

24 They certainly have some success
25 stories.

1 They had to convince people and four
2 legislators and BPA to continue.

3 MR. ELY: So the programmatic response
4 of the moment, going independent --

5 MR. GOLDMAN: I think they're the PUCs
6 mostly. I think they had to convince one
7 legislature in one of the four states.

8 Question?

9 MS. CASSERES: Can you describe a little
10 bit about how they get their funding? I know they
11 get funding from a variety of sources and that
12 might be relevant to this audience.

13 MR. GOLDMAN: Originally I believe --
14 are you talking about the Alliance now?

15 MS. CASSERES: Yeah, isn't --

16 MR. GOLDMAN: The Alliance got
17 contributions, BPA basically provided lots of
18 initial funding, over 50 percent. The state PUCs
19 then approved in rate cases or various settlements
20 funding from the other distribution companies to
21 contribute to the -- they took a share based on
22 some kind of formula. And I think the munis
23 contributed in some fashion, as well. I don't
24 know the details of how the funding allocation.

25 I actually believe that BPA's portion

1 represented most of the muni contribution. BPA
2 was like 60 percent, 65. Peter may know more
3 about this one than I do.

4 MS. CASSERES: There's no independent,
5 like --

6 MR. GOLDMAN: They don't have an
7 installation that takes the money. They basically
8 get the money directly from the utilities and BPA.
9 Because they're nonprofit it hasn't been a
10 problem.

11 They spent a lot of time up front
12 dealing with governance; the first three to six
13 months were spent hashing out voting rights and
14 bylaws and constitutions and things like that,
15 about how they were going to deal with this.

16 Question in the back?

17 MS. GUILD: No. I was just going to
18 clarify. My understanding is that the utilities
19 were just basically matching what BPA did, between
20 the IOUs and BPA.

21 MR. GOLDMAN: Okay, that would be better
22 information than I have.

23 MR. MATTHEWS: Got two questions, Chuck.
24 One, how long did it take, and were there any
25 problems in setting up the nonprofit. And

1 secondly, how did they resolve the tax issues that
2 you fought.

3 MR. GOLDMAN: I was afraid you were
4 going to say --

5 (Laughter.)

6 MR. GOLDMAN: You know, I don't know, I
7 never asked Margie this question. The tax issue -
8 - well, they went through one executive director
9 before they got to Margie --

10 (Laughter.)

11 MR. GOLDMAN: The executive director did
12 not last very long. There were -- I don't know,
13 in relative terms compared to what I see in
14 California, they did a heck of a job of setting it
15 up.

16 There was a broader consensus among the
17 parties about the vision and where they wanted to
18 go, what the policy objectives were than what I've
19 seen in the last two, three years.

20 COMMISSIONER LAURIE: What are the tax
21 issues?

22 MR. GOLDMAN: Tax issues are there was
23 an IRS ruling a number of years ago -- had to do
24 with Edison, that basically says if you -- that
25 the funds that you put out for incentive dollars

1 were taxable, if a customer got those funds.

2 MR. MILLER: Peter Miller with NRDC.

3 Utilities are transferring money to an
4 organization, a private organization. The
5 question is that income to that organization, you
6 know, I guess if they're established as a
7 nonprofit then there's no tax.

8 But the dollar, you know, the IRS will
9 follow the dollars wherever they go. And there's
10 questions about whether there's going to be tax on
11 that, on each transaction.

12 The other question, too, was how long
13 did it take the whole thing to get up and running.
14 I think it was about nine months from the start of
15 the negotiations to actually having an
16 organization that was in place, something like
17 that.

18 COMMISSIONER LAURIE: When you talk
19 about tax on a transaction --

20 MR. GOLDMAN: Well, one important point
21 an organization, the region benefitted very much
22 because some of the important agencies -- people
23 staff. The Power Planning Council, BPA lent the
24 Alliance staff, start-up staff to get started
25 before they -- and that really made a big

1 difference as they started the hiring process.

2 MR. MILLER: The tax on the transaction
3 question is for example, under the PUC's plan
4 using -- if the PUC had hired a private
5 administrator wouldn't the dollars then become
6 taxable, because they were going to a private for-
7 profit entity?

8 MR. GOLDMAN: That was a big issue.

9 MR. MILLER: So it was not clear?

10 COMMISSIONER LAURIE: I'll have to ask
11 my folks because I don't understand that. I mean
12 nonprofits do their -- hire contractors all the
13 time. And their income is not considered taxable.

14 So I'm going to have to do some in-house
15 examination.

16 COMMISSIONER PERNELL: Did you say this
17 was for-profit entity?

18 MR. MILLER: Yeah, if the PUC had hired
19 a for-profit administrator.

20 MR. GOLDMAN: California we were
21 considering -- for profit, for nonprofit were
22 eligible to bid. So in this issue was on the
23 table, and I don't think we ever got it resolved
24 legally with legal advice.

25 COMMISSIONER LAURIE: Okay, but if the

1 Alliance, being a nonprofit corp, then contracts
2 for implementation, that should not affect the
3 taxability of the funds flowing into the nonprofit
4 corp.

5 MR. GOLDMAN: I don't think they had a
6 problem with it. But I think it was something --
7 certainly I would suggest it's worth checking out
8 and talking to Northwest Alliance about how
9 they're dealing with the issue.

10 MR. ABELSON: Yeah, Chuck, David Abelson
11 with the legal office. A couple of questions on
12 your presentation today, if I could drop back to
13 the NYSERDA model first, and then a little follow
14 up on the Northwest Alliance model.

15 My understanding, and I have simply seen
16 validations whether I'm correct or wrong, my
17 understanding with regard to NYSERDA is a couple
18 things. Number one, it was an institution that
19 was already in existence, so it didn't need to be
20 created.

21 Number two, I talked with their legal
22 counsel last week, and my understanding is that
23 the laws in New York expressly exempt the
24 authority and other authorities from state
25 contracting law. But that was because the laws in

1 New York do that.

2 MR. GOLDMAN: Right.

3 MR. ABELSON: So you can have the laws
4 in California do that without creating a new
5 entity, would that be your understanding as well?
6 I mean basically --

7 MR. GOLDMAN: Yes, both of your
8 statements I've been told are true.

9 MR. ABELSON: Now, moving on to the
10 Northwest Alliance model, which I know nothing
11 about --

12 MR. GOLDMAN: One point. If you see the
13 RFPs that NYSERDA's put out, they're real good.
14 Very flexible. It's the kind of procurement that
15 we would really like, as the utilities often do in
16 California, they're RFQs, they're really
17 appropriate for the kind of programs that you're
18 looking for. They have a lot of flexibility.

19 MR. ABELSON: Right. On the Northwest
20 Alliance, first of all, as I understand it, it was
21 an attempt to get together an interstate effort,
22 more than one state?

23 MR. GOLDMAN: Right.

24 MR. ABELSON: Was there any entity that
25 existed at the time that could have done that had

1 they chosen to give it to that entity?

2 MR. GOLDMAN: The Power Planning Council
3 did some of the planning functions, but never did
4 some of the implementation functions.

5 Yes, there was clearly BPA. And, in
6 fact, part of the reason probably the Alliance was
7 formed was because people didn't want to keep it
8 active.

9 But prior to the Alliance, BPA ran a
10 whole suite of energy efficiency programs. They
11 didn't tend to do the same kind of programs the
12 Alliance has done. BPA's programs tend to be much
13 more downstream customer rebate financial
14 incentive type programs. And the Alliance is,
15 with some exceptions, has tended to be more
16 upstream. But the Alliance does offer a suite of
17 information type programs, what they call
18 infrastructure programs, with supporting local
19 codes and standards and building officials and
20 training. Things that BPA also used to do quite
21 extensively.

22 MR. ABELSON: My two other related
23 questions on the creation of the Alliance and what
24 its obligations are, number one, was it in any
25 sense created by the state -- I mean how did it

1 come into existence? Just formed sui sponte, or
2 was it directed by some sort of pact between the
3 states?

4 MR. GOLDMAN: I don't believe it was the
5 states, I believe it came out of the northwest --
6 well, it implicitly came out of the states. The
7 Power Planning Council has representatives from
8 the four states on their governing board.

9 And the Power Plant Council, through an
10 extensive public input process, created a regional
11 plan that had a vision for what public purpose
12 programs would look like after restructuring. And
13 so the Alliance was the first attempt to
14 operationalize that and implement that vision.

15 But there was some buy-in by state
16 representatives who sit on the Power Planning
17 Council Board.

18 MR. ABELSON: And then my last question
19 would be for the Alliance, to the extent that
20 they, in fact, are not using state procurement
21 practices, first of all they're multistate, so I'm
22 not sure which procurement practice they would
23 use. Is that anything that the Power Council or
24 whoever it was that created them, expressly
25 exempted them from? How did they come to be free

1 from those obligations for public funds?

2 MR. GOLDMAN: I'm not sure, as a
3 nonprofit corporation, that they ever even had to
4 deal with that issue. Because the source of funds
5 was never state funds.

6 They got money from BPA and they got
7 rates from investor-owned utilities. So it never
8 was even an issue. Shouldn't be an issue here.

9 Will?

10 MR. NELSON: Yeah, just a couple of
11 funding level questions. That 65.5 million,
12 that's annual?

13 MR. GOLDMAN: No, that's a three-year
14 total.

15 MR. NELSON: That was for the three-year
16 period?

17 MR. GOLDMAN: Yes. Roughly about --
18 this was the Power Planning Council
19 recommendation, this is what they ultimately got
20 for that three-year period, 65. It's about \$20
21 million a year, \$25 million a year.

22 MR. NELSON: But have they now jumped in
23 to the \$210 million per year up at the top?

24 MR. GOLDMAN: No. Again, this list --

25 MR. NELSON: That was a recommendation

1 that --

2 MR. GOLDMAN: Will, this was the plan,
3 this has not happened. The only thing that's
4 actually happened is the \$65 million and I believe
5 in Oregon recently there's been some recent
6 decisions that will have some funding for
7 utilities. But they have not come up with these
8 kind of dollars.

9 MR. NELSON: And then just to check, in
10 New York, it was \$40 million, the energy
11 efficiency portion roughly? I think that was the
12 number I heard you say.

13 MR. GOLDMAN: That's what I said, but
14 I'm not positive of that --

15 MR. NELSON: Okay.

16 MR. GOLDMAN: It was substantially less
17 than what the utilities in New York were spending
18 on DSM prior to restructuring. In New York, they
19 took a significant hit, probably a 50 percent cut
20 from what utilities spending was in like the 96/97
21 year, and again it was -- and it was a pretty
22 hostile environment they were working in.

23 MR. NELSON: Thank you, and if I could
24 just briefly, the question about taxation, you
25 know, I think in theory, Commissioner Laurie,

1 you're correct about how nonprofits can conduct
2 themselves. But the IRS, anytime an entity starts
3 handling large amounts of money they take a look
4 at it.

5 And that's why there was uncertainty, I
6 think, because of the amounts of money, and I
7 believe from my following the issue with the CB it
8 looked like it was headed towards, it was going to
9 need an IRS ruling of some sort.

10 MR. GOLDMAN: There was --

11 MR. NELSON: Yeah, when you reach
12 amounts of that level rulings are sought.

13 MR. GOLDMAN: Okay, the last state model
14 list, Vermont, which is one that's just getting
15 started. I've actually been working there helping
16 them design and write their R&D, the higher energy
17 efficiency utility.

18 Vermont's approach was actually passed
19 in legislature, and they had a law that was just
20 passed six months ago. It came out a memorandum
21 of understanding between the 21 utilities. And
22 their Department of Public Service, which is their
23 CEC, their state energy office.

24 And the model in Vermont basically came
25 out of the DPS plan two or three years ago called

1 Power To Save, which had a vision of how Vermont
2 would function in a post restructured environment.

3 And it basically was this. The problem
4 they have is 21 utilities. And you do have a
5 couple big ones, it's very fragmented. They
6 decided that they wanted to run seven core
7 programs focusing mostly on lost opportunity type
8 programs, new construction, equipment replacement,
9 remodel, they have low income and dairy farms.
10 They have equity programs and loss opportunity
11 programs.

12 Basically said that the competitive
13 market will take care of retrofit by and large.
14 They have some funding allocated for retrofit
15 market type stuff, but not huge.

16 So, if you look at their plans very very
17 focused in terms of the kind of programs they want
18 to run. And the basic models from governance
19 point of view is they have got the contracts
20 between the board and the utility.

21 The board has put out R&Ds to hire a
22 fiscal agent which will be a one-person sort of,
23 you know, accountant, who will collect money from
24 the 21 utilities and pass the money to the energy
25 efficiency utilities, and they're going to hire,

1 the board's going to hire a contract
2 administrator, one person, who will be the board's
3 day-to-day person who will be the contract
4 manager, essentially, between them and the energy
5 efficiency utility.

6 Again, this is a small state, 500,000
7 people, and they have a little bit more
8 flexibility than we have in California.

9 The RFP is a draft, it's available. It
10 will probably be -- they hope to put it out within
11 a couple weeks. And there's lots of -- the
12 interesting thing about Vermont is they definitely
13 learned some of the things from the mistakes that
14 we made in California. And it's unclear they're
15 going to be successful, as far as I'm concerned.
16 They still haven't -- they're just learning about
17 state procurement, you know, they assured us, we
18 told them about this, sort of what was going to
19 happen.

20 For example, there's some with the issue
21 now, they just found out that, you know, one of
22 the issues of the energy efficiency utility will
23 basically in their model will be the
24 administrator, the designer -- seven programs. So
25 in Vermont they have no distinction between, like

1 we did in California, the administration and
2 implementation.

3 They want the energy efficiency utility
4 to just worry about it. So they're not talking
5 about bond implementers -- distinction. They want
6 a very smart administrator. They're willing to
7 have people -- the facilities need are
8 subcontract, the stuff out, they can hire, it's
9 their choice.

10 But what they're finding out is whether
11 or not the implementers have to be hired through
12 state procurement. Their hope was that it would
13 be exempt, but they are going to find out pretty
14 soon whether that's the case.

15 Scott.

16 MR. MATTHEWS: What benefits --

17 MR. GOLDMAN: Oh, it's a utility in
18 Vermont because the utility is going to have a
19 contract with the board and is going to be
20 regulated, in quotes, by the board.

21 We asked them that question. That's
22 just a name that they came up with, calling it
23 energy efficiency utility. It's not a utility, I
24 think in the way that we would think about it, but
25 it's going to have a relation -- it's got a three-

1 year contract with the board and that's their
2 model. They're going to bid. You bid your
3 administrative costs. And it will be a time and
4 materials type contract. But it will be subject
5 to a planning process, a public planning process
6 that will be led by the Department of Public
7 Service, the energy office.

8 Renee.

9 MS. GUILD: What is the corporate
10 structure of the energy efficiency utility?

11 MR. GOLDMAN: The RFP basically allows
12 different types of firms to bid, just like they
13 did in California. That's about the corporate
14 structure.

15 So, for-profit consulting firms could
16 bid. The only -- it does say that the utilities
17 in Vermont cannot bid to be the administrator.
18 They're out. Utility affiliates could bid, but
19 the district utility cannot bid.

20 The district utility can certainly bid
21 to be implementers. And, in fact, as part of the
22 deal that they cut they have something called
23 MCDUs, these are coops and munis. Some of the
24 munis and coops basically have a right of first
25 refusal.

1 If the muni wants to run a program in
2 their area, one of the seven core programs, they
3 just say I want to run the program. And the
4 utility's got to hire it. So, that's the deals to
5 make this happen.

6 So it's very interesting, like a 50-page
7 memorandum of understanding, and lots of
8 intricacies in there that probably only needs in
9 Vermont.

10 MR. NELSON: You were saying it's not
11 resolved in the contract, these requirements will
12 be between the utility and the invitation
13 contractors?

14 MR. GOLDMAN: Right.

15 MR. NELSON: So if a utility --

16 MR. GOLDMAN: You'll see in the next
17 two, three weeks, I think.

18 MR. NELSON: -- the energy the utilities
19 bid, they have to come into the bid with all their
20 contractors in place and all their program
21 proposals in place, or do they come in just with
22 basically the --

23 MR. GOLDMAN: With basically what?

24 MR. NELSON: Do they have to come in
25 with their portfolio of programs and contractors

1 in place and then bid to be the EE utility, or can
2 they came in with basically just the shell on top
3 and say they're going to contract out --

4 MR. GOLDMAN: The RFP says -- should
5 read the RFP.

6 (Laughter.)

7 MR. GOLDMAN: The RFP says what the
8 preference -- the board is on a very fast
9 timetable, timeline. The utility will be hired by
10 December of this year. They're supposed to start
11 taking over by January of 2000.

12 So they are going to give preference to
13 people who are ready to roll. Because on a very -
14 - because the utilities are getting out of this
15 business quickly.

16 MR. NELSON: How is the board
17 constituted?

18 MR. GOLDMAN: This is a commission,
19 Will.

20 MR. NELSON: That is the commission?

21 MR. GOLDMAN: That's a three-person
22 commission --

23 MR. NELSON: Okay, thank you.

24 MR. GOLDMAN: -- appointed by the
25 governor.

1 MR. NELSON: A special commission or --

2 MR. GOLDMAN: It's a PUC, like our PUC.

3 They just have different names.

4 MR. NELSON: How many dollars?

5 MR. GOLDMAN: Well, you know, dollar
6 amount's small enough. It was supposed to be
7 between \$13 and \$16 million a year for five years.
8 I just saw a trade press announcement that said
9 \$7.8 million the first year. I guess they had
10 problems, I don't know why the funding got so much
11 smaller. But it's down to 7.8 million, and it
12 goes up to about 12 or 13 million over the next
13 three or four years.

14 On a mills per kilowatt hour basis it's
15 much higher than we have in California. Or a
16 percent of revenues, it's probably 2 or 2.5
17 percent. But it's a small state.

18 Question?

19 MR. ABELSON: Yes, Chuck, is the
20 difference, or at least one of the key differences
21 between the Vermont model as you're describing it
22 and the Wisconsin model as you mentioned it
23 earlier, in the Wisconsin model it appears that
24 basically the state energy office, they're
25 referred to as the Department of Administration,

1 hired six managers or administrators for six
2 different program areas. Is Vermont simply hiring
3 one overall utility administrator maybe because
4 it's a small program, or just because the model's
5 different?

6 MR. GOLDMAN: There's two big
7 differences. That's one of them. The other
8 difference is that in Wisconsin the contract
9 between the state energy office and these contract
10 managers, the PUC has a traditional role approving
11 the plan.

12 Here the contractors, they envision to
13 be between the board and the utility. They argued
14 about this. The DPS said well, we'll issue the
15 contract between us and the utility. Didn't work
16 out that way. The way the MOU reads, the contract
17 will be between their PUC and their utility, and
18 you're right, Dave, they're hiring essentially one
19 contract manager who will then hire lots of
20 implementers and subcontractors, hopefully not
21 through state procurement processes. That's their
22 hope. But it may not -- we'll see if it works out
23 that way.

24 Peter.

25 MR. MILLER: They both define the

1 specific program, -- very clearly defined
2 programs?

3 MR. GOLDMAN: Yes, that's a huge
4 difference compared to the problem we have in
5 California. If they're going to be successful in
6 Vermont it's because they have very well defined
7 programs and areas. I urge you to read the power
8 state planning. From my belief, it's the best
9 thing that I've read. And it really tries to
10 articulate what the role of public purpose
11 programs is in the structured environment versus
12 what you got -- market.

13 The Vermont? Called DPS' webpage, you
14 can find it.

15 Okay, I think I've used up all of my
16 time. I have much more slides about the models,
17 so it's your choice, I could stop right now or I
18 can continue.

19 COMMISSIONER LAURIE: Why don't you go
20 ahead and take it to 2:00. And then we'll just
21 bypass staff's presentation --

22 MR. GOLDMAN: Oh, you don't want to do
23 that.

24 Okay, so the second part --

25 MR. GOLDBERG: Question on Vermont.

1 When you say there are a lot of well articulated
2 programs there, can you describe that very
3 briefly?

4 MR. GOLDMAN: Sure. The document,
5 itself, Power To Save, is about 150-page document.
6 It lays out the program design for the seven core
7 areas. They have a low income program, very well
8 defined. They have a program targeted at just
9 dairy farms, which is another one of their
10 segments in Vermont, that's called an equity type
11 program.

12 They have a program for new construction
13 and a program for equipment replacement. They
14 give a program design, they give the budget, and
15 they give an idea about what the objectives are,
16 what the performance indicators are.

17 They lay out what our utilities do in
18 California today in their planning, that level of
19 specificity.

20 MR. GOLDBERG: And how do they
21 articulate the difference between a restructured
22 and a traditional utility environment?

23 MR. GOLDMAN: Well, there's a couple
24 differences, I think. Today in Vermont the 21
25 utilities run some programs very unevenly. Okay,

1 so one of the big problems in Vermont is they're
2 going to consolidate that with one utility, have
3 very high transaction costs at the board level
4 overseeing 21 utilities, even though two utilities
5 dominate the market.

6 The second difference is that utilities
7 don't run all these programs today. Utilities
8 today only run about one or two or three -- pilot
9 testing. So these are programs that are -- they
10 would consider to be more appropriate for what
11 should be left to do in public purpose programs.

12 They either will be done because of
13 equity considerations, because -- not going to hit
14 low income people, not going to go in residential
15 markets, or they're being done because they don't
16 think that in terms of lost opportunities, new
17 construction. But these are like time -- market-
18 driven events, which are not necessarily
19 susceptible to intervention by retail service
20 companies.

21 Does that answer your question?

22 MR. GOLDBERG: Yes.

23 MR. GOLDMAN: Okay. You step back from
24 these states, there are sort of three generic
25 options that we will consider, -- utility

1 administration, some type of nonprofit model, and
2 some type of work with existing state agencies.

3 And so what I list here is a number of
4 criteria objectively have in choosing
5 administrative options. And I brought some of the
6 stuff -- comes from the work in California that
7 was done two or three years ago by a working group
8 that Mike Messenger was involved in.

9 So I list the budget objectives here,
10 criteria -- policy goals, the oversight,
11 administrator -- and transition, sort of four
12 general categories of how you want to think about
13 choosing -- options.

14 And then I try to talk about some of the
15 considerations of each of these three options.
16 And in some cases you want to continue with
17 utility administration you have -- the fact that
18 many utilities have significant expertise and
19 infrastructure. They have a working relationship
20 with many upstream entities for many years.

21 Some of the big problems, utilities have
22 to do with perceptions of conflict of interest and
23 other market -- in the restructured world, but you
24 often have very well developed regulatory
25 oversight mechanisms, even though it can be pretty

1 bureaucratic. We certainly have experienced that
2 in California.

3 A lot of utilities have pretty well
4 developed way to input the feedback from market
5 stakeholders, but public outcomes may not be
6 compatible with financial utility holds. And
7 relative to the transition costs of probably the
8 lowest, and you have to deal with transition to a
9 new agency.

10 If you look at existing state agencies,
11 from -- energy efficiency markets are typically
12 not service territory defined, so from a sense of
13 moving towards state and regional markets, having
14 a state agency have oversight makes some sense.

15 You have to assess the ability of the
16 agency to meet the energy efficiency policy goals.
17 Most of the state agencies have been thrust into
18 this role. In some cases have very significant
19 staffing traits, or have historically had a much
20 more limited vision.

21 In Wisconsin's case, for example, their
22 agency ran low income programs, maybe even had
23 some work in schools and hospitals, but really did
24 not have any kind of experience running the set of
25 programs that they're now taking responsibility

1 for. Part of the reason they decided to out-
2 source it was because they knew they were over
3 their heads.

4 Yes, they just didn't have staff.

5 State agencies typically have low
6 conflicts of interest potential when compared with
7 private market. Public process may be well
8 developed. And one of the things that -- like a
9 suggestion, you need to look at the missions that
10 the agency has, and their track record versus what
11 you're asking them to do.

12 And one of my bugaboos is that I think
13 state procurement roles, they make it more
14 difficult to select best value type programs and
15 proposals. And some states have more flexibility
16 than others in that regard. And it's better if
17 you can get some kind of exemption from that.

18 Transition issues can be significant.
19 With nonprofits you spend a lot of time up front.
20 If you're creating a new nonprofit institution.
21 And I think it's possible to have an organization
22 that is where the form structure and mission are
23 really alive with policy goals. I think the
24 Northwest is an example of that.

25 But you spend a lot of time on

1 governance and accountability issues. And we've
2 been told that, you know, California was one of
3 the real show-stoppers. That basically when you
4 have the kind of money that we're talking about in
5 California, legislatures are very very reluctant
6 to trust that kind of funds to a nonprofit board
7 of directors.

8 But they've been able to do that in the
9 Northwest, and in New York they were able to do --
10 they have a nonprofit state corporation, so they
11 were able to sort of get around it, deal with that
12 issue, and it was an existing organization with a
13 long track record. So they had some success
14 there.

15 It's clear that a nonprofit will have
16 the most flexibility at competitive procurement,
17 but it's -- time and resources. Unless you have a
18 multi-year commitment to this process without your
19 time horizon, you need to think about that.

20 If you have the ability to hire and
21 attract qualified staff. And one of the key
22 issues that was really talked about publicly that
23 I think is really critical is you have to assess
24 where there's political will and support used to
25 create a new institution. That really was the

1 case in the Northwest. And I see in a lot of
2 other states, even though there's a need, you
3 know, where you have in some cases like I'm
4 working in New Jersey and other places, Texas,
5 there's a lot of conflict among the various
6 groups. But there's no institution that, there's
7 no will to create something new. So it's just not
8 going to happen.

9 This is something Joe and I did in one
10 of our papers that tries to think about how you --
11 this is very simplified and stylized. But when
12 you think about -- the first thing to look at is
13 you have to assess the utility's performance. If
14 the utility's performance -- a lot of times
15 utilities would either take themselves out of the
16 running because they don't want to do it anymore,
17 or their past performance is poor.

18 If their past performance is poor
19 there's no reason to think it's going to get
20 better in a restructured environment. The
21 incentives are going to be even less.

22 You have to assess their current
23 willingness and level of interest. If it's low,
24 then you need to do an alternative. You need to
25 think about the scope, implement the policies,

1 whether you have a real problem with fragmented
2 service territories or the scope of the utilities.

3 You need to think about mitigating the
4 conflicts of interest and incentive that the
5 utility has. If you conclude that those are
6 significant problems, then you go through the
7 duration of funding.

8 My own view is that you're looking at a
9 very short time horizon, less than three years.
10 It's not worth it to switch from the existing
11 provider. If you're looking out over a longer
12 period of time, five years or so, then it's
13 worth -- then you can think about it, depending on
14 your evaluation, of the performance of the
15 utility, things like that, whether or not it makes
16 sense to create some either new institution or to
17 have some different kind of arrangement.

18 If you decide that the utility approach
19 is no longer acceptable, then you have to look at
20 what are your alternatives. And you have to look
21 at the preexisting utility institutions, you have
22 to look at their capability, their governance,
23 their accountability, those kind of issues.

24 You know, state agencies are nonprofit.
25 And the nonprofit approach, you have to decide

1 whether or not you have what will support to
2 create or modify a new institution.

3 If you decide that you've got a state
4 agency you think is appropriate, you need to
5 decide whether or not you have a manual of state
6 procurement process in hiring procedures. Maybe
7 the answer is yes to those things, you may want a
8 state agency. If the answer is no, you may move
9 for a nonprofit corporation.

10 If you conclude and you go through this
11 process, and you look at your state agencies, you
12 conclude that they're just not up to the task,
13 well, you need to go back to looking at your
14 utility and figure out ways to manage and deal
15 with the conflicts, if you look through regulatory
16 means.

17 Because I think all the times, sort of
18 what we found out in California is oftentimes
19 you're in the world of second-best solutions. The
20 optimal approach may just not be workable. And so
21 that's the way the world is.

22 So I think I'll stop there.

23 COMMISSIONER LAURIE: Thank you, Chuck,
24 very much for your presentation. You're going to
25 be around for awhile?

1 MR. GOLDMAN: Sure.

2 COMMISSIONER LAURIE: Staff.

3 MR. MESSENGER: We're ready to go.

4 MR. GOLDMAN: Dave, you had one
5 question?

6 MR. ABELSON: Just a couple questions
7 here just before you begin.

8 I'm struck by the fact of two things,
9 Chuck, in your presentation about choices. One is
10 that at the end you sort of presented a set of
11 either/or choices, either you have a utility or
12 you have a nonprofit or you have a state agency
13 administering the program.

14 As I think you're aware, staff is at
15 least preliminarily recommending that perhaps some
16 combination gets you the optimal situation,
17 depending on what you're talking about.

18 And I gather that Wisconsin has at least
19 used some mix and match in the way they've
20 approached it?

21 MR. GOLDMAN: Yeah, Dave, I think -- I
22 did this two years ago, okay. This is the paper
23 that Joe and I did, two years old. And I think
24 you're right, I think that when I was thinking
25 about this a couple years ago, people were not

1 thinking about sufficient mix and matching and
2 more creative solutions and things like that.

3 And I would agree with you that
4 conceptually there's no reason why you have to
5 take one and you pass it all. You could
6 conceivably align program objectives and policy
7 objectives with different type of organizations
8 that make sense.

9 But oftentimes there just isn't the
10 political will to work with these kind of
11 complicated alternatives. It takes a lot of
12 process and consensus to be able to do something
13 more than just -- a lot of states don't want to
14 spend the time that California spends on these
15 things. They just want to -- they want to come up
16 with an answer quickly. And that's just what
17 they've done in a lot of places. They've
18 either -- they just either give it to a state
19 agency, gone to a nonprofit, or kept with the
20 utility. Just don't want to mess around for the
21 number of years that we've messed around with this
22 issue.

23 MR. ABELSON: My final comment is
24 actually just a word of caution in public
25 perception. One of the representations was made

1 with regard to the benefit of having a nonprofit
2 as a primary administrator is the ability to get
3 around state procurement rules which were viewed
4 as being a problem.

5 And at least in the limited research
6 that I've been able to do on this subject I've
7 found two things. One, in the case of NYSERDA,
8 they get around it because the state law told them
9 they can get around it. So you can do that
10 without creating a new nonprofit anytime.

11 Secondly, in other areas where there is
12 no such state law, and I have some California
13 Attorney General opinions in mind right now, at
14 the moment, and a nonprofit was created ostensibly
15 to get around. At least the attorney general's
16 view as that's not going to work.

17 If there's some sort of a governance, if
18 there's some sort of public funds involved, you
19 can't just hand those over to a nonprofit in large
20 sum and then say there will be no state
21 procurement rules absent legislation which, in
22 effect, says as much.

23 MR. GOLDMAN: These are rate funds,
24 they're not public -- these are not tax.

25 MR. ABELSON: Well, that's the issue,

1 right.

2 MR. GOLDMAN: That's a big issue. Once
3 you go down the view that they're public funds, I
4 think you're right, you get in all kinds of
5 problems.

6 MR. ELY: Chuck, you mentioned as a
7 preface that you saw no reason why a distribution
8 utility might not do better under restructuring.
9 Why did you say that?

10 MR. GOLDMAN: Would do better --

11 MR. ELY: -- wouldn't do as well as they
12 had previously?

13 MR. GOLDMAN: It would depend on their
14 ratemaking and how they would set it. But from a
15 corporate point of view, when you were doing
16 resource acquisition like we were doing in the 80s
17 and 90s, it was possible to offer incentives, it
18 was possible to deal with regulatory -- gave
19 utilities a reason to sort of procure energy
20 efficiency resources.

21 In the market transformation type
22 paradigm or you know, it's unclear why a utility
23 would be motivated to do that. And in fact, what
24 we've seen in lots of states, and one of the
25 reasons that California wanted to consider

1 independent RFP was because the financial
2 incentives that they had during the transition
3 period, there was a disincentive for them to
4 reduce sales.

5 MR. McNULTY: Mark McNulty, representing
6 San Diego Gas and Electric. The question I have,
7 I'm looking at AB-1105 and I don't have a word
8 counter on it, but it does look like it's a lot of
9 words. And I know it took awhile for them to get
10 AB-1105. That's the bill that created this
11 process.

12 MR. GOLDMAN: Here in California?

13 MR. McNULTY: Yes.

14 MR. GOLDMAN: Okay, I'm not familiar
15 with it.

16 MR. McNULTY: And I know that there were
17 other bills out there that never made it. And I'm
18 just curious based on your experience with all
19 these other states, how big of a bill would be
20 necessary to create \$240 million worth of
21 oversight and -- so that you could deal with all
22 these problems that we're talking about.

23 MR. GOLDMAN: Vermont legislation is
24 about 13 to 15 pages. Something like that. I
25 don't think any other state is actually -- every

1 other state -- states that have laws that just
2 keep it with the utility, like Rhode Island and
3 Massachusetts, the laws are much -- the laws tend
4 to be much shorter.

5 Typically they transfer oversight to
6 like in Massachusetts, their state energy office
7 is now doing a much larger role for oversight than
8 we had previously.

9 Most of these other cases they're not,
10 we don't have state legislation. It's happened in
11 the Northwest informally; it's happening in rate
12 cases in New York. And in Wisconsin I haven't
13 seen the legislation yet, to be honest.

14 Okay, thank you.

15 COMMISSIONER LAURIE: Thank you. Mr.
16 Sloss.

17 MR. SLOSS: Thank you, Commissioner
18 Laurie. Thank you, everybody, for being here
19 today. Chuck has given you an excellent overview
20 obviously of what's going on in the nation, and
21 the key issues involved in state agencies versus
22 nonprofits, so I'm not going to spend a lot of
23 time going into pros and cons, but just trying to
24 get into what the staff has done to come up with
25 the proposal today for discussion.

1 This is a staff proposal that came out
2 of a team, a staff team of several people from
3 throughout the Commission, who took a look at
4 several options with regard to how we might
5 organize the administrative functions, post
6 transition administrative functions.

7 COMMISSIONER LAURIE: Michael, I want to
8 confirm for the record that this has not, as yet,
9 been presented to the Committee.

10 MR. SLOSS: No, you're hearing it for
11 the first time, also. The fact is, not every
12 staff on the team even heard it before it got
13 here.

14 The staff team worked for some time to
15 first of all examine the functions that the
16 administrative structure would have to carry out.
17 And some of you who came to the October 1st staff
18 workshop have already heard this.

19 We came up basically with the five
20 functions shown over in this column from
21 governance, program management implementation,
22 delivery, program and market evaluation,
23 independent review.

24 What isn't shown up there, which is on
25 another chart that we did, were principles or

1 criteria for determining which kind of an
2 organization should carry out that part of the
3 function. These lines are not intended to be
4 precise demarcations between these functions.
5 It's perfectly possible in many scenarios where
6 the same entity could do multiple functions. So I
7 want to make that clear.

8 Under governance, it was our view, as a
9 staff, that inasmuch as this was a public goods
10 program, under the direction of the Legislature,
11 that the governance function would be carried out
12 by a public agency.

13 We came up with two ideas. Idea number
14 one, -- well, we came up with several options.
15 The one that's shown up here is the California
16 Energy Commission or what I've chosen to call an
17 authority.

18 The idea of the authority is that a
19 piece of legislation that would give an authority
20 responsibility for the carrying out of this
21 program. And at the same time might give them
22 some creative mechanisms for dealing with this
23 bugaboo we call the state procurement process.

24 The authority is, in my view, the
25 prototype, if you will, or the template, would be

1 financing authorities such as the California
2 municipal utilities will establish the financing
3 authority to run a specific project.

4 The board of the authority is the
5 municipal utility board. In this case our view
6 would be that the board of this authority would be
7 the California Energy Commission, but only acting
8 within the confines of their responsibilities as
9 the authority.

10 The legislation that created this might
11 also give you the opportunity to add other kinds
12 of membership and representation to the authority.
13 You wouldn't have to add staff just because of the
14 authority, because the Commission Staff would act
15 in that capacity.

16 Those are the two options.

17 The authority's responsibility would
18 include hiring the administrators, approving
19 budgets, doing the strategic plan for carrying out
20 the responsibilities of the program. This
21 probably, or in our vision, anyway, would be like
22 a biennial planning process, every two years, to
23 develop priorities for the coming two years. And
24 to make the changes in the program that are
25 necessary.

1 Program management or the administration
2 function. We thought of several options for this,
3 also. The key thing I will point out here is that
4 we have private firms, universities, local
5 governments, CEC, staff or certain things. I'll
6 show you a chart in a minute that shows how the
7 CEC staff fits into that.

8 You'll notice the utilities are not
9 included. This was an issue we argued back and
10 forth on and debated among ourselves. And the key
11 question was can utilities be administrators when
12 they have the dual objectives of selling power and
13 saving power.

14 And by not including them up there, this
15 is not to suggest that we've arrived at any
16 conclusion. I've received two proposals on
17 administrative structure since our workshop, one
18 from PG&E, one from NRDC from Peter Miller.

19 Both of those have substantial roles for
20 utilities and this kind of function. Maybe this
21 helps us just kind of talk about where the utility
22 role fits in within this function.

23 In our view when it comes to
24 implementation and delivery, which would again --
25 these would be chosen by competition and it could

1 include nonprofits as well as for-profit
2 organizations, the implementation and delivery
3 organizations would be selected by some sort of
4 competition, except in those very special cases
5 where we might want to have some research or other
6 things done where we're allowed to sole source.
7 But that, I would think, would be rather rare.
8 The utilities definitely have a function in here
9 as far as our staff view is concerned.

10 Program marketing and evaluation. This
11 we would think would be done by organizations or
12 an organization hired by the CEC and reporting to
13 the CEC. This would be a competitive solicitation
14 again. Some of this work also to be done by CEC
15 Staff for those areas where it would not be
16 appropriate for contracting out.

17 Independent review. It's our view that
18 we've had lots of talk in these workshops about
19 the role of the Legislature and how much to
20 involve them. They, in our opinion, are going to
21 want to be involved in this process. And we need
22 some way to give them input into how the program
23 is working, independent from what we are telling
24 them, if we are the governance authority, from
25 what we are telling them as the Energy Commission.

1 We would recommend a review panel
2 appointed jointly by the Legislature and by the
3 California Energy Commission that would maybe meet
4 only once or twice a year, would review whatever
5 research and data they needed to review, and would
6 provide information biannually to the Legislature
7 on the progress of the program. We would propose
8 that the Energy Commission would do the same
9 thing.

10 How might this look? For the sake of
11 argument I used for administrative the same kind
12 of breakdown basically that the CB has used,
13 residential, nonresidential and new construction
14 areas. It could be, as you notice in the writeup
15 it says three to eight, and we can divide these
16 markets and activities any possible way.

17 We recommended leaving the program
18 market evaluations as a separate unit outside of
19 those, that would be responsible for evaluating
20 what is going on. The delivery agents obviously
21 again would be selected by the program managers on
22 the basis of some kind of solicitation process.
23 Then the independent review panel reporting to the
24 Legislature, obviously communicating with the
25 Energy Commission on the progress of the programs,

1 whether or not we're meeting objectives, whether
2 we're carrying out the intent of the Legislature,
3 and whether we're actually producing the public
4 goods program.

5 Within the whole idea again I'll put out
6 for the sake of discussion the state procurement
7 process, we didn't view as a fatal flaw in our
8 system. And I know all the problems everybody's
9 had, I've had with that process.

10 We can identify those areas that need
11 amending, changing, made more efficient. We can
12 propose those to the legislative process, and
13 there may be other things we can just do through
14 interdepartmental negotiation with General
15 Services and others before we get started.

16 And I went through that quickly because
17 of time, but that is in essence the proposal. We
18 did look at -- 1105 says we are to consider a
19 nonprofit enterprise as the administrator. For
20 much the same issues that Chuck put up with the
21 creation of a nonprofit, the amount of time it
22 might take, the issues of governance, and how that
23 nonprofit would function and be directed, it was
24 our view that that time and that cost outweighed
25 the benefits that might come from the use of a

1 nonprofit entity administrator.

2 COMMISSIONER LAURIE: Michael, who would
3 you anticipate would qualify for program
4 management? And let me ask you specifically about
5 utilities. Would you sense that statutorily or by
6 the rules to be developed by the governing
7 structure that the utilities would be barred by
8 the rule, or would you develop criteria under
9 which the utilities may or may not be qualified
10 under?

11 MR. SLOSS: From my perspective, first
12 through some sort of a process determine whether
13 or not this issue of is there a conflict with the
14 sale of kilowatt hours and the savings of kilowatt
15 hours.

16 That may not be something that -- we may
17 be worrying too much about that issue. If that's
18 true, then obviously utilities could be part of
19 the organizations that bid. What I would think
20 would be criteria are the types of companies that
21 would be bidding in here would be those that met
22 some sort of criteria that we would establish,
23 probably through a public process, in terms of the
24 skills and abilities and knowledge of the
25 organizations of the market or the area that we

1 wanted them to manage.

2 And if utilities fit into that and if we
3 resolve that other issue with them, then they
4 would be part of the package.

5 COMMISSIONER LAURIE: Thank you.

6 MR. SLOSS: Lawyers aren't allowed to
7 ask questions. Oh, I'm sorry. Bob, I let you,
8 didn't I?

9 (Laughter.)

10 MR. SLOSS: Okay, Dave.

11 COMMISSIONER LAURIE: That rules out
12 about three-quarters of the people in this room.

13 MR. ABELSON: I just have one question,
14 Mike, on a word that happens to appear in number 5
15 on independent review, that at least when we
16 presented it at the workshop on the first was not
17 the word of choice.

18 You have the private panel, the
19 independent panel composed of, the word here is
20 stakeholders. And PIER, as you know, which I
21 think was sort of the staff model we were looking
22 at because we do have an independent panel that's
23 evaluating PIER right now, is actually largely
24 comprised of folks who are not stakeholders, in
25 order to insure their independence.

1 I guess I'm just asking clarification.
2 Is it staff's intention to create an independent
3 panel that is comprised of stakeholders or to
4 create an independent panel composed of members
5 appointed by CEC and Legislature?

6 MR. SLOSS: Well, it was my thought that
7 stakeholders would be on that panel because they
8 would have a knowledge of what was going on.

9 I think we would just have to -- I
10 agree, we did have the other concept defined
11 before. And either one would work. I guess it's
12 whom you want included in the process.

13 COMMISSIONER LAURIE: Let's go ahead and
14 ask questions. What I'd like to do is have
15 questions posed, rather than have a debate which
16 we will have plenty of opportunity for at a later
17 time. But have questions for clarification, I
18 think, are appropriate.

19 At this time, Michael, why don't you
20 just go ahead and do that.

21 MR. SLOSS: Well, Commissioner Laurie,
22 too, I would invite folks who want to present a
23 different template, too. You know, people have
24 brought with them a different perspective and idea
25 on how this should be organized, this would be a

1 wonderful time to bring --

2 COMMISSIONER LAURIE: Yeah, that's next.

3 And we will ask for that.

4 But I'd like to use the next few minutes
5 for questions seeking clarification on staff's
6 proposal.

7 MR. SLOSS: Sure.

8 COMMISSIONER LAURIE: Why don't you just
9 go ahead and take it.

10 MR. SLOSS: Michael.

11 MR. MESSENGER: Have you had the time or
12 do you envision having the time analyzing the CEC
13 staff requirements for either the current
14 proposal, the multiple administrators option C, or
15 the nonprofit option B?

16 MR. SLOSS: No and yes. We have not
17 done a specific analysis of how much staff it
18 would take, or resources, period, to do either
19 one. Obviously before there is actual -- the
20 assumption that again our group made, or that I
21 made, was that this, the administrative structure
22 gets implemented through some sort of legislative
23 process.

24 And prior to that process or legislation
25 actually being drafted and submitted, we would

1 have to make some very reasoned determinations
2 what our resource requirements are, and what they
3 organizational impact, if it's us, if it's the
4 Energy Commission, and what the organizational
5 impacts are on the Energy Commission.

6 MR. MESSENGER: I think staff has done a
7 little work on a model similar to the one that
8 you're presenting --

9 MR. SLOSS: Previously, right.

10 MR. SUGAR: -- done that previously, so
11 we have some ideas. It's not clear to us how a
12 nonprofit would function. And so depending on
13 what Dave Abelson's review provides us, we may be
14 able to make some kind of an estimate.

15 But that depends very much on what the
16 Energy Commission's role will be vis-a-vis, you
17 know, a single entity like a nonprofit.

18 MR. MESSENGER: And, Mike, the final
19 really quick question is it seems to me for all
20 these models it's pretty important to be very
21 explicit about what we mean by an expedited
22 procurement process. And what that would look
23 like and the likelihood that the Legislature would
24 accept that is, I guess, the second question.

25 Is that something that you envision in

1 the next 30 days, we're going to have to develop
2 the specifics of what kind of an exemption, or
3 what we mean by expedited approval. Or is that
4 not as critical in your mind?

5 MR. SLOSS: We could certainly do that.
6 And I had thought about that, that we could do
7 that in the next month or so, is to develop a more
8 efficient procurement process if you will.

9 The argument to date has been all state
10 procurement process or no state procurement
11 process. My personal view is that there, you
12 know, as long as these are public goods funds and
13 this, again for the sake of argument, the mere
14 nomenclature of public goods, it gives me a little
15 bother to say we're not going to have any
16 procurement process that evaluates the effective
17 use of these funds.

18 So, I mean from my perspective we will
19 need some kind of a process, and I think we can do
20 just what you said.

21 MR. MESSENGER: Thank you, that's all.

22 MR. SLOSS: And I think in the PIER
23 program there was some renewables program, there
24 was some work done in SB-90.

25 MR. ABELSON: I think it's fair to say

1 that we have extensive experience, both the good
2 and the bad, of things that have been done to make
3 PIER work better, some which has worked, and
4 things that have been a problem in PIER, which
5 need to be addressed further.

6 But I think we have a pretty good
7 practical handle through PIER, and to a lesser
8 degree, through the -- program of what both the
9 benefits and the limitations are of the current
10 process.

11 MR. NELSON: Will Nelson. In terms of
12 program management currently there are 14 program
13 elements defined through the PUC, oversight
14 programs. So we could use that as one reference.

15 And let's say there were three or four
16 or five other kind of front-runners that emerged,
17 you look back. In terms of laying out a blueprint
18 and a road map to who's going to do what,
19 presuming again 2002 would be the -- early 2002
20 would be the period that the changes start
21 occurring, what's your thinking about -- and I
22 know you can't control the legislative process,
23 but in terms of your planning process, when would
24 the agency be ready to unveil the general
25 blueprint, the general direction of which programs

1 go where?

2 For instance, which programs might stay
3 with UDCs for a year or two years. Which programs
4 are going to be brought under state procurement.
5 Which ones are going to be refashioned and put out
6 for bid. Just a timeframe date.

7 MR. SLOSS: Well, this is committing
8 other people in the organization, but what you
9 just raised is the issue of -- this again focuses
10 on a post transition type of administrative
11 structure, and we still have a lot of detail in
12 the transition period. And I think those kinds of
13 questions need to be dealt with before the
14 transition period gets too far along.

15 I think before we actually have a solid
16 legislative package, for example, that would go
17 forward to the Legislature, we would have to be
18 able to answer all those questions.

19 We'd have to be able to answer basically
20 what we're going to do with the programs in
21 existence until the transition is over with. And
22 who they go with and that sort of thing, wouldn't
23 we?

24 MR. NELSON: Let me focus a little bit
25 more. It's project management and staging. I

1 think you can make -- I think it's possible to
2 make some estimate of if some transfers were going
3 to take place in early 2002, some portion of the
4 blueprint has to be unveiled by second quarter,
5 third quarter of 2000. Can you be of any help in
6 that respect?

7 MR. SLOSS: It would have to be late in
8 2000. I actually have Marcel down first and --
9 okay, I'm sorry, you have the microphone, go
10 ahead.

11 MR. McNULTY: Yeah, when you have the
12 microphone you can start talking.

13 MR. SLOSS: I got 'cha. I actually
14 wrote your name down.

15 (Laughter.)

16 MR. McNULTY: That's my theory. It's
17 not an economic theory, it's --

18 (Laughter.)

19 MR. McNULTY: My name's Mark McNulty
20 representing San Diego Gas and Electric. And my
21 question's fairly quick and if you don't have an
22 answer to it, that's fine.

23 In table 1 there are five areas. I was
24 wondering what your percentage of the budget you
25 envision, the staff envisions going to each of

1 those areas?

2 Okay, let me ask the other question and
3 then you can answer them whenever you feel like
4 it, in the next month or so.

5 I want to follow up on what Mike asked,
6 was since you don't have an estimate of how many
7 state employees you envision working on this, do
8 you plan on having an estimate when your final
9 report's due?

10 MR. SLOSS: That's very problematic if
11 we would have a precise estimate by the time. The
12 draft goes out in about two and a half weeks or
13 so. And based upon where we are now, I doubt that
14 we'll have a precise estimate of staff resources
15 required.

16 MR. SUGAR: Yeah, it won't be precise.
17 We'll have a general estimate. The legislation
18 calls for us to estimate the resources required
19 for the transition. And we will have an estimate
20 of the resources required there.

21 We will have an estimate of the
22 resources required for the recommended option, the
23 administrative option, but the resource estimate
24 that we would be starting at the beginning of 2002
25 is probably going to be up for review before the

1 2001, 2002 budget year.

2 I mean as we get a better idea of the
3 way things are working, so that you know, we'll
4 have one more shot at getting as close as we can.

5 MR. SLOSS: In answer to your first
6 question I can only give you my impression, my
7 opinion about proportions. That for number five,
8 for example, would be a very small amount of money
9 out of the total. That most of the funds will be
10 going in at two and three would obviously receive
11 the bulk of the funds.

12 Program and market evaluation, I
13 believe, don't have a good sense of what that
14 might be, but that would probably initially be a
15 fair amount of money. But if we're talking
16 whatever Mike had up there, 200 and some odd
17 million dollars, it would be a real small --

18 MR. MESSENGER: Five or 10 percent I
19 would say.

20 MR. SLOSS: Five percent.

21 MR. MESSENGER: Right.

22 MR. SLOSS: Max, is what I would say.

23 (Laughter.)

24 MR. HAWIGER: Marcel Hawiger on behalf
25 of TURN.

1 Just a clarification on the independent
2 review panel. I'm wondering where -- I just
3 picked up today, I don't know if it was available
4 before, the paper by Sy Goldstone regarding
5 comments on the October -- from the previous
6 workshop. And as part of this specific
7 recommendation section it seems to indicate under
8 point number 2, call for independent evaluation by
9 the Commission.

10 And I'm not sure if that's as part of
11 the independent review or if that's part of
12 program and market evaluation.

13 MR. SLOSS: Dr. Goldstone would have to
14 speak to that. From our standpoint the program
15 evaluation, or this independent evaluation is done
16 by an independent panel. And we have the issue of
17 whether stakeholders are on that panel or not.

18 But that would be an independent panel
19 that would make a independent submittal to the
20 Legislature on how well the governance was going,
21 and how well the programs were going.

22 And that is separate from this, although
23 they obviously use the same information.

24 MR. HAWIGER: And that would be based on
25 a biennial, some type of biannual --

1 MR. SLOSS: That's --

2 MR. HAWIGER: Okay.

3 MR. SLOSS: I see this group meeting
4 once or twice a year, two times maximum, to get,
5 you know, to get input and to tell the staff what
6 more they need, or whatever.

7 MR. HAWIGER: So would Mr. Goldstone
8 have any --

9 MR. GOLDSTONE: Yeah, I think I don't
10 see any inconsistency. You're talking about --

11 MR. HAWIGER: On page 4, item 2, it says
12 strengthen the California Energy Commission's
13 ability to articulate before the fact guidelines
14 and after the fact evaluation. This would be
15 accomplished partly by assigning responsibility
16 for independent evaluation.

17 MR. GOLDSTONE: Yeah. I think, yeah,
18 this proposal would be to have the evaluation
19 that's in that box over there on Mike's sides
20 assigned to the Energy Commission.

21 And also have the Commission articulate
22 some much more detailed guidelines, especially for
23 market transformation programs. Those two would
24 go hand-in-hand.

25 Does that answer your question?

1 MR. HAWIGER: Okay, so it's somewhat
2 different from this box, but -- okay. That's a
3 different --

4 MR. GOLDSTONE: Well, I don't know if
5 it's different --

6 COMMISSIONER LAURIE: Wait, wait, wait,
7 folks. Wait. Time out, please.

8 Sy, -- Mr. --

9 MR. GOLDSTONE: Yeah, box number 4 I'm
10 talking about.

11 COMMISSIONER LAURIE: Sy, will you make
12 it clear, please, that your proposal or your
13 independent comments are not part of staff's
14 proposal. Is that a correct statement, or is that
15 not a correct statement?

16 MR. GOLDSTONE: I don't think it's part
17 of the staff proposal that Mike's referring to,
18 right. It came out of a different team. We're
19 divided into three, four teams. But it's not an
20 official -- so I would say it was developed a
21 little bit independently, --

22 COMMISSIONER LAURIE: Well, wait a
23 minute.

24 MR. GOLDSTONE: -- so there's a
25 possibility --

1 COMMISSIONER LAURIE: We have a
2 little --

3 MR. GOLDSTONE: Yeah.

4 COMMISSIONER LAURIE: -- in-house issue
5 here.

6 MR. GOLDSTONE: Yeah.

7 (Laughter.)

8 MR. HAWIGER: That's fine. So, let's go
9 on to the next question.

10 MR. GOLDSTONE: I was talking about box
11 4, not box 5, okay?

12 MR. HAWIGER: Okay.

13 MR. SLOSS: Okay, yeah, let's do that.

14 MR. VINE: Ed Vine, University of
15 California. It looks like your independent review
16 panel is very important for this whole model in
17 terms of sort of accountability for the Energy
18 Commission.

19 Why do you -- if it's to be independent
20 why are the members going to be -- why does the
21 Energy Commission have a role in appointing them?

22 MR. SLOSS: It was our view that there
23 would be some method or some process of dividing
24 up those appointments and selections between the
25 Legislature and the California Energy Commission.

1 We didn't give any consideration to things like
2 weighting, whether the Energy Commission would
3 have two people on there and the Legislature would
4 have nine, or whatever.

5 MR. VINE: Why should it have any role?
6 Why not let the Legislature --

7 MR. SLOSS: I presume they could have
8 them all. David, go ahead.

9 MR. ABELSON: The only other thing I
10 could add to that is to the extent we had a model
11 in mind in talking about it, when SB-90 was passed
12 to implement PIER, and the renewables program, the
13 Legislature very much wanted independent feedback
14 at the end of the program. And they directed that
15 such be created, that an independent panel be
16 created.

17 But they did ask the Energy Commission,
18 even though we are nominally administering,
19 actually managing the PIER program in its entirety
20 virtually, to actually pick the panel.

21 For those of you that are not aware, the
22 panel is in existence. It was a combination of
23 the California Council on Science and Technology
24 in cooperation with Rand, finding people who have
25 expertise with regard to public interest research

1 programs but are not active participants in any
2 way in the PIER program that are sitting on it.

3 So, I think it's possible conceptually
4 to create an independent panel, have a governing
5 entity like the Energy Commission nominally
6 selected without creating a conflict. But I
7 certainly understand the point you're raising.

8 MR. SLOSS: Excellent question. Marty
9 Katz.

10 MR. KATZ: Marty Katz with SMUD.

11 Mike, how do you see the money flowing
12 here? Is this going to be similar in your mind to
13 help PIER operating? Who --

14 MR. SLOSS: Would you start that over
15 again?

16 MR. KATZ: I'm sorry. How do you see
17 the money flowing here? Do you see it similar as
18 how PIER may be operating, which I'm not familiar
19 with, in terms of who gets the money, how the
20 contractors are paid, how the program managers are
21 paid and so forth?

22 I think you're going to have a lot more
23 financial transactions here than you have in the
24 PIER program.

25 MR. SLOSS: Well, that may be. I'm not

1 sure exactly how this works. If, in fact, the
2 Commission is the governance body, somehow we have
3 to have the authority to actually allocate funds
4 to contractors.

5 And I don't really know precisely how
6 that would take place. Mike looked at it a little
7 bit --

8 MR. MESSENGER: Yeah, I looked at it a
9 little bit. I think ideally in the legislation we
10 would say at whatever level of the funding is
11 adopted the CEC would have either the annual or
12 biennial process to set budgets for each of the
13 boxes essentially. And say, okay, you know,
14 independent review, you get \$10 million a year;
15 program market evaluation you get 5, whatever the
16 numbers are. And that that would be their
17 governing allocation until two years later.

18 But the CEC, itself, wouldn't be
19 responsible for writing contracts essentially, we
20 just propose an allocation of the legislative
21 total to each of these five or six boxes as a
22 result of either a planning process they'd had
23 previous to that, or at the start they might just
24 start with, you know, the existing level of
25 allocation, for example, that the utilities

1 currently have between residential and
2 nonresidential and new constructions programs.
3 And just use that as the proportions to set the
4 program budgets.

5 MR. KATZ: Yeah, not such much, you
6 know, -- not so much concern with how the budgets
7 are set up, but this came up, you know, when they
8 were doing the RFP at the CB, and you know, it's
9 pretty complicated. I'm talking more about
10 payments of, you know, various folks, and timely
11 payments of you know, people out in the field and
12 the implementers.

13 MR. SLOSS: We have Manuel and then
14 Renee. And then Peter.

15 MR. ALVAREZ: Manuel Alvarez, Southern
16 California Edison. I want to go back to a comment
17 that you made about nonprofit option --

18 MR. SLOSS: Right.

19 MR. ALVAREZ: You somewhat dismissed it.
20 And I guess what I heard you say is your concern
21 with that was the up-front effort of governance
22 and organization of the nonprofit. And I guess my
23 question goes, you don't think that within the
24 next two years those kinds of issues could be
25 resolved?

1 MR. SLOSS: No, I think they could be
2 resolved. What our group thought was is that the
3 cost and time and effort and resources required to
4 go through that process might not equal the
5 benefits that we might achieve at the end,
6 compared to what you could get done if we just
7 went ahead with the existing organizations.

8 That was all that, you know, that
9 analysis amounted to.

10 And if I gave the impression we
11 dismissed the nonprofit, we didn't dismiss the
12 nonprofit. We've gone over this option many times
13 to try to figure out what it really means. We
14 have a lot more to learn actually about if, in
15 fact, we have to create a new one, what that
16 means.

17 All nonprofits have to have a board.
18 Who appoints the board? I mean that would all
19 have to be done as part of some legislative
20 process I presume. The selection of executive
21 officers, the selection of financial officers.

22 All those types of functions that have
23 to take place -- and the selection of staff and
24 the training of staff, if that's necessary. And I
25 can't answer all those questions explicitly.

1 MR. ALVAREZ: I guess, you know, I see
2 this report going to the Legislature in January,
3 early January. And then I guess some resolution
4 coming out of there. And then you still have the
5 rest of 2000 and 2001 to discuss those kinds of
6 issues before you would get into another round of
7 operation.

8 MR. SLOSS: Renee.

9 MS. GUILD: Are you advocating that it's
10 a preferred option, or that you want to see it
11 further developed?

12 MR. ALVAREZ: I guess when I heard Mike
13 talk about the nonprofit, I felt that it was
14 dismissed in the staff's recommendation, and he's
15 telling me he didn't do that.

16 MR. SLOSS: We came forward with today,
17 we had on October 1st staff workshop. We laid out
18 the three, you know, A, B, C, and B was the
19 nonprofit option. A was the PIER option, B was
20 nonprofit, C was sort of this option.

21 Today for the sake of time and
22 discussion we thought we would just put forward an
23 option. But I certainly don't want to give the
24 impression we dismissed the nonprofit.

25 I think Renee was next.

1 MS. GUILD: Renee Guild with EPRI. My
2 question goes to your table 1, and the program
3 management accountability. Two-part question.
4 One is you've listed CEC as accountable for
5 program management.

6 First of all, who at the CEC? Would
7 that be Commissioners, or would that be staff?

8 And secondly, what accountabilities do
9 you then foresee for the three to eight for profit
10 and nonprofit organizations in program management?
11 And what specific accountabilities would you
12 attribute to them versus either the Commissioners
13 or staff?

14 MR. SLOSS: Well, under -- if I
15 understood your question, you were just looking at
16 the second line or category one or category two,
17 or both?

18 MS. GUILD: The second line in program
19 management where on your table you've listed out
20 the CEC being accountable for program management.

21 MR. SLOSS: Where I've included CEC
22 staff?

23 MS. GUILD: No. The question is is it
24 staff or is it Commissioners.

25 MR. SLOSS: Oh, I missed that, okay.

1 But this, obviously accountability starts with the
2 Commission. And then whatever they delegate
3 further to the staff is how that happens.

4 I see this as accountable to the
5 Commission is what that means.

6 MS. GUILD: So then what role would the
7 program administrator -- the nonprofit and for-
8 profit organizations have accountability for?

9 MR. SLOSS: They would be responsible
10 for the selection of the implementers, for
11 determining the selection -- helping to determine,
12 anyway, the selection process, carrying out the
13 selection process, and overseeing the work of the
14 program implementers.

15 COMMISSIONER LAURIE: But they would be
16 accountable to the governing authority.

17 MR. SLOSS: Right, the governing
18 authority.

19 MS. GUILD: And I guess it goes to who
20 is ultimately accountable if someone chooses
21 wrong.

22 COMMISSIONER LAURIE: It would be the
23 governing authority. When the Legislature makes
24 inquiry, the person or persons who will have the
25 honor and privilege of making that appearance is

1 the one that's going to be accountable.

2 MR. SLOSS: Right.

3 COMMISSIONER LAURIE: And I would think
4 that's going to be the representative of the
5 governing authority.

6 MR. SLOSS: Peter.

7 MR. MILLER: Yeah, I'm trying to make
8 this a question, phrase it as a question, so I'm
9 not good at jeopardy, so I'll raise my voice at
10 the end so it's more of a --

11 (Laughter.)

12 MR. MILLER: -- concern, but I look at
13 the flow chart, the org chart that you had up
14 before, and then I look at the words and I see
15 something different. And so it's sort of a
16 confusion because it seems to me there's a layer
17 between the oversight, the governance entity and
18 the program managers that's missing. And that's
19 the contract management layer. Drafting the RFPs
20 to hire those program managers, and managing those
21 contracts.

22 Is that missing?

23 MR. SLOSS: Well, the contract managers
24 would be within here somewhere, wouldn't they?

25 MR. MILLER: No, those are the

1 contractors. They're under contract to the --

2 MR. SLOSS: Commission -- or to the
3 governance authority.

4 MR. MILLER: So someone at the
5 Commission has got to draft those RFPs.

6 MR. SLOSS: Right.

7 MR. MILLER: There's an extra box in
8 there, right?

9 MR. SLOSS: Well, it's up in the CEC.

10 MR. MESSENGER: He sees it as part of
11 the governance box. The CEC contract managers,
12 let's say there was three contracts there with
13 each of those three program managers, they'd be
14 part of that governance box.

15 MR. ABELSON: In fact, when we first
16 created these words, if you go back to the text, I
17 think there's -- I think the word that's used for
18 number one is governance and oversight.

19 There are multiple functions. I mean
20 there's broad policy setting, and as defined here
21 in the principal duties, hiring the administrator
22 under this proposal is certainly one of those
23 governance and oversight functions.

24 MR. MILLER: I guess the question, the
25 concern goes to that function, because it -- I

1 mean just note in your paper that that's hard to
2 draw bright lines, but that's squarely on top of
3 that line? And it blurs the line particularly
4 when you look at the additional appearances of CEC
5 Staff on this table, which is both in the area of
6 contract management, but also program management.

7 So you have CEC Staff moving through
8 program management, being responsible and
9 accountable to the CEC, itself. CEC Staff doing
10 market program and market evaluation, responsible,
11 accountable to the CEC. And appointing the
12 independent review panel.

13 So it just, I mean I see, I guess, an
14 infiltration or a blurring of CEC Staff throughout
15 the org chart. And that's --

16 MR. SLOSS: You didn't raise your voice,
17 though.

18 (Laughter.)

19 MR. MILLER: And that's what I'm
20 wondering about?

21 (Laughter.)

22 MR. MILLER: How's that?

23 MR. SLOSS: In all of our deliberations
24 we thought that there were possibilities for the
25 CEC Staff to be involved in program management,

1 for example. We might have a small program of
2 some kind of emerging technology, or some kind of
3 R&D type of activity that just wasn't the kind of
4 thing that we were ready or thought appropriate to
5 put out to bid or to contract. We might have the
6 CEC Staff involved in that.

7 In terms of program management or
8 program market evaluation, maybe the same thing,
9 that there would be some activities that wouldn't
10 necessarily get contracted out, and the CEC Staff
11 would conduct those activities. Those would be
12 minimal in the context of the overall program.

13 What I guess -- see I look at this box
14 in terms of -- I mean that's the CEC. So, we
15 would be issuing, if under this scheme, we would
16 be issuing an RFP to select these four boxes or
17 whatever it was we decide we're administrators.

18 And somewhere up in the CEC would be a
19 staff or two that ultimately would have to
20 administer those contracts.

21 But I don't see that as another level.
22 That's part of -- I don't see it as a level.
23 That's part of that governance function.

24 Chuck.

25 MR. GOLDMAN: I had a question about

1 that staff or two that's going to administer the
2 contract. That seems to me -- in your third
3 bullet you say approve program budgets submitted
4 by function 2, which is a program manager.

5 Well, it's one thing if the governance
6 agency approves the budget, that's what the PUC
7 does today. But at least with the CBE envisioned
8 and the Commission envisioned its independent
9 administration, it envisioned contract managers
10 who would be dealing on a day-to-day basis with
11 the program managers in your model, and who would
12 be paying, you know, who pays the invoices?
13 You're talking about tens of millions of dollars
14 here that are going to come to you over the course
15 of a year, and going to ask to be paid for.

16 So it seems to me -- so the question I
17 have really is, sort of a follow-on to Peter's,
18 which is it's really governance and oversight.
19 And I really think that you need to think through
20 oversight in a very much more specific and
21 detailed way.

22 And then the second point really is
23 think about what's happened in other states.
24 What's happened in other states is they've tried
25 to clarify the roles of the state energy office.

1 In each case where you try to put yourself in too
2 many boxes, somebody chops your head off.

3 That's what happened in Wisconsin.

4 That's what's happened in Vermont. And it may
5 happen here. And think about how your roles
6 affect your mission.

7 MR. ABELSON: Well, just a comment from
8 the standpoint of the point you're making to two
9 things. Number one, we're concerned with not
10 creating an accessibly complex set of layering.
11 Where you can avoid the middleman, for lack of a
12 better way to put it, efficiency dictates you
13 should try to do that.

14 Number two, this agency is currently
15 administering close to \$200 million a year between
16 the renewables program and the PIER program. Now,
17 there are problems, I'm not going to sit here and
18 no one who's familiar with PIER would sit here and
19 say that there aren't difficulties. The
20 renewables program is going smoother in other
21 ways.

22 But the question of our ability to
23 handle, as an agency, basic invoicing issues with
24 regard to hundreds of millions of dollars is
25 simply not an issue that we're unable to deal

1 with. Whether there's a better way to deal with
2 it is another question.

3 MR. MILLER: But it's not -- ability,
4 but for instance in the PIER program there's a
5 staff of 50 people for managing \$60 million in R&D
6 contracts, doing contract management.

7 And so, and this program is four times
8 as large. So, are we -- I mean my question is are
9 you talking about 200 people there?

10 MR. ABELSON: No, this is --

11 MR. MILLER: And if so, shouldn't that
12 be a box on the chart?

13 MR. SLOSS: No.

14 MR. ABELSON: The answer is no.

15 MR. MILLER: And if not, why not?

16 MR. SLOSS: The answer is --

17 MR. SUGAR: Two hundred people would be
18 a big box on the chart, and we don't have one.

19 MR. SLOSS: But the answer is absolutely
20 no. And the other thing is we already have
21 programs --

22 MR. MILLER: Well, then why not?

23 MR. SLOSS: I --

24 MR. MILLER: Why is it not 200 people?
25 That's what I don't understand.

1 MR. SLOSS: Well, first of all, I didn't
2 look at governance as including things like
3 approving every invoice. In my opinion I don't
4 see why when you make this contract that these
5 guys can't be approving these invoices. I don't
6 understand why you can't do it. We already do
7 that in some of our own public programs right now
8 where we have general contractors who the hire
9 subcontractors and go get the work done. They
10 approve the invoices.

11 MR. MILLER: That's true also for the
12 PIER program. And you still have 50 people.

13 MR. SLOSS: Well, but see from my
14 standpoint that's one of the reasons why, while
15 we're on the subject of this, that's one of the
16 reasons why this body should be involved in some
17 process of approving program budgets.

18 You approve an overall budget -- go
19 ahead.

20 MR. MILLER: I just -- go ahead, I
21 didn't mean to interrupt.

22 MR. SLOSS: No, that's all right.

23 MR. MILLER: I apologize.

24 MR. SLOSS: I just, that body, once the
25 governance body approves an overall program

1 budget, in my opinion I don't see why that can't
2 be incorporated into the bid process where the
3 administrator then picks up the responsibility for
4 the expenditure of funds.

5 You have a program, a market evaluation
6 independent review function, and maybe a
7 department of finance fiscal audit or something
8 like that, that makes sure that over time those
9 people are doing the jobs that they're hired to
10 do.

11 And we're not approving every invoice.

12 MS. ten HOPE: Peter, I think this is
13 consciously a really different model than PIER.
14 PIER put out a model where the Energy Commission
15 was selecting individual projects.

16 And I think that staff has put forward a
17 proposal that specifically says we're not going to
18 do that kind of model. We're going to do a model
19 where you have like master administrators that
20 then go out to the project level. So --

21 MR. MILLER: I guess the problem I have
22 is that that's clearly got something in mind, but
23 it's not on paper. And so it's hard to
24 understand. Specifically, I think you have to be
25 very clear about how you see that working and why

1 it's going to work and why it would be different.

2 MS. ten HOPE: We heard resources, we
3 heard invoicing, other specifics that should be --

4 MR. MILLER: How would that process
5 work, exactly what would the -- how would you have
6 a program manager responsible for an average of
7 \$50 million in programs, at the few set of
8 programs and multiple subcontractors and
9 implementers. How would you manage that? Would
10 you just give them free rein? Would they submit
11 one invoice at the end of the year? What kind of
12 performance it says what they operate under.

13 How would, you know, do they just say,
14 give me \$5 million a month? I mean I have no idea
15 how you can manage that without, you know,
16 substantial staff.

17 MR. GOLDMAN: These are all issues of
18 the PUC that we confronted two years ago. And we
19 got through part of the process, but we were
20 looking at, the PUC trying to with four staff,
21 five contractors. So, what you're suggesting, you
22 can't hire individual project managers, there has
23 to be a master contract. But it had to be a very
24 specific role. We had to be able to think through
25 where the flow of dollars was going to be.

1 Because the administrator has the -- the project
2 manager has got all the money, or just the
3 administrative portion of the money?

4 You've got to think through all those
5 issues about where the dollars are passing
6 through, who signs off on the checks, what the
7 role of the contract manager, that staff person,
8 those four or five people, those 200 people, or
9 50, whatever number you think you can sell, are
10 going to do.

11 MR. SLOSS: It's either John Wilson or
12 Chris.

13 MR. MESSENGER: Or the guy with the
14 mike.

15 COMMISSIONER LAURIE: Chris, why don't
16 you ask your question and then we'll go to John
17 for last. It will be the last question. At 2:45
18 we're going to cut off this discussion and go to -
19 - we want to provide opportunities for your
20 proposals.

21 MR. CHOUTEAU: Chris Chouteau, PG&E. It
22 just seems to me that there's a missing box here.
23 And when we met last time we talked about the
24 bright lines between some of these, and for me
25 there's a very clear bright line between

1 governance and some of these other functions.

2 And really there's a missing box here,
3 which is I don't know what to call it. You call
4 it administration, but you've combined it with
5 governance, and you're calling it oversight, I
6 think.

7 But if you really talk about letting
8 massive contracts, even with administrators who
9 have broad responsibilities, that's an
10 administrative function. And it's not a small
11 one.

12 And it creates, if you don't show it on
13 this sheet, then it creates confusion about where
14 that's happening. And if you do show it, I think
15 it will be clear that there is another step in
16 this process, which we don't have right now.
17 Which you would be inserting, which is we have
18 governance and we have people who runs programs.
19 But we don't have an intermediate step.

20 So I think you need to show that if
21 that's what you're proposing. Or be very explicit
22 that you're combining that as governance, but I
23 personally don't think it fits under the title of
24 governance.

25 MR. SLOSS: Okay.

1 MR. WILSON: I'm also hung up on the
2 phrase expedited state procurement, having spent
3 much of my time for the last two years in the PIER
4 program and it does seem to me to be a bit of an
5 oxymoron.

6 And despite the fact that we had SB-90,
7 we got some help in the PIER program with that.
8 I'm still really concerned that the staff proposal
9 puts a lot of confidence in being able to do that.
10 And I, again, based on my experience, don't have
11 that belief.

12 I wonder if the staff has talked to the
13 CB members or the CPUC Staff about the RFP process
14 that they worked on a year ago, and talked in some
15 detail about the problems that they faced and the
16 kinds of solutions they were trying to come up
17 with. Something that will give us more specific
18 reason for believing that we could have an
19 expedited state procurement.

20 MR. SLOSS: I have not.

21 MR. SUGAR: CB made a presentation to
22 the Committee. I haven't spoken, you know,
23 individually to Chuck or others.

24 MR. WILSON: Well, and the message we
25 got in that meeting was state procurement's tough.

1 And the RFP process didn't work because of a lot
2 of those detail problems.

3 MR. SUGAR: The message I got speaking
4 with -- there are problems. The CPUC is not a
5 contract-driven organization. The CPUC is a
6 regulatory organization.

7 We have done quite a bit of contracting.
8 There are areas in which contracting can be
9 improved. One of the issues that has come up, I
10 think, in our discussion with utilities, and one
11 of the points that Peter made, he raised the issue
12 of incentives.

13 And I think that reflects an approach
14 which is more closely related to a regulatory
15 function than to a contract type function. I mean
16 normally contracts, while it would be possible for
17 us to structure contracts with incentives,
18 normally the incentive in the contract is to get
19 paid. And there are requirements or expectations
20 of what the contractor will do. And if the
21 contractor does those things, he or she gets paid.
22 What they are paid includes what would now be
23 considered incentives for shareholders because
24 when the contract is bid, the bidder includes the
25 profit that they need to be in business.

1 The state has used a variety of
2 contractual methods. I've been involved in other
3 agencies in contracting methods which haven't been
4 used here, but have been used for very large,
5 extremely complicated health care contracting
6 purposes.

7 So, the contracts here we have used
8 contracts extensively in our division that rely on
9 work orders, where effectively we have a master
10 contract, and then as work needs to be done, there
11 are agreements with the contractor as to how that
12 would be done.

13 With complex projects that require
14 imagination it's possible to use two-step
15 contracting procedures where effectively you
16 prequalify those who would participate in the
17 contracting. And then work with the contractors
18 to come up with approaches that then can be
19 compared and scored. I think, PIER, in fact, with
20 its -- I can never get Phil Meisner's program's
21 name right, but it's kind of a negotiated
22 contracting system going. It follows along those
23 lines.

24 I've worked on the, in fact led the
25 effort to get the sole source regulations for the

1 PIER program through and implemented. There are
2 issues anytime we try to get away from the
3 standard contracting system.

4 And these issues can be resolved. The
5 goal of the process being that public funds are
6 protected to insure that. And there are those
7 that may argue these aren't public funds, but the
8 goal of the process is to insure that the people
9 who are paying the money get good value and the
10 expected products for what they are paying.

11 And it is possible to structure
12 contracting processes so that one is focusing more
13 on outcomes than on individual, you know,
14 procedures, where, you know, someone in the Energy
15 Commission has to look at every single invoice.

16 Now, some of that has to be written into
17 legislation to provide some flexibility, but that
18 can be done and still protect the public interest
19 and insure that it's possible to operate a program
20 to everyone's benefit.

21 COMMISSIONER LAURIE: Thank you, John.
22 I'm going to put that discussion off now. At this
23 time what the Committee's interested in hearing
24 from you is your own preferences, individually, in
25 your capacity as a representative of an entity or

1 an agency.

2 So there will be a draft report coming
3 out in a matter of weeks. This is your
4 opportunity to provide input into the Committee
5 for that purpose.

6 We'd like to use the next hour to
7 accomplish that.

8 We have a couple blue cards. I would
9 ask you to utilize the blue card system. Don't
10 worry about it if you don't. But I currently have
11 one blue card, and if that's all the input we
12 have, we're going to be very disappointed.

13 Mr. Goldberg.

14 MR. GOLDBERG: Lenny Goldberg. I've
15 been with the Davis Energy Task Force in which we
16 were looking at opportunities for energy
17 efficiency and adapted to restructuring in the
18 City of Davis.

19 I also lobby for TURN, and Marcel
20 Hawiger here will make the main comments for TURN
21 today, but I will make a couple of comments just
22 on the legislative process, since I spend a lot of
23 time in the Legislature.

24 Which is that I think that the -- in
25 these proposals the Legislature will be jealous of

1 their prerogatives, as always. And then that's
2 balanced with the administration, but it's
3 certainly regular reporting to the utilities
4 committees and presumably the resources committee
5 and the budget process, \$240 million is a
6 substantial amount of money.

7 I would also say that we're going to
8 need to have, coming out of this process, some
9 level of consensus. I think there are a lot of
10 people across the street who see, despite the
11 comments earlier, that \$240 million required to be
12 paid in rates is, as a mandatory requirement, has
13 been called at least by some, a tax.

14 Certainly in the public purpose programs
15 that we were trying to reestablish in the
16 Legislature for gas this year, it required a two-
17 thirds vote of the Legislature to enact the public
18 purpose programs, which is somewhat at odds in the
19 past with some majority vote requirements that
20 existed with regard to whether this is a tax or a
21 fee.

22 But as a tax, it basically says there's
23 going to have to extend these programs
24 significantly, through 2006 if that's the chosen
25 year. There will have to be a substantial level

1 of consensus among participants as to what its
2 structure is going to look like, how those
3 benefits are going to be apportioned, and what the
4 nature of the payments are.

5 I want to comment, I missed this
6 morning, but make one comment as the Davis Energy
7 Task Force we were looking at in our city how to
8 adapt to restructuring.

9 We had a small subcommittee on energy
10 efficiency, which included staff from the Energy
11 Commission, a person who lives in the City of
12 Davis, Bill Knox. Dick Born of the Davis Energy
13 Group, who is very knowledgeable in implementation
14 of energy efficiency, and myself who is probably
15 more knowledgeable on the political side than the
16 technical side.

17 One of the things we saw was market
18 failure free in the residential and small business
19 sector. I don't know, did you discuss some of
20 that this morning, and that a focus on peak load
21 reduction gives you a much greater bang for the
22 buck when you're looking at relatively high cost
23 peak electricity.

24 We were concerned as we looked at a
25 number of years to say our load profiles in the

1 valley, anywhere in the valley, but in Davis are
2 -- is much less -- is much worse with regard to
3 peak usage than the way we are currently averaged
4 in.

5 And as electric restructuring plays out,
6 the extent to which we will start to separate out
7 those loads, coastal versus valley, there will be
8 significant disadvantages to peak power costs with
9 regard to the valley.

10 And so that when we look at designing a
11 residential program, it's one that looks at peak
12 load reductions as well as baseload and other
13 energy efficiency reductions.

14 And if you take the dollar value of that
15 at 15 cents a kilowatt hour versus 2.5 cents a
16 kilowatt hour, the dollar value is going to be
17 substantially more.

18 So then we looked towards
19 implementation. I think the piece of this chart,
20 since Marcel is going to talk for TURN on the
21 broader perspective, the piece of this chart that
22 we were concerned about is how do you get the
23 program down to residential and small business
24 ratepayers.

25 And we sort of sided with, I don't know

1 if you've heard from Rita Norton from the City of
2 San Jose, but sort of Chula Vista and a sort of
3 budding group of municipalities, which I think
4 would also include some municipal utility
5 districts, and counties who are concerned about
6 public involvement at the local level.

7 That one of the issues about contracting
8 and procurement may be that we, in Davis, paying
9 300,000 relatively small amount in ratepayer
10 dollars to this energy efficiency program each
11 year, are seeing nothing back directly.

12 And that some portion of that, were it
13 to go to the City of Davis to do a program, too,
14 in our case probably change out a lot of old air
15 conditioners, which is both peak load reduction
16 and substantial energy efficiency.

17 Or also looking at the multifamily
18 housing sector, in which there is significant
19 market failure, where the landlord doesn't have an
20 incentive for energy efficiency because the tenant
21 has the meter. The tenant, obviously, is not
22 going to invest in energy efficiency.

23 An old problem, but one that we feel has
24 been inadequately addressed in the energy
25 efficiency programs.

1 So with regard to administration, what,
2 you know, I think we are speaking here to, or what
3 I would speak to is the involvement of local
4 public agencies as a major part of the delivery
5 system for residential and small business.

6 That doesn't mean that the cities are
7 going to hire their energy efficiency staff to go
8 out and implement the programs. It may be
9 contracts with ESCOs, it may be arrangements with
10 the utilities. We certainly see a lot of
11 financing opportunities here. Those may be
12 statewide financing opportunities in terms of
13 being able to finance the change-out of an air
14 conditioner at a reasonable rate, for example.

15 But I want to speak for some clarity
16 about local government involvement. Cities,
17 counties, special districts who can get, in
18 conjunction with getting to the residential and
19 small business sector.

20 And when we talk about a consensus
21 program giving people some connection between
22 paying these mills on their rates and getting back
23 some benefits for it. Because I think to extend
24 this program we're really going to need some
25 public visibility with regard to how the program

1 benefits residential and small business customers.

2 Thank you.

3 COMMISSIONER LAURIE: Thank you, Mr.

4 Goldberg.

5 Again, I should note for the record that

6 NRDC and PG&E have submitted written comments.

7 Written comments would be appreciated again by the

8 end of this week if any of you have them.

9 Mr. Miller.

10 MR. MILLER: I have some written

11 comments, I'll put them on the website tomorrow.

12 But if anybody would like a copy now there's some

13 on the front desk.

14 Peter Miller with the National Resources

15 Defense Council. I take to heart Lenny's concern

16 and pointing out the need for consensus. And I

17 think one of my principal goals in submitting the

18 following, the -- going to describe, was an

19 attempt to try and reach some consensus, because

20 we will need that kind of agreement in order to

21 move forward with the funding extension and what

22 we need to do to keep these programs running.

23 The administrative option that I'm

24 proposing is an attempt to retain the functioning

25 aspects of the current framework, while also

1 making a substantial shift in oversight from the
2 PUC to the CEC.

3 This option also provides an opportunity
4 to test alternative administrative approaches,
5 particularly those that seem to be preferred by
6 the CEC Staff, by transferring responsibility for
7 program management for a single program or a
8 limited set of programs to a private program
9 manager, either a nonprofit or for-profit, or a
10 public entity such as local government, operating
11 under a contract to the CEC.

12 I call it the evolutionary approach
13 because it has the advantage of maintaining a
14 large share of the existing framework, those
15 elements that work, while allowing for continuing
16 evolution of the program in the overall
17 administrative framework.

18 The governance function would be
19 primarily shifted to the Energy Commission from
20 the PUC. The CEC would have responsibility for
21 overall program guidance, determination of policy
22 guidance and program objectives.

23 Program planning would occur at the CEC.
24 It would be a biennial process. Staff has already
25 mentioned, I think, a two-year process make sense.

1 And it would begin with adoption of policy goals
2 and guidelines by the Commission at the Commission
3 level.

4 Program administrators or managers would
5 then file two-year program plans and budget
6 recommendations. Parties would have an
7 opportunity to comment on that, provide input,
8 including CEC Staff. And the Commission would
9 review parties' comments, the plans, receive
10 public input and modify them as needed to
11 formulate off them. Including any performance
12 incentives that were incorporated in the overall
13 administrative framework.

14 There would be an annual performance
15 review that would determine any appropriate
16 performance incentives.

17 The oversight role of the PUC would be
18 limited to incorporating the funding levels and
19 the budget allocations that were determined here
20 at the CEC into rates, and to performing an audit
21 function to insure that the collections in rates
22 and the disbursements to the various accounts were
23 consistent with CEC decisions.

24 Program management would continue to
25 largely reside with utilities. They would be

1 responsible for program planning, design and
2 development, contract management with implementers
3 and related market research measurement and
4 program evaluation for those programs that were
5 under their aegis.

6 The CEC would assume management
7 responsibility for single program or limited set
8 of programs. And the determination of which
9 programs would be based on a set of predetermined
10 set of criteria including, for example, that they
11 were statewide programs, didn't require local
12 field staff. They were consistent, those programs
13 were consistent with the CP -- CEC's expertise and
14 responsibilities.

15 My point here is not to propose specific
16 criteria, but to merely note that those criteria
17 would need to be developed, should be developed.
18 They would result in programs such as the third
19 party initiative programs, a loan program or codes
20 and standards support being transferred to the
21 CEC's responsibility through contract with program
22 manager.

23 Project and limitation would be largely
24 unchanged. It would continue to be out-sourced
25 for the most part to third-party implementers.

1 Measurement assessment evaluation would be divided
2 up among the various parties, so that CEC would be
3 responsible for broad market assessments, and
4 evaluation of market functioning.

5 Market characterizations, utilities and
6 program managers would be responsible for
7 evaluation, direct program evaluation, provide
8 close feedback to their program managers and
9 designers and planners.

10 And there would, of course, be a
11 independent review panel that is responsible for
12 reporting to the Legislature as it is in the PIER
13 program.

14 I think it's important, having served
15 now on both the PIER review panel and the CBEE, I
16 think it's essential that that entity be clearly
17 defined and its role be clearly specified.

18 I think that's something that the staff
19 draft doesn't yet do clearly enough, and needs to
20 be thought through. But I think there is a role
21 for an independent panel.

22 In terms of the fiscal review, the
23 fiscal audit, that would be the responsibility of
24 the PUC, although clearly if the Department of
25 Finance felt that there was a role there, that

1 would be their prerogative.

2 That's the skeleton of the proposal, and
3 I'd be glad to answer any questions.

4 COMMISSIONER LAURIE: Mr. Miller, do you
5 distinguish between an independent review panel
6 and an advisory panel?

7 MR. MILLER: Yes. I think that's an
8 essential part of the clarification of the
9 responsibilities of that body.

10 COMMISSIONER LAURIE: Thank you.
11 Commissioner Pernell, did you have any questions?

12 COMMISSIONER PERNELL: Yeah, I have a
13 couple, I guess. So on the chart that staff put
14 up, we would be under governance, you got us under
15 governance, but yet you have the CPUC setting the
16 budget and doing the auditing, and then you have
17 the utilities doing basically the same thing.

18 So, I'm trying to find where on this
19 chart we fit.

20 MR. MILLER: The CEC would be the
21 responsible for -- principally responsible for
22 governance and oversight.

23 COMMISSIONER PERNELL: But governance
24 also includes --

25 MR. MILLER: I would try and draw a

1 bright line, brightly as possible, above the
2 program managers and below the governance agency.
3 And the CEC would be the entity responsible for
4 governance and oversight.

5 And that would be 99 percent of its job.
6 And it would a Committee level responsibility for
7 approval of program plans, program budgets, and
8 oversight of the program managers.

9 And staff would provide input, along
10 with other parties, into those plans and into
11 program planning and budgeting. But it would be a
12 Commission level responsibility for making the
13 decisions, making the hard decisions of who gets
14 what, and insuring that there's adequate oversight
15 over the program managers and, by extension, the
16 implementers.

17 COMMISSIONER PERNELL: Right, and just a
18 final question is as we go through this we're
19 mindful of the legislation which says that we will
20 basically come up with a -- I think staff did a
21 range of what the budget would be.

22 And yet you're proposal kind of takes
23 that and puts it in the hands of the PUC.

24 MR. MILLER: Let me clarify that,
25 because that's, you know, the PUC would be

1 responsible for merely implementing the CEC's
2 decision for the most part. They would -- they
3 would continue to have authority over rates, and
4 therefore I think that it would be appropriate
5 that they -- and I'm not a PUC attorney -- but I
6 assume that they would have to direct the
7 utilities to adjust the rates as necessary to make
8 sure that the collections were appropriate to
9 costs, various classes.

10 I don't know how big of a role that
11 would be. But there wouldn't be discretion in
12 terms of determination of the overall budget.
13 Their role would be to --

14 COMMISSIONER PERNELL: Okay, I just kind
15 of misunderstood what you were saying.

16 COMMISSIONER LAURIE: Okay, thank you.

17 MR. MESSENGER: Just one question of
18 clarification. As I understand your proposal, the
19 governance body would decide whether or not and
20 how big or how small this CEC program management
21 level might be. They could decide, for example,
22 to make it \$1 million a year one year, and \$10
23 million the next. And then they would sort of
24 review that to see how well that experiment
25 worked, is that part of the intent of your

1 proposal?

2 MR. MILLER: Yes.

3 MR. MESSENGER: They would make a
4 judgment, let's say the first year 90 percent
5 would go to the utility and 10 percent to the CEC
6 Staff, and then they can change that percentage
7 over time depending on experience?

8 MR. MILLER: Yeah.

9 MR. MESSENGER: Okay.

10 MS. ten HOPE: Under the program
11 management role you see the utilities continuing
12 to run the program by service territory? And
13 there wouldn't be competition among that role, so
14 that would be basically staying as it is right
15 now, with whatever pilot program would be run by
16 the Energy Commission, is that right?

17 MR. MILLER: Well, it's generally true,
18 but if you look at the current programs there's a
19 lot of statewide efforts being done
20 collaboratively among the utilities, and I would
21 expect and encourage that process to continue and
22 to expand.

23 So that those programs which it's
24 appropriate to have a statewide program should be
25 done as collaboratively as possible with seamless

1 implementation, seamless administration across the
2 service territory boundaries.

3 MS. ten HOPE: And then right now
4 utilities get performance incentives. Would you
5 see that continuing under a PUC arena, or it would
6 be a contract relationship with the Energy
7 Commission?

8 MR. MILLER: It would be through a
9 regulatory framework. So the CEC would establish
10 the mechanism, would determine in level of
11 incentives that were due, but they wouldn't be --
12 the utility compensation wouldn't go through a
13 contract.

14 There would be no need, and in fact it
15 would be much easier to avoid. And the intent was
16 to avoid that whole development of a contract
17 process. Utilities would continue to be, and are
18 continuing to be regulated entities who collect
19 the funds from rates and the appropriate --

20 MS. ten HOPE: But that would have to
21 happen in a PUC forum?

22 MR. MILLER: No, no, the CEC would
23 determine the level of incentives, the PUC would
24 merely insure that that level was direct to the
25 shareholders versus the amount that would go into

1 program administration.

2 But the determination that's arrived at
3 here was implemented through their collections and
4 disbursements.

5 MS. ten HOPE: It would take some
6 coordination, I think, --

7 MR. MILLER: It would definitely take
8 coordination But I think that it's clarifying
9 that the growth and responsibilities, and I think
10 the two agencies are capable of it.

11 COMMISSIONER LAURIE: Mr. Abelson.

12 MR. ABELSON: Yes, first of all, just a
13 personal note of thanks on your written comments.
14 I did have a chance to look them over briefly this
15 morning.

16 It seems to me that at the core, the
17 difference between your proposal and what staff is
18 floating at the moment is one of emphasis
19 primarily in the management function, function
20 number 2.

21 And the way I see the difference, and
22 I'd like you to tell me whether I'm wrong about
23 this or not, is that staff has elected not to
24 leave the utilities out entirely as a nonprofit
25 management schemewide, but has made them one of a

1 number of perhaps co-equal or roughly co-equal
2 managers, depending on areas where they may have
3 particular expertise and nonconflicts of interest.

4 Your proposal seems to have the
5 utilities primarily, and my question is for how
6 long, the managers with a few what I believe you
7 called, I'm not sure if you used the word pilot,
8 exemptions that the Energy Commission might want
9 to try.

10 And I guess my question to you is
11 twofold. Number one, would you speak to at least
12 briefly the whole conflict of interest perception,
13 which is one of the reasons that many people feel
14 there should be no role at all for the utilities
15 in management. And number two, would you speak to
16 the issue of whether or not your proposal
17 envisioned the utilities in this dominant role for
18 as long as the next set of legislation remains in
19 place. Or is that something that phases down as
20 the pilots prove to be successful?

21 MR. MILLER: Let me first comment on the
22 conflict of interest question. NRDC is concerned
23 about utility incentives. And we participated in
24 proceedings with the PUC on performance based
25 ratemaking for each of the utilities, and

1 strongly -- taken a strong position that their
2 interests should be consistent with lowering the
3 overall cost of service, not with lower rates
4 through increased sales.

5 And we will continue to do that
6 regardless of whether the utilities continue as
7 administrators, because we think that their
8 incentives go far beyond the narrow issue of, you
9 know, immediate administration of energy
10 efficiency programs. There are much broader
11 concerns there.

12 On the narrow issue of program
13 administration, utilities have had, under the rate
14 freeze, an incentive to increase sales to insure
15 the collection of CTC. And we haven't seen any
16 diminution of effort as a result of that conflict.
17 We haven't -- we're in touch with utility program
18 managers and staff on various proceedings in
19 various forms, and we haven't seen that be a
20 problem.

21 And we think that that's something that
22 needs to be watched, but we don't feel that that
23 conflict is evident to the degree that it should
24 be -- the utilities should be taken out of the
25 role. Particularly, given the difficulty of

1 establishing alternate paradigms.

2 MR. ABELSON: My second question was did
3 you see this -- now you have them as the primary,
4 I would say, manager --

5 MR. MILLER: Yes.

6 MR. ABELSON: Do you see that evolving
7 over the period of the next chunk of the program?

8 MR. MILLER: I'm focused on the near
9 term, and if we can get, you know, through the
10 next couple years, let's see how we're doing.
11 Programs have evolved and continue to evolve for
12 many years since they've been in place.

13 And I expect that evolution to continue.
14 The direction it will continue in, I would not
15 predict at this point in time. Let's hope that,
16 you know, I can only encourage you to adopt my
17 model and hope that the pilot efforts, I don't
18 really know why I call them pilot, because it
19 depends on the program, are successful.

20 And if they are, then certainly the
21 possibility of expanding that is something that
22 should be considered.

23 COMMISSIONER LAURIE: Thank you, Mr.
24 Miller. Your comments are appreciated.

25 Mr. Hawiger.

1 MR. HAWIGER: Thank you very much,
2 Commissioners. My comments may be a little more
3 scattered than this morning. This afternoon
4 session has sparked a lot more ideas for thought.

5 Initially -- I'm Marcel Hawiger for
6 TURN, excuse me.

7 TURN was quite pleased to see the staff
8 report and recommendation on the administrative
9 structure. Our primary focus for a number of
10 years has been that the utilities should not be in
11 the administration and program management role for
12 energy efficiency programs. They certainly have
13 the expertise and should have the right to have a
14 role in program implementation and delivery, but
15 we believe that the incentives are such that the
16 counter-incentives utilities have to promote
17 energy sales, make their role in managing energy
18 efficiency highly problematic.

19 And I might as well start at the end
20 there with Mr. Miller's comments regarding those
21 incentives. Certainly I appreciate and TURN
22 supports NRDC's position in the PBR proceedings to
23 make the framework, PBR framework such as not to
24 provide a counter-incentive for energy efficiency.

25 However, the fact is that at least two

1 of the utilities now have a PBR framework in place
2 that does provide a disincentive, because it
3 provides them with incentives to increase sales
4 based on the rate cap model, so they get more
5 money if they increase the sales. That's the
6 reality right now.

7 And as far as in this transition period
8 under the rate freeze, it's difficult to evaluate
9 performance. We can certainly see that the amount
10 of funds that have been expended by the utilities
11 on energy efficiency has been much lower than the
12 amount of funds authorized.

13 Now certainly there have been a lot of
14 other problems with the programs in the past two
15 years due to their various difficulties in the
16 transition, so I can't stand up here and say for
17 sure that it's one incentive or another that's
18 driving them.

19 But I think that there is certainly
20 evidence that the utilities are not promoting and
21 pursuing energy efficiency to the level that they
22 are authorized to do so in their rate cases.

23 Now, I think we would very much support
24 the structure with the governance and program
25 management as in table 1 that does not include the

1 utilities in those two roles.

2 We don't necessarily have any
3 preconceived notion or position on the nonprofit
4 versus the CEC, that's not been an area where
5 we've really delved into the issues deeply.

6 I think just -- I only had the
7 opportunity today to look at the NRDC proposal.
8 We would not absolutely rule out the possibility
9 of the utilities should be allowed to bid for the
10 program management role, although our preference
11 would be to have them only in the implementation
12 and delivery.

13 But it appears to me, looking at this
14 proposal, that it really maintains the status quo.
15 And I would disagree somewhat with the
16 characterization that it's just a change in
17 emphasis. This program says -- the NRDC's
18 proposal says utilities will continue to be
19 responsible for the majority of the program
20 management function, including et cetera, et
21 cetera, et cetera.

22 And apparently it will not be
23 contractually determined with the CEC, but will be
24 based simply on funding, approved funding level
25 with performance incentives set by the CEC.

1 Basically this is exactly the same
2 structure we have now, except that the CEC will
3 have somehow assumed regulatory oversight
4 responsibility to set incentive levels as is done
5 currently by the PUC.

6 It seems to be a very different model
7 from a model of going to private contracting
8 agency that has contractual relationships with
9 program managers.

10 And I have serious concerns about that,
11 though certainly I'd like to look at this proposal
12 and think about it a little more.

13 I would note another document which
14 appeared today was the summary by Mr. Goldstone.
15 And looking at it it seems to provide a lot of
16 valuable practical suggestions based on previous
17 comments on the nature of the program management
18 function, whether by the CEC or another agency.

19 And I find that it's especially helpful
20 in its idea that one should not have
21 micromanagement, but one should set very
22 identifiable, clearly articulated standards for
23 evaluation.

24 This is where TURN believes the CEC or
25 some independent body has to play an essential

1 role in doing the program and market evaluation,
2 box number 4. The utilities or whoever is
3 actually the program manager should not be
4 evaluating their own program. Especially in the
5 context of what I said this morning about benefits
6 of the programs and who shares in the benefits and
7 who pays for the programs.

8 We believe it is essential that there be
9 clearly articulated goals for these programs, that
10 those be evaluated by the -- whether it's the CEC
11 or some independent body. I think the CEC would
12 be, it would be -- could play a valuable role in
13 performing that program and market evaluation
14 function.

15 I believe that that concludes my remarks
16 on the administration issue. Thank you very much.

17 COMMISSIONER LAURIE: Thank you, sir.
18 Questions?

19 MR. WILSON: Marcel, you may not be the
20 best person to ask this question, but since you're
21 there I'll ask you. Maybe some other people want
22 to answer this, as well.

23 Regarding the conflict with UDCs and
24 their role as regulated companies, does it make
25 any sense for the DSM activities to move to

1 utility affiliates, does that mitigate any
2 problems?

3 MR. HAWIGER: Are you talking about the
4 program management or the implementation --

5 MR. WILSON: Program management.

6 MR. HAWIGER: Program management.

7 MR. WILSON: Or implementation.

8 MR. HAWIGER: I think yes, we would not
9 preclude utility affiliates from bidding for
10 program management function. Primarily because
11 they do not have the built-in regulatory
12 disincentive. They're not providing the delivery
13 service of the energy where through the regulated
14 ratemaking process they have an incentive both to
15 increase their sales, and potentially they might
16 have incentives to provide cross-subsidies.

17 The affiliate, while there may be issues
18 of cross-subsidies that I would like to reflect on
19 a little more, but they don't have that inherent
20 disincentive for energy efficiency.

21 Now, certainly the parent company might.
22 There might be some conflicts there since one of
23 their affiliates is the utility. And those may
24 need to be thought through out a little more.

25 COMMISSIONER LAURIE: Thank you. CALEP,

1 please.

2 MR. WALERCZYK: Good afternoon. Yes, my
3 name is Stan Walerczyk with CALEP, California
4 Association of Lighting Energy Professionals.

5 What I just passed out was by the
6 administrations, and so I really won't talk about
7 that. But I did want to talk about this, I know
8 the CEC is the sponsor of Vision 20/20. And with
9 market transformation I just hope the
10 administration process uses some of the Vision
11 20/20 principles.

12 Because energy efficiency has been
13 pushed now in this state for over a decade. And
14 just trying to save money on kilowatts and
15 whatever only gets us so many people. And if you
16 can be a focus on things like increased
17 productivity and increased sales by energy
18 efficient lighting and better quality, I think we
19 have a lot better chance of really transforming
20 the market than just focusing on rebates or SPCs.

21 And that'll do it for me.

22 COMMISSIONER LAURIE: Thank you, sir,
23 very much. Questions? Thank you.

24 Mr. Rufo, please.

25 MR. RUFO: Mike Rufo from Xenergy. I

1 just want to make a few points and I guess
2 disjointed is the theme for the day. I've got my
3 comments mixed up from this morning, trying to
4 organize them into the -- separate the funding
5 from the administrative structure questions.

6 Just a couple quick prefaces for my
7 comments in terms of context for my firm. We're
8 currently involved in both the measurement and
9 evaluation functions in California, market
10 assessment evaluation.

11 We evaluated the 1998 standard
12 performance contract program, the nonresidential
13 program. We've done a number of impact
14 evaluations over the years.

15 We've also involved with implementation
16 of programs. We run an energy, residential energy
17 information program for all three IOUs, electric
18 IOUs.

19 In addition we currently do about \$1
20 million a year in a proprietor research product
21 that's focused on retail energy markets in which
22 we study customer switching behavior in all the
23 restructured markets in the country.

24 Unfortunately, our activity in
25 California has wound down. We can't seem to get

1 any western region clients interested in this
2 multiclient because the retail markets, at least
3 the mass markets, are fairly dead. And I'll make
4 reference to that in a moment.

5 Just want to give you that background in
6 case you have any questions about the relationship
7 say, between retail energy markets and the energy
8 efficiency programs.

9 The first point I wanted to emphasize,
10 and I really don't need to emphasize it very much
11 because it's been brought up a lot more today than
12 I thought it might be, is the contracting process.
13 In fact, that's kind of the thing that brought me
14 here today.

15 When I look around I don't see a lot of
16 other -- very many private sector firms at the
17 meeting today, and it makes me wonder if they're
18 all smarter than I am in terms of where they're
19 spending their resources.

20 But, I think one thing I wanted to say
21 is that we really don't have any preferences in
22 terms of these administrative structures. What
23 we, and I think a lot of other firms who aren't
24 here, would say if they were here, and I can't
25 speak for them, is we want a most value

1 procurement process.

2 Especially when you talk about market
3 transformation, you know, you're really looking
4 for innovation, risk taking, and you need a most
5 value system.

6 We stopped bidding on CEC jobs about
7 five years ago, and the reason was that we believe
8 that the scoring process on many of the contracts
9 was a mediocrity based system in which you take
10 all the bids over 80 points out of 100, and you go
11 with the low bid.

12 So the last time we scored a 97 and lost
13 to an 82, we sort of packed up our tent and went
14 elsewhere.

15 And I know that there's been a lot of
16 talk about that here today. And, in fact, over
17 the years I think that there's been some shifting
18 in that contracting process around these programs,
19 some -- look closer at, but the bottomline is just
20 for us, the litmus test around the administrative
21 structure question is really having a most value
22 procurement process.

23 And to the extent that you can help,
24 that you can flesh that out as part of this
25 process, or that you can work that into the

1 legislation, I think that that's very important to
2 make folks understand that we're not buying
3 pencils here, we're looking forward, you know,
4 really difficult kinds of innovative strategies to
5 transform markets.

6 So that's it on the contracting process.

7 The next point I wanted to make concerns
8 market assessment and evaluation and
9 implementation.

10 And I just want to emphasize that folks
11 not go down a path where MA&E and implementation
12 are rigidly separated, or too rigidly separated
13 across the board.

14 That, in fact there are a number of
15 entities, ourselves being one of them, that
16 benefit by doing both MA&E work and
17 implementation. In fact, one activity supports
18 the other.

19 If you rigidly separate those things I
20 think you lose the complementary of the skill sets
21 that are required to be successful.

22 Now, clearly, you know, we support the
23 premise that you can't self evaluate. So, for
24 example, the programs that we implement for the
25 California utilities currently we're precluded

1 from evaluating those specific programs.

2 But we are engaged in a variety of both
3 MA&E and implementation activities. And really if
4 you look at the private sector models of market
5 research, you really -- I think we do need to
6 actually bring the MA&E process closer to the
7 implementation process in terms of bringing a
8 research-based approach to the implementation so
9 that it's more successful.

10 Now, there are certain areas where you
11 need to separate them completely, but there's a
12 limited population of market actors out there, and
13 as you get into market transformation evaluation
14 you can't go back to one of these market actors
15 over and over and over with different surveys for
16 different functional needs.

17 So I think just being careful not to
18 overly separate MA&E from implementation is
19 important.

20 Also, as the case in Wisconsin showed
21 that sometimes rules can be written in ways that
22 create perverse outcomes by being too rigid.

23 Just wanted to also mention that the
24 work that we've done looking at the California
25 market, both through the nonresidential SPC

1 evaluation and through the multiclient project
2 that I mentioned before, we really haven't seen
3 any real successful bundling of energy efficiency
4 with retail electricity to date anywhere in the
5 country.

6 And particularly in California in the
7 residential to small commercial markets where
8 switch rates are on the order of 1 percent,
9 there's a real need for some kind of innovation in
10 that market to bring more public benefits to those
11 segments, and others have brought that up today.
12 But I think there's been some failures on the
13 restructuring side with respect to the retail
14 electricity market and one of the prefaces, AB-
15 1890 was the energy efficiency, would be
16 stimulated by the retail providers who bundled
17 those services and captured customers through a
18 greater value added package. That hasn't
19 happened. There area a variety of market barriers
20 I think that are behind that.

21 Couple quick points and I'll be done.
22 There was a reference, and I think it was not
23 official to a 5 percent funding level potentially
24 as a cap for MA&E. I think if you look at figure
25 2 and the needs analysis, or the historic analysis

1 that staff did, MA&E was running 10 to 20 percent
2 from 1988 to 1997.

3 In '98 the figure dropped to something
4 closer to 5 percent, and that seems to be partly
5 just because, you know, studies aren't potentially
6 getting out the door.

7 But as the utilities moved more toward a
8 market transformation framework there was some
9 discussion of the last two years that doing MA&E
10 for market transformation would be less expensive
11 than doing impact evaluations.

12 I think that's not the case. It's
13 actually much more complex to do a good program
14 theory based evaluation of a market transformation
15 program. And involves research with many more
16 market actors than the impact evaluation models
17 did.

18 The impact evaluations tended to be
19 expensive because they had a lot of on-site data
20 collection.

21 So we would recommend, you know, MA&E
22 funding level more on the order of 10 percent.
23 And that may be, you know, level detail that's not
24 going to be in the report in either case, but I
25 did hear a 5 percent fee earlier and I wanted to

1 respond to that.

2 The last thing is I think that you
3 should potentially formalize the third-party
4 initiative process more in the administrative
5 structure. So, having the third-party initiative
6 as a box next to the res/nonres and new
7 construction.

8 Because the problem is if we do go down
9 the path of the model, the \$30, 40, 50 million
10 contract to a single entity or three or four
11 entities, that there's going to be a lot of market
12 power that's held by that entity. And then we'll
13 just, you know, it's inevitable that the entity
14 that has the master contract will develop some
15 biases towards trying to maintain all the program
16 functions and all the innovations, themselves.

17 I think a third party, an issue process
18 is going to be critical to kind of keeping the
19 process vital. So I know it's in there, in the
20 plan, as kind of a sub-bullet item, but I think
21 it's important enough to have it as a separate box
22 with a clear funding bin of its own to really kind
23 of keep the process going in between the big
24 bidding processes for the major, the three or four
25 buckets of the main program administrators.

1 COMMISSIONER LAURIE: Thank you, sir.

2 MR. RUFO: That's it.

3 COMMISSIONER LAURIE: Appreciate your
4 comments very much.

5 Mr. Nelson.

6 MR. NELSON: Thank you, Commissioner.

7 Will Nelson, I'm testifying as a private
8 consultant.

9 I'd like to first make a few general
10 comments with respect to the last hour of
11 discussion. The RFP process for the independent
12 administrator that was attempted by the PUC last
13 year didn't fail because of state procurement
14 rules or the state procurement process, per se.

15 I believe John Sugar has it right,
16 basically. PUC is not a procuring agency. It's a
17 rates and regulatory agency.

18 Another major reason it failed is
19 because the PUC was somewhat schizophrenic. They
20 initially envisioned a highly empowered board to
21 conduct a lot of activities for them, and then
22 they changed their mind for a whole lot of
23 reasons, which may be rational or irrational
24 depending on your position.

25 But that was probably the single over-

1 arching reason for the difficulty. But it really
2 wasn't the state procurement process in my
3 estimate.

4 The state procurement may not always be
5 optimal, but we have public procurement processes
6 in this country that are quite effective,
7 particularly if you compare them with some other
8 countries abroad.

9 And when you're looking at large dollar
10 contracts and large market impacts, the state
11 procurement processes may, in fact, be precisely
12 what we want for part of the mix.

13 So I just wanted to say that I'm in
14 substantial agreement with the staff proposal for
15 the agency taking a lead role in this area, for
16 the transfer of general responsibilities and
17 governance responsibilities, and am in general
18 agreement with their multiple administrator
19 approach.

20 I would also point out that the Public
21 Utility Commission, itself, still concludes the
22 independent administrator market structure or
23 model structure is preferred for energy efficiency
24 administration.

25 Now, I have proposed, this morning I've

1 suggested the two tier approach and I agree with
2 Mr. Goldberg who said we really need to be looking
3 to this legislative process, bringing in
4 consensus.

5 I'm already sensing more difficulty -- I
6 knew there would be difficulty, there's been
7 difficulty for four years, but we need more
8 consensus. I believe the two tier approach to
9 providing for the UDC role through their own rate
10 component, through a restricted set of activities
11 is the best approach. And I'll discuss that in a
12 little bit.

13 The UDC role, if you're going to pick a
14 top three of what have been our problems in the
15 last four years to getting up and running, we're
16 so far behind other states, it is that. And that
17 needs to be resolved in a fairly clean way. And
18 we can't muddle along for another year or we're
19 going to have considerably more wastage.

20 So if I could refer you now to the
21 outline on the front page that I submitted today
22 for guiding principles for legislative
23 authorizations, the first point, I strongly
24 recommend that --

25 COMMISSIONER LAURIE: Mr. Nelson, as you

1 go through your process, please time your
2 presentation for seven minutes, please.

3 MR. NELSON: Seven, okay. I had ten,
4 but okay.

5 COMMISSIONER LAURIE: Well, you had ten.

6 MR. NELSON: Oh, seven for the rest?
7 Okay. I think I'm in good shape.

8 I think it's helpful to look ahead to
9 the process the agency will be using, as going
10 down three administrative paths.

11 One of them is the CEC direct contract
12 management, a so-called master contract or a large
13 contract where they're obtaining the services of
14 other experienced and management savvy
15 organizations to do certain functions.

16 The second road is the road I call the
17 road to nonexclusive franchises. Which I will
18 describe as a regulatory compact which waives the
19 need for what will probably result in -- you'll
20 probably be having 100, 150 page master contracts.

21 And I think that's okay. But I don't
22 think that should be the way programs should be
23 run for the next five years or ten years or 20
24 years.

25 So I believe that a nonexclusive

1 franchise method which there is not time to
2 completely explain today, will be a future path in
3 which you use a support payment, support for firms
4 that are out there performing certain services.

5 And then the third path is the UCD role
6 conducting certain restricted services that are
7 more related to their core mission, such as
8 billing services, peak load management, meter
9 configuration, and possibly some inspection and
10 verification roles.

11 Now, I'll come back to this three-path
12 approach at the end.

13 My second recommendation is when you go
14 to the Legislature seek broad authority. Write
15 the language broadly so that you are enabled to do
16 master contracts; you are enabled to draft a
17 charter for a public benefit corporation; you are
18 enabled to draft a charter for a finance
19 authority; you are enabled to make nonexclusive
20 franchise grants.

21 Then as you go down the three paths
22 initially in the year or two ahead, if one of
23 those really catches fire, and it has substantial
24 money and policy implications, you say to the
25 Legislature, we'll be back with the details on the

1 charter for the finance authority, the PBC, or
2 franchise granting. Although at the outset I
3 think you should gain pilot authority for the
4 franchising concept.

5 Third, the reporting and accountability
6 of UDCs, and just for the sake of framing this in
7 your mind, let's say that one-fifth of today's
8 budget goes to this UDC tract, program
9 expenditures, and four-fifths flow through CEC
10 trust accounts.

11 The IOUs will still make their filings,
12 applications and reports to the PUC, and the
13 public utility boards will still have the
14 oversight responsibility for the services in that
15 area.

16 Again, I'll say, as I said this morning,
17 the legislation should provide for certain
18 reporting coordination with the CEC for the IOU
19 programs and the public, we're well past the time
20 when public board utilities should be required to
21 make formal filings and reporting to a state
22 agency on the public moneys they're spending.

23 Fourth point. If you find it infeasible
24 to do a full transfer of all programs from
25 existing investor-owned utilities, you should

1 still do a full contracting authority transfer
2 should still occur as of 1/1/02. In other words,
3 if the UDCs are going to conduct any of the
4 programs or projects or given territories for
5 markets, they should have to execute a master
6 contract with the Commission for that period. And
7 I would limit the UDCs to one one- or two-year
8 period extension. That would be at the discretion
9 of the CEC whether that was on a competitive bid
10 context, or a sole source negotiated basis.

11 Generally I think you should -- you're
12 doing this. I commend you for planning program
13 phasing and development in two-year frames,
14 generally, as you move them from one form to
15 another form.

16 I frankly believe if there was a
17 political will, as one party said today, that all
18 programs could be transferred early in 2002. I
19 see no reason why this agency can't conduct
20 standard performance contract programs. We don't
21 even have them for the residential sector at this
22 point.

23 I see no reason why you can't conduct
24 voucher centers throughout the state for the
25 different customer sectors. I see no reason why

1 you can't contract rebate agents. Some of the
2 rebate agents might be existing agents.

3 I don't see great barriers towards this
4 agency moving ahead. I see this agency as the one
5 of choice to move these programs forward.

6 And just to close I still have a deep
7 concern regarding the public utility board roles.
8 I do believe the CEC may well be crossing a
9 Rubicon of sorts, if it moves these rate
10 components into the state fiscal system and starts
11 expending on clearly public areas like support of
12 codes.

13 I don't see how you can set up walls,
14 for instance, if you have an internet procurement
15 agent, an agent doing both procurement using
16 internet services. Of course, customers in public
17 utility territories are going to make use of
18 those.

19 So I see that as highly problematic. I
20 commend you to take courage and tackle that issue.
21 and bring the public utilities in with the IOUs
22 and everyone to get a consensus bill from the
23 Legislature.

24 MR. ABELSON: Very good, thank you, Mr.
25 Nelson very much.

1 MS. ten HOPE: Can I just ask one
2 question?

3 MR. ABELSON: Quickly, please.

4 MS. ten HOPE: Can you explain the
5 nonexclusive franchise, what that is?

6 MR. NELSON: Let me illustrate with a
7 brief example. Let's say in the residential
8 customer sector California was divided into eight
9 territories. Not based necessarily on the
10 existing UDC service territory lines.

11 And the CEC said to companies out there,
12 you need to provide five target services. We have
13 five measures or types of services that we want
14 provided in order for us to grant you a
15 nonexclusive franchise. You will enter into an
16 agreement with us to do that, but it won't be a
17 contract, as such.

18 This is just an example. The criteria
19 might be that the companies would have to have at
20 least three of those five measures or services in
21 in-house capability, and they could be permitted
22 to out-source two of the others. One of those
23 might be bulk procurement, services procurement of
24 energy efficiency appliances, just as an example.

25 Another one might be auditing or site

1 assessment functions, bill analysis functions.

2 They're awarded geographical
3 nonexclusive franchises. In other words, if
4 someone else wants to offer audit services of
5 those type of services, they're not restricted
6 from doing so.

7 The hook for the company to bid on this
8 is they get a support payment for every customer
9 that they can demonstrate that they've provided
10 XYZ, AB service to in a given time period. It's
11 very auditable. I believe it's a useful direction
12 to experiment with.

13 MS. ten HOPE: Thank you.

14 COMMISSIONER LAURIE: Thank you very
15 much, Mr. Nelson.

16 MR. NELSON: Thank you.

17 COMMISSIONER LAURIE: I'm sorry, Mr.
18 Berman.

19 MR. BERMAN: Thank you, Commissioners
20 and Staff. I'm Mark Berman with Davis Energy
21 Group.

22 I have a concern and my concern is we're
23 talking about the details of administrative
24 structures and measurement and evaluation, et
25 cetera, et cetera. My concern is that we might be

1 rearranging and then rearranging again the deck
2 chairs on the Titanic.

3 I think we have to keep in focus the
4 number one priority, it's not the only, but the
5 number one priority is to extend the public goods
6 charges. Because without that none of this
7 discussion amounts to anything.

8 And I think just about everybody in the
9 room would agree that good things are being done
10 with the public goods funds. They should be
11 extended. More energy efficient technology is
12 there to be developed, and much energy efficiency
13 technology is there and is under-utilized.

14 So we're talking about a good thing that
15 we're doing. We want to continue doing it. But I
16 think Lenny Goldberg said it very well, and others
17 have agreed with him, the best assurance of
18 continuation is some sort of consensus.

19 We need to be able to go to the
20 Legislature pretty much arm-in-arm and say, good
21 things have been done, here are the results. We
22 need to continue this for the State of California.

23 And I think there have been some
24 proposals, one in particular today that is a good
25 foundation for a consensus. And I would suggest

1 that your job now is to look for that consensus.

2 The current utility structure and the
3 current utility programs are producing results.
4 If we're not able to say that, our cause is lost.
5 And I think we can truthfully say that they are
6 producing results.

7 If you'd like to see some of those
8 results, I invite you to come to a public forum at
9 the Stockton Energy Center October 21 from 9:00 to
10 12:00 when our firm will present the results of a
11 third-party program that we've been running for
12 the last two cooling seasons called the home
13 cooling program.

14 And I think we have some good results to
15 show. And it's just one example. And if you
16 don't think so, come and tell us, that's fine,
17 too.

18 Perhaps these results are not being
19 produced as efficiently as they could be. Many
20 people seem to want change, and therein lies a
21 dilemma. This is a complicated business, it is a
22 big task, it's not clear what structure would work
23 better.

24 It is clear that if poor decisions are
25 made we could take something that's working and

1 turn it into something that doesn't work, and have
2 a disaster on our hands. So there's some risk to
3 making changes, and I think you feel that
4 strongly.

5 And therefore I think Peter Miller's
6 proposal is an excellent one. Because what it
7 says is let's build on the momentum that we've got
8 now. Let's take advantage of the utility
9 experience and the utility knowhow that is
10 producing results today, and let's also create a
11 mechanism to try at least one, if not more, new
12 approaches.

13 For example, the Energy Commission
14 directly contracting with program administrators
15 or an administrator for one or two or five
16 programs. And let's see how it works.

17 Let's inject, and I think the
18 Legislature would like this, as a businessman I
19 know I do, let's inject some competition into this
20 system. So, yes, the utilities move forward, and
21 at the same time the Energy Commission moves
22 forward in a slightly different way.

23 And maybe there's the latitude for a
24 third way to be attempted. And I think that's
25 already been started in a sense, and it's the

1 third-party proposals.

2 There are a lot of folks out there that
3 are capable of running small to medium-sized
4 programs and have a lot of good ideas and we
5 should tap into them as the utilities have started
6 to do, but it's not been done a lot.

7 And then with time and with experience
8 if we find that there are better ways, the Energy
9 Commission is there in a position, as the
10 governance body, to make a shift from 90 percent
11 utilities 10 percent other, to 70/30 or whatever
12 is appropriate.

13 One specific suggestion, and this has
14 been echoed by others -- I guess I'm the echoer,
15 but the third party initiative. I did not see it
16 on table 2, which was Energy Commission sets
17 policy overall budget for nonprofit
18 administrators. It seemed to have fallen out of
19 the principal duties section there.

20 I do think that that is a good mechanism
21 for injecting competition, getting new ideas in.
22 I think the third-party initiative needs to be in
23 here someplace.

24 Of course, having taken advantage of it,
25 and I believe successfully, I might be biased.

1 But I don't think so. I think when you talk with
2 others we're not the only ones that think that's a
3 good idea.

4 So, in sum, I think it's time to look
5 for consensus, it's time to build a consensus.
6 We've got a great story to tell, and I think we
7 need to make sure that that rings true to the
8 Legislature, and that we take care of task number
9 one and get these programs extended. And also do
10 it in a way that gives some life to it so we
11 can -- more life to it, more flexibility, so we
12 can evolve with time without having to go back to
13 the Legislature and ask for permission to switch
14 from this mechanism to that.

15 Thank you.

16 COMMISSIONER LAURIE: Thank you, Mr.
17 Berman, very much.

18 Now, I'd ask you to do that as a
19 sidebar, Mr. Abelson. Thank you.

20 Mr. Ely, please.

21 MR. ELY: Thank you, Mr. Commissioner.

22 I have again some sort of high level
23 thoughts. Earlier this morning I spoke to you as
24 an economist. This afternoon very briefly for a
25 change I thought I would start as an engineer.

1 When an engineer designs a system to
2 accomplish something, say an amplifier, a chemical
3 system to make gasoline, he designs it to go flat
4 out, to make as much amplification, as much
5 gasoline as he possibly can. He immediately comes
6 in with the feedback system based on some
7 measurements.

8 So that when he ends up building the
9 system that produces gasoline or amplification or
10 almost anything, including growth in children, if
11 we can divert, there's really a design, a go-for-
12 it, and at the same time there is a measurement
13 and feedback that is absolutely paramount in the
14 process.

15 When you're designing a program as an
16 engineer, you're designing a process or even a
17 biological system, the amplification, the push,
18 the push to get the programs out, the excellent
19 work done here by Mr. Sloss in setting up a
20 structure to get all this done, is the easy part.

21 The hard part is to design the
22 measurement and the feedback. And it is
23 absolutely critical to make any of those systems,
24 whether it's biological, chemical engineering, in
25 fact also economic, electronic, any kind of system

1 to know whether or not you're doing a good job,
2 you have to have a measurement part of it, and a
3 feedback part of it.

4 The feedback really comes in two parts.
5 One, it has to have enough control to be able to
6 modulate the system, to modulate whatever it is
7 you're trying to do, and it has to be based on
8 some sort of measurements.

9 As this morning, I'm again Johnny One
10 Note on somehow somewhere you've got to have some
11 measuring. But I think my emphasis this
12 afternoon, I'd like to, since we're talking about
13 administrative structures, is to focus on the
14 little box on the left there, that independent
15 review.

16 That looks exactly like an engineering
17 diagram. It's the feedback channel, if you will,
18 in the system. That's where the design effort
19 should go.

20 Anybody can criticize, the utilities,
21 the regulatory process, the CEC, the CEC's
22 process, it is very hard to sit as we are now and
23 ask how do we design a system to correct, to self
24 correct, to know when we're wrong.

25 It's very easy to sit and say I know how

1 to run a program, I think I know how to design a
2 program that will run. It's a lot more sort of
3 difficult on a personal level to say I'm really
4 imperfect and we really screw up a lot. And what
5 we need is some other feedback type mechanism,
6 some other entity, an agency, a Galbraithian
7 countervailing power, if I could slip over into
8 economics, that will force us back into track.

9 In your design, Messrs. Commissioners,
10 in your design of a system I hope you will focus
11 far more on the correcting feedback agency and how
12 you can set that up to be politically viable,
13 because that's what's going to make you strong.

14 It is the lion that makes the elephant
15 strong. It's the lion that makes the wildebeest
16 strong. Is the wolf that makes the deer strong.
17 That's what you need. You need, if you're going
18 to design, if you want to be a strong program, if
19 you want to be a strong agency, then you should
20 focus much more on the corrective mechanisms, the
21 corrective elements than on the original.

22 On a separate note, since I am here, and
23 also have been the beneficiary of third parties,
24 I'd like to pick up on another odd things.

25 The MA&E process and the contractual

1 process produces kind of a tautology wherein if
2 you do a program and have an MA&E process that
3 evaluates it successfully you're complete.
4 There's no reason for any new ideas.

5 And just as in an engineering system you
6 often add what's called boltsman noise or outside
7 noise to a system to keep it preventing from
8 finding local maximums instead of global maximums.

9 So be it here. You want a third-party
10 process that makes everybody uncomfortable, that
11 keeps pushing us off of our little, the MA&E
12 process that we're perfect. We've done it right.
13 There are no other solutions. We have to prevent
14 that kind of stagnation.

15 And so just as you have to have a strong
16 feedback mechanism to design an effective process,
17 you also have to build into it noise,
18 opportunities for new ideas, opportunities for new
19 programs, the dirty messy research experimental
20 end of it.

21 Thank you very much.

22 COMMISSIONER LAURIE: Thank you, Mr.
23 Ely. Thank you, sir.

24 Any additional input? Yes, Mr.

25 Chouteau. And we appreciate your written comments.

1 MR. CHOUTEAU: Thank you. Since we did
2 submit a proposal, I thought I might just comment
3 today that our proposal was essentially to have an
4 existing regulatory structure with the Energy
5 Commission in governance, and the Energy
6 Commission with the role in evaluation. But the
7 utilities continuing to provide the programs.

8 And what I wanted to say is I agree with
9 the comments earlier that at some point we need to
10 converge, I think, to be successful going forward.

11 And I just want to express my openness
12 to some of the new ideas that Peter Miller has
13 introduced that are different than the ones that
14 we introduced, and my openness to explore that
15 with the Commission and with Peter.

16 Certainly our proposals are not
17 identical and having the CEC and the utilities
18 both in the role of program managers is quite
19 different, but I just wanted to express that I'm
20 open to that.

21 The second thing is it's been brought up
22 today that the overall concern about utilities
23 having a kind of sell-versus-save conflict. And
24 this has come up time and time again in this
25 proceeding.

1 And it's very clear that there's at
2 least a perception that that's a problem. And all
3 I can offer is that in the years that I've been
4 managing this function for the utility, as we
5 looked at the question of whether to stay in this
6 business, I felt like I've been in the role of
7 selling these programs. And I happen to believe
8 these programs are a good thing.

9 I felt like my toughest audience has
10 been internal to the company, my own management.
11 And at least that, for me, was the toughest test
12 when we went forward in the restructured
13 environment and the Commission, the Public Utility
14 Commission, put a lot of pressure on the utility
15 to get out of this business.

16 They stated very clear their intent in
17 the beginning to have an independent
18 administrator, not that the utility couldn't bid,
19 but that they were going to put this out for
20 independent bid.

21 The question came up internally, you
22 know, when I came before my management, you know,
23 should we be in this business. And that's where I
24 would expect the sell-versus-save argument to come
25 up. I would expect if there is a conflict for the

1 utility, you know, to put pressure on me and say,
2 well, why should we do these energy efficiency
3 programs if we want to sell.

4 But that wasn't the issue. In fact,
5 when we looked at it, it was clear that these
6 programs were going to go forward. That whether
7 we did them or somebody else did them, you would
8 save kilowatt hours, and sales would be affected.

9 So, really the choice the utility had
10 was whether to participate or not. Not whether to
11 stop this from happening. Because this will
12 happen.

13 And, in fact, when we looked at it and
14 discussed it internally, it made sense from our
15 customers' point of view for these programs to go
16 forward. Even if it meant reduced sales, it meant
17 the right kind of sales for customers.

18 And as anybody who has customers knows,
19 I mean that's what determines your success, is
20 whether the customer is satisfied with the
21 product.

22 So when we looked at it there wasn't
23 really a choice about sell-versus-save. There was
24 a small concern that we would do it better than
25 other parties, so you would actually save a little

1 more. But that --

2 (Laughter.)

3 MR. CHOUTEAU: -- you know, that was
4 pushed aside when people looked at the one, the
5 customer argument, and two, the potential this had
6 as a business. This was a good business to be in.

7 And that's how we answered it
8 internally, you know, that's where we are today,
9 and that's why I get confused when this issue
10 keeps resurfacing.

11 I'm not confused that it's a perception,
12 because it's clear that it is, I mean, you know,
13 people don't bring it up if it wasn't a perception
14 that this is a problem. But I have to say from my
15 view, having managed these programs and dealt with
16 the issues internally to the company, this isn't
17 the big issue.

18 Thanks.

19 COMMISSIONER PERNELL: I have a
20 question. First of all, thank you for your
21 written comments, and I was just waiting to talk
22 to someone from the utilities. But you've
23 answered most of those.

24 I just have one additional question, and
25 that goes to Mr. Goldberg's contention that Davis

1 is putting a lot in and not getting anything out.

2 So my question to you is whether or not
3 as this process goes forward, and if the utilities
4 are still involved, whether or not you would be
5 doing some additional reaching out to those local
6 agencies or councils or supervisors to see that
7 they get some benefit from this public goods
8 charge that they're being charged.

9 MR. CHOUTEAU: I see our role as
10 effective administrators in reaching out and
11 finding the best way to accomplish these programs,
12 given the overall guidance we get from the
13 governance body.

14 And in the past it was very simple
15 resource acquisition, kilowatt hours, very easy to
16 measure. So we went out and found, given the
17 other guidance of equity, we found the best -- the
18 easiest way to get a kilowatt hour as we could,
19 the best way to accomplish the goals.

20 So, in the future I would expect us to
21 continue to perform that way. Given a certain
22 goal we'll find the best way to do it. And if a
23 goal is -- if it's clear that it's easier to
24 achieve the goal by combining with local entities,
25 or finding ways for local entities to participate

1 in larger numbers, then I would see us doing that.

2 And, in fact, we've begun that kind of
3 exploration already under the current programs. I
4 don't think in the current structure we have an
5 inherent interest in shutting out people who have
6 good ideas.

7 I think, as any organization, we have a
8 certain momentum, and so people with new ideas
9 need ways to get our attention. But I think we've
10 started to work on several processes that make
11 that happen. And I think we can get better at it.
12 I think there's no question that we can be better
13 at it.

14 Like any large organization, you know,
15 like the Commission, itself, we have things that
16 make us slower. We have our own institutional
17 memory to deal with and our own prejudices, but I
18 think our intent as an administrator is to find
19 the most effective way to deliver the programs,
20 given the goals that are set for us. And I think
21 we can do that.

22 COMMISSIONER PERNELL: Thank you, Chris.

23 MR. MESSENGER: Can I ask him just one
24 question?

25 COMMISSIONER LAURIE: Is it particularly

1 germane, because you have minus two minutes to
2 make the staff summary, Mr. Messenger.

3 MR. MESSENGER: I can do it outside.

4 COMMISSIONER LAURIE: Make it quick.

5 Mr. Sugar, -- I'm sorry, does anybody
6 else who are not subject to our own time
7 constraints wish to comment on the administrative
8 structure?

9 Thank you. Mr. Sugar, could you take
10 two minutes and indicate next steps, please?

11 MR. SUGAR: First, I'd like to thank
12 everyone who has come and spoken. This is very
13 helpful to us. If you have written comments,
14 please get them in by the end of the week.

15 We are going to take this material, go
16 back to our warren of cubicles and look it over
17 and try to incorporate the comments and the
18 thinking in what we're doing.

19 If you can get comments to us by the end
20 of the week we'd very much appreciate it. We'll
21 try not to ignore material that comes in later to
22 staff, but it becomes more and more difficult for
23 us to incorporate and to digest the material as it
24 gets closer to our deadline.

25 We anticipate having a draft out very

1 early next month for review. And that will be
2 heard at a Committee hearing in mid November.

3 If you have questions please feel free
4 to give me a call. If you have suggestions,
5 please feel free to give me a call. If there are
6 questions or issues on public involvement, please
7 speak with either Maxine Botti or Don Kazama.
8 They've orchestrated this and I'd like to thank
9 them again for an excellent effort.

10 MS. ten HOPE: Is the next hearing date
11 already set so we can make sure people know when
12 that is.

13 MR. SUGAR: It's November 16th is going
14 to be the hearing.

15 COMMISSIONER LAURIE: Now the draft
16 document will reflect the policy decisions made by
17 the Committee, and the Committee consists of
18 Commissioner Pernell and myself, with input.

19 Formal Commission action, of course,
20 will not take place until subsequent to the
21 publication of the draft. You will all get a shot
22 at the draft document. And that's right, there
23 will be another Committee hearing on the actual
24 draft document.

25 The Committee has not, as yet,

1 considered the discussion as presented today. It
2 will. And our thoughts will be reflected in the
3 draft document.

4 Commissioner Pernell, did you have any
5 closing comments at this moment, sir?

6 COMMISSIONER PERNELL: I just want to
7 thank everybody for a very long productive day.

8 COMMISSIONER LAURIE: And thank you,
9 Commissioner. Anybody else?

10 MR. MESSENGER: I just want to say --
11 (Laughter.)

12 COMMISSIONER LAURIE: Yes, Mike.

13 MR. MESSENGER: I think there's one
14 important point that's been raised that I would
15 hope that we could talk with the Committee about,
16 and maybe get feedback to the rest of the audience
17 as quickly as possible.

18 At least two people have come forward
19 and said we think that we should try to develop a
20 consensus proposal. And if you think that's an
21 admirable goal, or if you want us to pursue that
22 as opposed to continuing our current mode, which
23 is just analyzing and giving you a recommendation.

24 It would be useful to me, at least, to
25 know that within the next couple of weeks, because

1 I do think it's possible for us to do that.

2 COMMISSIONER LAURIE: Well, you know,
3 Commissioner Pernell and I are the new kids on the
4 block in this issue. Most of you have been around
5 for years, and there ain't been no consensus that
6 I've seen.

7 (Laughter.)

8 COMMISSIONER LAURIE: There's a lot of
9 money at stake, to the extent that people are
10 happy by the decision, I think that's great. The
11 Legislature will be making some decisions. We are
12 not inclined to be making recommendations to the
13 Legislature that we know will not be acceptable.

14 I don't know exactly what that means.

15 (Laughter.)

16 COMMISSIONER LAURIE: But we're not as
17 dumb as we look. Is that what I mean?

18 Okay, we understand. And certainly to
19 the extent that any conversation can take place
20 between affected parties, between affected parties
21 and staff, I encourage that. No problem. Okay.

22 And thank you very much.

23 (Whereupon, at 4:07 p.m., the workshop
24 was adjourned.)

25 --o0o--

CERTIFICATE OF REPORTER

I, VALORIE PHILLIPS, an Electronic Reporter, do hereby certify that I am a disinterested person herein; that I recorded the foregoing California Energy Commission Workshop; that it was thereafter transcribed into typewriting.

I further certify that I am not of counsel or attorney for any of the parties to said Workshop, nor in any way interested in the outcome of said Workshop.

IN WITNESS WHEREOF, I have hereunto set my hand this 15th day of October, 1999.

VALORIE PHILLIPS
